The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Consider the Draft Plan as written ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet these do not prevent the application being considered. No demand for housing in Marske, as there are lots of properties for sale. Proposals would impact upon local distinctiveness. Traffic and congestion would be increased. Proposed development is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The proposed development would not allow people to live closer to their place of work, shops and services, therefore the development would add to congestion. Plan does not prioritise development on previously developed land. Proposals would harm Marske district centre. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land close to a nearby wooded area. Proposal will not protect and enhance Strategic gaps between Marske and New Marske; Marske and Saltburn, and the green wedges in the conurbation. Population is declining and is a high unemployment rate. No plan to create jobs in advance of the housing. Local services would be put at risk. High density housing is not appropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

Object to development for the following reasons: its ineffective as it does not stop the application being considered; there is no housing demand; impact on village character; traffic; flooding; brownfield sites should be used first; there is no enough jobs; impact on biodiversity, geo-diversity, impact on strategic gap, impact on local services; and the high density proposed is not appropriate.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Consider the Draft Plan as written ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet these do not prevent the application being considered. No demand for housing in Marske, as there are lots of properties for sale. Proposals would impact upon local distinctiveness. Traffic and congestion would be increased. Proposed development is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The proposed development would not allow people to live closer to their place of work, shops and services, therefore the development would add to congestion. Plan does not prioritise development on previously developed land. Proposals would harm Marske district centre. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land close to a nearby wooded area. Proposal will not protect and enhance Strategic gaps between Marske and New Marske; Marske and Saltburn, and the green wedges in the conurbation. Population is declining and is a high unemployment rate. No plan to create jobs in advance of the housing. Local services would be put at risk. High density housing is not appropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement.

Agree with section?: No

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Object to development for the following reasons: its ineffective as it does not stop the application being considered; there is no housing demand; impact on village character; traffic; flooding; brownfield sites should be used first; there is no enough jobs; impact on biodiversity, geo-diversity, impact on strategic gap, impact on local services; and the high density proposed is not appropriate.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. Comment summary:

Object to development for the following reasons: its ineffective as it does not stop the application being considered; there is no housing demand; impact on village character; traffic; flooding; brownfield sites should be used first; there is no enough jobs; impact on biodiversity, geo-diversity, impact on strategic gap, impact on local services; and the high density proposed is not appropriate.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement.

Comment summary:

Consider the Draft Plan as written ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet these do not prevent the application being considered. No demand for housing in Marske, as there are lots of properties for sale. Proposals would impact upon local distinctiveness. Traffic and congestion would be increased. Proposed development is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The proposed development would not allow people to live closer to their place of work, shops and services, therefore the development would add to congestion. Plan does not prioritise development on previously developed land. Proposals would harm Marske district centre. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land close to a nearby wooded area. Proposal will not protect and enhance Strategic gaps between Marske and New Marske; Marske and Saltburn, and the green wedges in the conurbation. Population is declining and is a high unemployment rate. No plan to create jobs in advance of the housing. Local services would be put at risk. High density housing is not appropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Object to housing on greenfield sites in Redcar and Marske because we don't need more houses - no infrastructure to support what we have now.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Consider the Draft Plan as written ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet these do not prevent the application being considered. No demand for housing in Marske, as there are lots of properties for sale. Proposals would impact upon local distinctiveness. Traffic and congestion would be increased. Proposed development is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The proposed development would not allow people to live closer to their place of work, shops and services, therefore the development would add to congestion. Plan does not prioritise development on previously developed land. Proposals would harm Marske district centre. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land close to a nearby wooded area. Proposal will not protect and enhance Strategic gaps between Marske and New Marske; Marske and Saltburn, and the green wedges in the conurbation. Population is declining and is a high unemployment rate. No plan to create jobs in advance of the housing. Local services would be put at risk. High density housing is not appropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. Comment summary:

Consider the Draft Plan as written ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet these do not prevent the application being considered. No demand for housing in Marske, as there are lots of properties for sale. Proposals would impact upon local distinctiveness. Traffic and congestion would be increased. Proposed development is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The proposed development would not allow people to live closer to their place of work, shops and services, therefore the development would add to congestion. Plan does not prioritise development on previously developed land. Proposals would harm Marske district centre. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land close to a nearby wooded area. Proposal will not protect and enhance Strategic gaps between Marske and New Marske; Marske and Saltburn, and the green wedges in the conurbation. Population is declining and is a high unemployment rate. No plan to create jobs in advance of the housing. Local services would be put at risk. High density housing is not appropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

This policy provides a detailed indication of the development aspirations for the strategic site at Marske Inn Farm. The intention to provide a major mixed use development scheme (part a.) supported by a strategic masterplan, can in principle be supported as a coordinated mixed use scheme should help to deliver a more sustainably accessible development and reduce the need to travel. However, the delivery of 1000 dwellings is significant and while relatively distant from the SRN, it has the potential to impact on the SRN. The Agency has been consulted on this site as a formal planning application. The Agency has undertaken a full review of the development proposals with regards to its impact upon the SRN. The Agency has subsequently formally responded to the application with no objections. It should be noted that the application has an impact upon the SRN but it is deemed to be accommodated within existing capacity on the network and should not have any adverse effects upon the safe operation of the network and its junctions. Assuming that this application passes through planning committee then it will then be taken into account as a committed development within the Agency Strategic Infrastructure study.

Officer response:

Comment noted.

Comment summary:

Sites H3.1 and H3.2 have been identified as strategic sites, each delivering 1,000 residential units and supporting services. Natural England note H3.1 is located within 3.4km from Teesmouth and Cleveland Coast SPA and Ramsar. Furthermore H3.1 borders the A174 and although the site is well served by public transport (bus and train); housing development is likely to lead to an increase in reliance on the private car.

Officer response:

The policy already recognises that the site is located within 5km of the Teesmouth and Cleveland Coast Special Protection Area and therefore development proposals will be required to undergo a screening exercise to determine the need for an Appropriate Assessment. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport.

Comment summary:

I am not against the Development, I think it could be good for the Town, however have concerns about flooding, increased traffic, proposed four storey buildings, and the phasing of the development, which is over too long a time period. There are many negatives being expressed about this development but there are also many positives, providing footpaths under the railway bridge and increased trade is but two.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses

within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. The design of the proposals will be considered at the planning application stage. The phasing of development provides a realistic timeframe for the delivery of this large strategic allocation based on housing market conditions and the developers building capacity. As well as typical build-out rates, phasing reflects the need for enabling infrastructure investments at different stages of the development cycle, particularly as a scheme on this scale is likely to be implemented over several phases. However, the phasing is purely indicative and the development could be delivered quicker should market conditions dictate otherwise.

Comment summary:

I would like to record my objections to this proposed project, it is totally out of keeping with a small village like Marske. There are enough problems with traffic at the junction of Longbeck Road and Redcar Road as it is without adding hundreds more cars on to it, have any councillors tried getting out of Churchill Road onto Redcar Road when the schools turn out? it takes forever now without adding to the congestion with more traffic. Also there are already two petrol stations on Longbeck Road do we really need another, the pubs and hotels in Marske are already struggling to get customers without another one. it seems to me there has been little thought about the impact this grotesque development will have on our village and on residents. Concerned resident.

Officer response:

The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. Comment summary:

I object to the plans to build houses at Marske Inn farm for the following reasons the plans would totally spoil the village of Marske creating the start of an urban sprawl the strain on the infrastructure would be too much for the present system the planned houses , buildings and roads would cause a significant reduction in the lands ability to soak away rainfall ,increasing the risk of flood to the village Are there not any brownfield sites that could be used for the development rather than using a greenfield site? There are other sites in the area with approved planning permission for houses that have not been built on indicating there is not a requirement for new houses in the area. Significant new employment is required to attract new people and create new housing needs. I have lived in Marske for about 27 years and feel that its character could be irratrevably spoilt by excessive over development .

Officer response:

The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base

taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked.

Comment summary:

I would like the council to stick to residential development limits as specified in the local plan. I would like the council to develop additional housing that is in keeping with development already in the area i.e height of buildings, % increase in local population rise. I am also worried about the effect of run off water flooding if no new consideration (that will actually work) is taken for disposing of such water. I also dispute the figures quoting the need for 270 extra houses per annum. 2001/2011 census shows an increase of 1900 house holds over the period.

Officer response:

The development limit boundaries are being reviewed as part of the process of updating the Local Plan. The existing development limits boundary would be amended to include the site within development limits. The amendment to development limits formed part of the consultation on the Local Plan. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. The design of the proposals will be considered at the planning application stage. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. Section/Policy**Policy H 3.2****Low Grange Strategic Site****DLP1264****Full Name:** England & Lyle
(private clients)**Organisation:****Agent Name:** Mr Ian Lyle**Agent Organisation:** England & Lyle**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Given the lengthy timescale that it has taken to deliver the small number of dwellings on Low Grange Farm to date, and the fact that the Council is only assuming the delivery of 50 dwellings on this site by 2018/19, we would question the Council's assumption that in subsequent phases of the plan that the rate of housing delivery on this site will be up to three time higher than current rates. There can be very little confidence in such assumptions and as a result it is recommended that the Plan adopt the following delivery trajectory for this site: 14/15 - 18/19:50;19/20 - 23/24: 75;24/25 - 28/29: 75 Post 28/29:800 We consider that Low Grange Farm will therefore only deliver some 200 dwellings over the plan period and not the 310 suggested in Draft Policy H3.2.

Officer response:

Development of the site is a key Council priority and there is developer interest in the site. This has influenced the suggested phasing where it is envisaged that this site will be built out gradually. The projections also take into account the existing development at High Farm and the allocation of the former Town Hall site in the wider area when calculating delivery rates across the period. The phasing also takes into account the need for enabling infrastructure requirements. It is therefore considered that the suggested build rate is appropriate.

DLP712**Full Name:** Lucy Mo**Organisation:** Environment Agency**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Located within the north west corner of the proposed site allocation is a historic landfill site. The site was known as the Bolckow Terrace landfill and was in operation between 1978 and 1985. The site accepted a variety of non-hazardous, non-flammable industrial wastes and inert non-flammable wastes. It also accepted 'difficult' wastes which may have included more problematic wastes such as oily wastes and asbestos. The site was also permitted to accept construction wastes which may contain significant amounts of wood and other materials which may generate landfill gas. The Environment Agency has no monitoring information regarding this site, although the presence of landfill gas should be anticipated. A comprehensive risk assessment and ground investigations should be undertaken if development is to take place on or adjacent to this historic landfill site. We would also welcome the inclusion of text which encourages opportunities for de-culverting of local watercourses in order to restore natural habitats and biodiversity.

Officer response:

The policy will be updated to require a comprehensive risk assessment and ground investigations to be undertaken if development is to take place on or adjacent to the historic landfill site in the north west corner of the site. Text will be included which encourages opportunities for de-culverting of local watercourses in order to restore natural habitats and biodiversity.

Submission type: E-Mail
Agree with section?: In Part

Comment summary:

This policy provides a detailed indication of the development aspirations for the strategic site at Low Grange. The intention to provide a major mixed use development scheme (part a.) supported by a strategic masterplan, can in principle be supported as a coordinated mixed use scheme should help to deliver a more sustainably accessible development and reduce the need to travel. However, the delivery of 1000 dwellings is significant and given its location, it has the potential to impact on the SRN. Part d. and e. identify that a Transport Assessment will be used to determine the construction of vehicular access and the contributions that will be required for improvements to the local road network and the SRN. Again, as stated in response to Policy H3.1, the need to understand the impacts of development and the requirements of supporting infrastructure need to be planned for upfront as part of the plan preparation process and should not be left to a planning application. This is particularly pertinent for strategic sites, which are critical to the delivery of the overall strategy. Without understanding the impact of development as part of the Plan preparation process, it is not possible to determine whether the transport infrastructure improvements and mitigation measures proposed in the Plan and the supporting Infrastructure Delivery Plan, are appropriately located and capable of addressing the impacts. Should additional mitigation measures be identified as being required in a Transport Assessment, which have not been planned for, these could potentially be solutions which are not viable, deliverable or capable of being funded, thereby affecting the soundness of the whole Plan. This position is supported by Paragraph 18 in Circular 02/2013: The Strategic Road Network and the Delivery of Sustainable Development, which states that: 'Capacity enhancements and infrastructure required to deliver strategic growth should be identified at the Local Plan stage, which provides the best opportunity to consider development aspirations alongside the associated strategic infrastructure needs. Enhancements should not normally be considered as fresh proposals at the planning application stage. The Highways Agency will work with strategic delivery bodies to identify infrastructure and access needs at the earliest possible opportunity in order to assess suitability, viability and deliverability of such proposals, including the identification of potential funding arrangements.' As stated in response to Policy H3, consideration of the Model Assessment Report along with the development of the Agency's Infrastructure will assist with identifying the implications of the development proposals on the Strategic Road Network, along with any measures that may be required to support the development aspirations.

Officer response:

Comment noted. Identify the implications of development proposals on the Strategic Road Network along with any measures which may be required to support the development and add to the policy.

Comment summary:

The area marked B on the plan at Appendix B should be included within the proposed housing allocation H3.2. The area marked C on the plan at Appendix B and the North Loop Road should be excluded from the proposed housing allocation. Reference to access from Church lane should be amended to North Loop Road. Area C should be allocated for mixed use commercial development or remain unallocated.

Officer response:

Allocation will be updated to include area B. Amend reference to access from Church Lane to North Loop Road. It is not considered desirable to allocate area C for mixed use commercial development, therefore area C will remain unallocated.

Swan's Corner, Nunthorpe

DLP1265

Full Name: England & Lyle
(private clients)

Organisation:

Agent Name: Mr Ian Lyle

Agent Organisation: England & Lyle

Submission type: E-Mail

Agree with section?: No

Comment summary:

We object to the allocation of this site for housing development. The site is not as described in Para 6.52 'underused urban land' but an agricultural field in actively farmed. Our principal objections to housing development of this site are the fact that it would effectively close off any remaining separation between Nunthorpe and Ormesby. A present this site plays an important role in separating these two communities. It also plays an important role in linking the open land and green wedge around Ormesby Hall with the wider countryside to the south. Housing development in this location on the scale proposed would effectively truncate this important wildlife corridor and as a key part of the Strategic Green Infrastructure Network as identified in the Tees Valley Green Infrastructure Strategy 2008, which was also adopted by the Borough Council in 2008. We would also query the capacity of Ormesby Bank (A171) to deal with the additional traffic generated by this development, especially in conjunction with traffic generated by the housing proposed on the Longbank Farm site (Policy H3.6). Both schemes will be accessed from Ormesby Bank further exacerbating the already unacceptable levels of traffic congestion and delay. Alternative sites are available, such as my clients' site at Woodcock Wood that would not have these impacts.

Officer response:

The site is currently used for farming cereal crops. It is not classed as grade 1 to 3a agricultural land. It is considered that development of the site would have a less prominent visual impact than more elevated sites in the Nunthorpe and Ormesby Bank area. Additionally, the site is not located within a green wedge. New development will be required to be well designed in accordance with the character of the area and will be required to provide appropriate landscaping. The importance of this site in forming part of the strategic green infrastructure linking Middlesbrough through to the countryside is noted. To ensure this importance is recognised, the policy will be updated to emphasise the need to incorporate green infrastructure into the development to ensure a permeable route for wildlife, this could be achieved through the provision of open space, public right of way and landscaping. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. The policy includes a requirement to undertake a Transport Assessment to determine the precise actions required to upgrade the road network to an acceptable level, with it anticipated that alterations to Swan's Corner roundabout would be required. Suitable vehicular access from the A171 would be required. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. The Woodcock Wood site was rejected for housing development as the proposals would remove the defensible boundary established by the A174, which helps to effectively contain the built-up area and distinguish it from the Eston Hills and open countryside, and could encourage further development south of the Parkway. Development could have an adverse visual impact on the Eston Hills landscape and the ecological value of the adjacent woodland and country park, which is recorded as having European protected status and biodiversity priority species. Also the site is remote from the local community and the potential scale of development may have unacceptable implications for the local road network.

Section/Policy**Policy H 3.3****Swan's Corner, Nunthorpe****DLP1221****Full Name:** R Jones**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

The deer use the field to cut through to the woods and it would mean more congestion on Ormesby Bank at the roundabout.

Officer response:

Formal open space will be required as part of the development. The establishment of a Public Right of Way across the site to link Nunthorpe and Flatts Lane Country Park will also be required. In accordance with the Local Plan, and other relevant legislation, impacts on biodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. The policy includes a requirement to undertake a Transport Assessment to determine the precise actions required to upgrade the road network to an acceptable level, with it anticipated that alterations to Swan's Corner roundabout would be required. Suitable vehicular access from the A171 would be required. Affordable housing is needed and these areas are not affordable to most people.

Officer response:

The Strategic Housing Market Assessment has identified an unmet demand for larger properties in this location. The site is therefore allocated for executive-style dwellings. However, in accordance with Policy H4, off-site affordable housing contributions will be required, equivalent to providing 15% on-site affordable housing.

DLP1248**Full Name:** S Holmes**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

If you take traffic from Skelton and Swan's Corner developments and add to an access road from top of Ormesby Bank there would be a severe impact on local wildlife on this bio diverse site. Effect on existing old drainage systems. Increased flooding.

Officer response:

Formal open space will be required as part of the development. The establishment of a Public Right of Way across the site to link Nunthorpe and Flatts Lane Country Park will also be required. In accordance with the Local Plan, and other relevant legislation, impacts on biodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Lower parts of the site are understood to experience surface water flooding which would need to be mitigated through sustainable drainage improvements as part of any development of the site.

Section/Policy**Policy H 3.3****Swan's Corner, Nunthorpe**

DLP1250**Full Name:** A A Marley**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

I object to housing on greenfield sites in Ormesby and Nunthrope because Gypsy Lane was closed on the grounds of safety. But the road is now less safe caused by indiscriminate parking. This would mean that the Swan's Corner houses would leave onto Ormesby Bank or Guisborough Road. Already full of traffic now. I personally have an increased 3 miles extra to go to Middlesbrough. Though down Gypsy Lane I would join a double carrigeway not affecting Guisborough Road or Ormesby Bank.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. The policy includes a requirement to undertake a Transport Assessment to determine the precise actions required to upgrade the road network to an acceptable level, with it anticipated that alterations to Swan's Corner roundabout would be required. Suitable vehicular access from the A171 would be required. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. Part of the site was included as a transport reservation in the former Local Plan as part of an East Middlesbrough Transport Corridor (EMTC) by-pass proposal. The allocation was removed from the LDF proposals map in 2007 following a feasibility study which identified highly prohibitive funding, land assembly and engineering constraints. A further study (2009) identified the need to introduce a package of measures to alleviate road congestion, including the new road, however whilst RCBC accepted that strategic improvements are required, the road proposal was not supported on deliverability grounds.

DLP1178**Full Name:** C Morgan**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Other**Agree with section?:** No**Comment summary:**

I object to housing at Swan's Corner because traffic already horrendous through Nunthorpe, particularly at peak times and loss of green spaces.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. The policy includes a requirement to undertake a Transport Assessment to determine the precise actions required to upgrade the road network to an acceptable level, with it anticipated that alterations to Swan's Corner roundabout would be required. Suitable vehicular access from the A171 would be required. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. While the priority has been to accommodate new development on previously developed land and within existing development limits, to meet the housing need within the borough and provide sufficient deliverable sites, it has been necessary to revise development limits to include sustainable greenfield sites. Formal open space will be required as part of the development. The establishment of a Public Right of Way across the site to link Nunthorpe and Flatts Lane Country Park will also be required. In accordance with the Local Plan, and other relevant legislation, impacts on biodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided.

There is enough houses in the area. I didn't buy my home to be enclosed by more housing.

Officer response:

Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline. The site presents an opportunity to improve the housing offer in the borough by adding to the stock of larger detached properties, particularly as the SHMA has indicated unmet demand in this area.

DLP1283**Full Name:** Mr & Mrs A Weatherley**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

This is green belt spaces and should stay green spaces. Keep off our green spaces.

Officer response:

There is no green belt designation within Redcar and Cleveland, however the Local Plan protects green and open spaces as identified on the proposals map, and protect the rural area through the establishment of development limits surrounding the main settlements. While the priority has been to accommodate new development on previously developed land and within existing development limits, to meet the housing need within the borough and provide sufficient deliverable sites, it has been necessary to revise development limits to include sustainable greenfield sites. Unusually, the site is bordered by development on three sides and enclosed by the A171 to the east. As such, development would round-off rather than extend the built-up area. The site is also not designated as green wedge. Formal open space will be required as part of the development. The establishment of a Public Right of Way across the site to link Nunthorpe and Flatts Lane Country Park will also be required. In accordance with the Local Plan, and other relevant legislation, impacts on biodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided.

My old neighbour and myself some years ago organised a petition to stop building on the Longbank Farm site and it was eventually sent to London to decide yes or no. We won the fight then on traffic entering Ormesby Bank and police saying that our roads were too narrow to take more traffic and also the proposed exit was too dangerous as it was too high on the Bank. Having more houses on Swan's Corner would be madness as the bank can't cope with commuter traffic coming in from Guisborough, Stokesley and beyond. Total madness without making new roads elsewhere into Middlesbrough.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. The policy includes a requirement to undertake a Transport Assessment to determine the precise actions required to upgrade the road network to an acceptable level, with it anticipated that alterations to Swan's Corner roundabout would be required. Suitable vehicular access from the A171 would be required. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. Part of the site was included as a transport reservation in the former Local Plan as part of an East Middlesbrough Transport Corridor (EMTC) by-pass proposal. The allocation was removed from the LDF proposals map in 2007 following a feasibility study which identified highly prohibitive funding, land assembly and engineering constraints. A further study (2009) identified the need to introduce a package of measures to alleviate road congestion, including the new road, however while RCBC accepted that strategic improvements are required, the road proposal was not supported on deliverability grounds.

I object to the proposed housing at Swan's Corner because of drainage. The knock on effect of the flooding on the lower part of the site has already caused severe problems for us on Guisborough Road when we have heavy rain, or more than once, a burst water main. Extra houses mean more hard surfaces therefore less soakaway. There has, I believe, also been sewage contamination in our gardens as a result of flooding.

Officer response:

Lower parts of the site are understood to experience surface water flooding which would need to be mitigated through sustainable drainage improvements as part of any development of the site.

While the priority has been to accommodate new development on previously developed land and within existing development limits, to meet the housing need within the borough and provide sufficient deliverable sites, it has been necessary to revise development limits to include sustainable greenfield sites. Unusually, the site is bordered by development on three sides and enclosed by the A171 to the east. As such, development would round-off rather than extend the built-up area. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. The policy includes a requirement to undertake a Transport Assessment to determine the precise actions required to upgrade the road network to an acceptable level, with it anticipated that alterations to Swan's Corner roundabout would be required. Suitable vehicular access from the A171 would be required. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline. The site presents an opportunity to improve the housing offer in the borough by adding to the stock of larger detached properties, particularly as the SHMA has indicated unmet demand in this area.

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. The policy includes a requirement to undertake a Transport Assessment to determine the precise actions required to upgrade the road network to an acceptable level, with it anticipated that alterations to Swan's Corner roundabout would be required. Suitable vehicular access from the A171 would be required. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. While the priority has been to accommodate new development on previously developed land and within existing development limits, to meet the housing need within the borough and provide sufficient deliverable sites, it has been necessary to revise development limits to include sustainable greenfield sites. Unusually, the site is bordered by development on three sides and enclosed by the A171 to the east. As such, development would round-off rather than extend the built-up area.

Having, with great difficulty, looked at the draft Local Plan Information it would appear that the area of land adjacent to the Swans Corner roundabout at Nunthorpe is being put forward for housing development. Whilst working for Cleveland County Council, in the Highways Section, this land was on the line of the Marton North South Link Road and therefore development of it was totally resisted. There is still a corridor of land from Longlands in Middlesbrough to Swans Corner which has been reserved for this proposed new highway which with the increase in traffic and all the future housing developments is greatly needed. I know that Middlesbrough Council are sensible in their approach to this link and feel that it is required whereas Redcar and Cleveland Council are blinkered and obstinate in not supporting the improvement. I feel therefore that this area of land should still be reserved for the highway improvement and not put forward for housing development.

Officer response:

Part of the site was included as a transport reservation in the former Local Plan as part of an East Middlesbrough Transport Corridor (EMTC) by-pass proposal. The allocation was removed from the LDF proposals map in 2007 following a feasibility study which identified highly prohibitive funding, land assembly and engineering constraints. A further study (2009) identified the need to introduce a package of measures to alleviate road congestion, including the new road, however while RCBC accepted that strategic improvements are required, the road proposal was not supported on deliverability grounds.

I object to housing on green fields sites in Nunthorpe, because these areas are getting fewer and fewer, the impact on the wildlife has not been taken into account, as these are habitats for all sorts of animals, birds and insects, it's also used by dog walkers and nature lovers alike. As a child I used to do cross country over the field so where will this now take place. As this takes away the place where people do sport and leisure activities e.g.; running, dog walking, animal watching (birds). Peak time traffic in Nunthorpe is horrendous now, and it will only get worse if these proposals go ahead. What will it be like with all these extra cars? Do you propose any control over traffic in and out of Nunthorpe? As the traffic is a major bug bearer with lots of Nunthorpe residents. By build upon these proposed areas you are taking away loved open areas that are loved and well used by the community. You will also removing wildlife from young children who won't be able to have these on their doorsteps to learn and explore. But not only that you will be taking away part of my childhood memories if the build go ahead. I object to Swans Corner houses.

Officer response:

While the priority has been to accommodate new development on previously developed land and within existing development limits, to meet the housing need within the borough and provide sufficient deliverable sites, it has been necessary to revise development limits to include sustainable greenfield sites. Comment summary:

By way of illustration, it is not clear that there has been any assessment of the significance of the following heritage assets, or that there has been any assessment of the impact of land allocations upon that significance. Nor can I find any commentary regarding the extent to which any harm to that significance is outweighed by public benefit - H3.03 setting of Upsall Hall - grade II. English Heritage is not yet satisfied, therefore, and the Council has not yet demonstrated, that it has identified clearly the significance of any heritage assets that may be affected by a proposed allocation, or carried out an assessment of the impact of development upon that significance. There appears to be little commentary regarding the extent to which any harm to that significance is outweighed by public benefit, taking account of the available evidence and any necessary expertise in accordance with the requirements of the NPPF (see letter for full comments).

Officer response:

A heritage assessment will be undertaken to consider in particular the potential impact of development on the setting of Upsall Hall and the policy will be amended as necessary.

Section/Policy**Policy H 3.3****Swan's Corner, Nunthorpe**

DLP354**Full Name:** H Livingstone**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

Re Council Plans for houses in and around Nunthorpe. Total number of houses planned 445. If each house has 1.5 cars on average, would equal 667 cars, going on to Ormesby Bank and through Nunthorpe. Have you seen the amount of traffic on a school morning now? There will be no green-belt left soon!! I rest my case.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. Comment summary:

Objection to housing development at Swans Corner and Longbeck Farm. Objection 1. That the traffic of a further 420 homes exiting onto Ormesby Bank via either the existing exits at West Bank or a new exist at the top of the Bank of Long Bank Farm and Swans Corner will create further transport difficulties to an already congested main route into Middlesbrough. The extra increase in heavy traffic will create further dangers for children attending school and traffic existing the Banks estate. Objection 2. That the upper reaches of the Longbank Farm has mine shafts and major land slippage and subsidence. Any building work may create problems to existing buildings along and down Farmbank Rd. Objection 3. The local infrastructure in Ormesby is poor with the current local council providing little or no facilities for young adults or children. Adding an extra 420 houses to the area will in its self create further pressures. Objection 4. There has been little or no consultation with the local residents. I understand that there has been council meetings recently with very little formal or none formal contribution from local residents.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. I object to housing at Swan's Corner because at present there is enough development going on at Nunthorpe/Coulby Newham. Traffic congestion would be even worse.

Officer response:

Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline. The site presents an opportunity to improve the housing offer in the borough by adding to the stock of larger detached properties, particularly as the SHMA has indicated unmet demand in this area. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. The policy includes a requirement to undertake a Transport Assessment to determine the precise actions required to upgrade the road network to an acceptable level, with it anticipated that alterations to Swan's Corner roundabout would be required. Suitable vehicular access from the A171 would be required. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport.

Comment summary:

Objects to new housing planned at Swan's Corner. It would completely destroy green areas that many species depend on. Why is new housing needed when there are so many empty? Many green areas already destroyed at Stainton Way and top of Dixon's Bank. Increased traffic congestion. More traffic making it more dangerous for school children to cross road. Flooding would be made worse.

Officer response:

While the priority has been to accommodate new development on previously developed land and within existing development limits, to meet the housing need within the borough and provide sufficient deliverable sites, it has been necessary to revise development limits to include sustainable greenfield sites. Unusually, the site is bordered by development on three sides and enclosed by the A171 to the east. As such, development would round-off rather than extend the built-up area. Formal open space will be required as part of the development. The establishment of a Public Right of Way across the site to link Nunthorpe and Flatts Lane Country Park will also be required. In accordance with the Local Plan, and other relevant legislation, impacts on biodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline. Object to housing at Swan's Corner. Concerns over congestion. Bypass would help resolve congestion. What about Upsall?

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. The policy includes a requirement to undertake a Transport Assessment to determine the precise actions required to upgrade the road network to an acceptable level, with it anticipated that alterations to Swan's Corner roundabout would be required. Suitable vehicular access from the A171 would be required. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. Part of the site was included as a transport reservation in the former Local Plan as part of an East Middlesbrough Transport Corridor (EMTC) by-pass proposal. The allocation was removed from the LDF proposals map in 2007 following a feasibility study which identified highly prohibitive funding, land assembly and engineering constraints. A further study (2009) identified the need to introduce a package of measures to alleviate road congestion, including the new road, however while RCBC accepted that strategic improvements are required, the road proposal was not supported on deliverability grounds. The policy will be amended to ensure that any impacts upon Upsall Hall are acceptable.

The planning dept said they are not building 115 houses on swan corner for 10-15 year's. (where do you get the info from).

Officer response:

The site is phased for 45 dwellings within the period 2014/15 - 2018/19, with a further 70 in the following five year period 2024/25 - 23/24. This has been brought forward slightly from the phasing contained in the previous draft Communities DPD which envisaged development to begin in 2016. The site has been phased in this period as it is considered that it provides a more straightforward development opportunity than other sites in this area.

Suitable vehicular access from the A171 would be required. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport.

Section/Policy**Policy H 3.3****Swan's Corner, Nunthorpe****DLP1051****Full Name:** Mr Bennett**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Other**Agree with section?:** No**Comment summary:**

I object to housing at Swan's Corner because the single carriageway roads to and from Middlesbrough are already congested. Too much green space around Nunthorpe is vanishing.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. The policy includes a requirement to undertake a Transport Assessment to determine the precise actions required to upgrade the road network to an acceptable level, with it anticipated that alterations to Swan's Corner roundabout would be required. Suitable vehicular access from the A171 would be required. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. While the priority has been to accommodate new development on previously developed land and within existing development limits, to meet the housing need within the borough and provide sufficient deliverable sites, it has been necessary to revise development limits to include sustainable greenfield sites. Unusually, the site is bordered by development on three sides and enclosed by the A171 to the east. As such, development would round-off rather than extend the built-up area. Formal open space will be required as part of the development. The establishment of a Public Right of Way across the site to link Nunthorpe and Flatts Lane Country Park will also be required.

DLP906**Full Name:** Michael Houtt**Organisation:** Highways Agency**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

This policy identifies that 115 executive style dwellings at a density of 20 dwellings per hectare will be delivered at the Swan's Corner site and that a Transport Assessment will be used to determine the construction of vehicular access and the contributions that will be required for improvements to the local road network and the SRN. Again, as stated in response to Policy H3.1, the need to understand the impacts of development and the requirements of supporting infrastructure need to be planned for upfront as part of the plan preparation process and should not be left to a planning application. As stated in response to Policy H3, consideration of the Model Assessment Report along with the development of the Agency's study will assist with identifying the implications of the development proposals on the Strategic Road Network, along with any measures that may be required to support the development aspirations.

Officer response:

Comment noted. The site has been included within the model assessment report and the policy already identifies that improvements to the junction of the A1043/A171 and Guisborough Road would be required.

A contribution to open space will be required to meet any needs arising from the development, although this is likely to be provided off-site given the small size of the site. Appropriate landscaping will be required throughout the site, with hedgerows retained where possible. In accordance with the Local Plan, and other relevant legislation, impacts on biodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. It is also considered that the small housing site, which rounds off the housing along the north side of Gypsy Lane, could be accommodated without compromising the integrity of the green wedge which separates Nunthorpe and Ormesby and will continue to be protected. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location, adjacent to Gypsy Lane Rail Halt, and close to services and facilities, such as schools, minimising the need to travel and distance travelled. The scale of development proposed is also relatively small at 10 dwellings. Nevertheless, consideration of this site will be fully integrated into the transport evidence base assessments and if necessary the policy updated to include a requirement to undertake a Transport Assessment to consider the access requirements and wider implications of the proposals for the highway network and/or the requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport.

I object to housing at Gypsy Lane because already problems with drains in the area this will make far more problems.

Officer response:

The site is identified by the Environment Agency as being in Flood Zone 1, an area least likely to experience flooding from rivers or sea. The area is also classed as being at very low risk from surface water flooding. This notwithstanding, any flood risk issues would be required to be addressed as part of the development of the site.

Comment summary:

I object to housing on green fields sites in Nunthorpe, because these areas are getting fewer and fewer, the impact on the wildlife has not been taken into account, as these are habitats for all sorts of animals, birds and insects, it's also used by dog walkers and nature lovers alike. As a child I used to do cross country over the field so where will this now take place. As this takes away the place where people do sport and leisure activities e.g.; running, dog walking, animal watching (birds). Peak time traffic in Nunthorpe is horrendous now, and it will only get worse if these proposals go ahead. What will it be like with all these extra cars? Do you propose any control over traffic in and out of Nunthorpe? As the traffic is a major bug bearer with lots of Nunthorpe residents. By build upon these proposed areas you are taking away loved open areas that are loved and well used by the community. You will also removing wildlife from young children who won't be able to have these on their doorsteps to learn and explore. But not only that you will be taking away part of my childhood memories if the build go ahead. I object to Gypsy Lane.

Officer response:

While the priority has been to accommodate new development on previously developed land and within existing settlements, in order to meet the housing need within the borough and provide sufficient deliverable sites, it has been necessary to revise development limits to accommodate some development in sustainable locations on the edge of existing settlements. The proposed site is currently a small area of agricultural field, there are no designated Public Rights of Way at the site recorded on the definitive map. Comment summary:

The statement in paragraph 6.62 suggests that the heritage assessment has not yet been carried out. English Heritage is not yet satisfied, therefore, and the Council has not yet demonstrated, that it has identified clearly the significance of any heritage assets that may be affected by a proposed allocation, or carried out an assessment of the impact of development upon that significance. There appears to be little commentary regarding the extent to which any harm to that significance is outweighed by public benefit, taking account of the available evidence and any necessary expertise in accordance with the requirements of the NPPF (See letter for full comments).

Officer response:

The impact of the proposed development on Ormesby Hall and wider heritage assets within the Conservation Area was considered, with it being concluded that the development is unlikely to be visible from Ormesby Hall and would not be expected to have a detrimental impact on the character of the Conservation Area or on the landscape at Hambleton Hill. The policy will be amended however in regard to the listed boundary stone within the site.

Gypsy Lane, Nunthorpe

DLP366

Comment summary:

Objects to new housing planned at Gypsy Lane. It would completely destroy green areas that many species depend on. Why is new housing needed when there are so many empty? Many green areas already destroyed at Stainton Way and top of Dixon's Bank. Increased traffic congestion. Flooding would be made worse.

Officer response:

The proposed site is currently a small area of agricultural field, there are no designated Public Rights of Way recorded on the definitive map at the site. A contribution to open space will be required to meet any needs arising from the development, although this is likely to be provided off-site given the small size of the site. Appropriate landscaping will be required throughout the site, with hedgerows retained where possible. In accordance with the Local Plan, and other relevant legislation, impacts on biodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. It is also considered that the small housing site, which rounds off the housing along the north side of Gypsy Lane, could be accommodated without compromising the integrity of the green wedge which separates Nunthorpe and Ormesby and will continue to be protected. Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline. It is therefore necessary to provide an appropriate mix of sites to broaden and improve the housing offer in the borough. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location, adjacent to Gypsy Lane Rail Halt, and close to services and facilities, such as schools, minimising the need to travel and distance travelled. The scale of development proposed is also relatively small at 10 dwellings. Nevertheless, consideration of this site will be fully integrated into the transport evidence base assessments and if necessary the policy updated to include a requirement to undertake a Transport Assessment to consider the access requirements and wider implications of the proposals for the highway network and/or the requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. DLP165**Full Name:** Eric Gendle**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

I want to object to the proposal to build a small number of houses in Gypsy Lane adjacent to the level crossing. The lane itself becomes quite narrow and access to any new-build houses would be difficult. The lane is not part of the Nunthorpe 20mph zone and traffic already uses the lane in a dangerous way, bearing in mind that school children use the lane to get to and from several schools and often wander carelessly all over the road. Though the crossing has been closed for many years, vehicles, especially delivery lorries constantly try to use the crossing and have to undergo a series of manoeuvres in this confined space to turn round. The field itself has a farm gate which is still used by the farmer on a regular basis and will need to be retained for his use. There is a footpath alongside the bungalow, which leads eventually to Ormesby Bank or to Ormesby Hall. This path has been used by local people for over 45 years to my knowledge, and no doubt for far longer, without any restriction being placed on its use, and presumably would qualify as a Right of Way. Were this proposal be allowed to go ahead, Nunthorpe would lose yet another area of green space and a view over the whole of Teesside.

Officer response:

Suitable access from the existing turning head at Gypsy Lane would be required as part of any development of the site and farmer access retained as necessary. The proposed site is currently a small area of agricultural field, there are no designated Public Rights of Way recorded on the definitive map at the site. A contribution to open space will be required to meet any needs arising from the development, although this is likely to be provided off-site given the small size of the site. I object to housing at Gypsy Lane because there are numerous derelict sites, infill sites and derelict buildings to be demolished all within the R&CBC area. We are running out of green spaces.

Officer response:

While the priority has been to accommodate new development on previously developed land and within existing settlements, in order to meet the housing need within the borough and provide sufficient deliverable sites, it has been necessary to revise development limits to accommodate some development in sustainable locations on the edge of existing settlements. The proposed site is currently a small area of agricultural field, without public access. A contribution to open space will be required to meet any needs arising from the development, although this is likely to be provided off-site given the small size of the site. Appropriate landscaping will be required throughout the site, with hedgerows retained where possible. In accordance with the Local Plan, and other relevant legislation, impacts on biodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. It is also considered that the small housing site, which runs along the north side of Gypsy Lane, could be accommodated without compromising the integrity of the green wedge which separates Nunthorpe and Ormesby.

I object to housing at Gypsy Lane because there is limited access here as the lane at the Nunthorpe end has been closed to traffic some years ago. Exit is on a busy road and near to the school.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location, adjacent to Gypsy Lane Rail Halt, and close to services and facilities, such as schools, minimising the need to travel and distance travelled. The scale of development proposed is also relatively small at 10 dwellings. Nevertheless, consideration of this site will be fully integrated into the transport evidence base assessments and if necessary the policy updated to include a requirement to undertake a Transport Assessment to consider the access requirements and wider implications of the proposals for the highway network and/or the requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport.

Section/Policy**Policy H 3.4****Gypsy Lane, Nunthorpe****DLP1251****Full Name:** A A Marley**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

I object to housing on greenfield sites in Ormesby and Nunthrope because Gypsy Lane was closed on the grounds of safety. But the road is now less safe caused by indiscriminate parking. This would mean that the Swan's Corner houses would leave onto Ormesby Bank or Guisborough Road. Already full of traffic now. I personally have an increased 3 miles extra to go to Middlesbrough. Though down Gypsy Lane I would join a double carrigeway not affecting Guisborough Road or Ormesby Bank.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location, adjacent to Gypsy Lane Rail Halt, and close to services and facilities, such as schools, minimising the need to travel and distance travelled. The scale of development proposed is also relatively small at 10 dwellings. Nevertheless, consideration of this site will be fully integrated into the transport evidence base assessments and if necessary the policy updated to include a requirement to undertake a Transport Assessment to consider the access requirements and wider implications of the proposals for the highway network and/or the requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport.

Affordable housing is needed and these areas are not affordable to most people.

Officer response:

There is a need to provide a range of housing to meet identified needs in the borough. However, as stated in the policy, affordable housing will be required in accordance with Policy H4. This requires new housing developments of 15 or more dwellings to provide a minimum of 15% of the total number of dwellings as on-site affordable housing. For developments below this threshold a financial contribution equivalent to providing 15% on-site affordable will be required.

The traffic is a problem now. With roadworks which happen every year and when it snows that's it.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location, within 500m of Nunthorpe railway station, and close to services and facilities, such as schools and shops, minimising the need to travel and distance travelled. Nevertheless, consideration of this site will be fully integrated into the transport evidence base assessments and if necessary the policy updated to include a requirement to undertake a Transport Assessment to consider the access requirements and wider implications of the proposals for the highway network and/or the requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport.

Object to housing on greenfield sites in Ormesby and Nunthorpe. Infrastructure is already at breaking point. Object to high density housing.

Officer response:

While the priority has been to accommodate new development on previously developed land and within existing settlements, in order to meet the housing need within the borough and provide sufficient deliverable sites, it has been necessary to revise development limits to accommodate some development in sustainable locations on the edge of existing settlements. Contributions will be required, as necessary, at the time of the application towards any infrastructure requirement, including local education and healthcare provision, transport, open space and community facilities to meet needs arising from the development. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location, within 500m of Nunthorpe railway station, and close to services and facilities, such as schools and shops, minimising the need to travel and distance travelled. Nevertheless, consideration of this site will be fully integrated into the transport evidence base assessments and if necessary the policy updated to include a requirement to undertake a Transport Assessment to consider the access requirements and wider implications of the proposals for the highway network and/or the requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. The site has been allocated for limited lower density development to respect typical nearby housing densities and the character of the local area, and to minimise and mitigate for the loss or disruption to existing planted areas.

We have more houses than needed. Traffic is already awful. Labour promised to protect green spaces! We have lots of brownfield sites to build affordable housing on.

Officer response:

Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline. It is therefore necessary to provide an appropriate mix of sites, with the Strategic Housing Market Assessment identifying an unmet demand for larger properties in this location. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location, within 500m of Nunthorpe railway station, and close to services and facilities, such as schools and shops, minimising the need to travel and distance travelled. Nevertheless, consideration of this site will be fully integrated into the transport evidence base assessments and if necessary the policy updated to include a requirement to undertake a Transport Assessment to consider the access requirements and wider implications of the proposals for the highway network and/or the requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. Formal open space will be required as part of the development. An ecological audit and any requisite mitigation will also be required, with a deep peripheral woodland buffer to be established to mitigate for the loss of any environmental value and to promote biodiversity. While the priority has been to accommodate new development on previously developed land and within existing settlements, in order to meet the housing need within the borough and provide sufficient deliverable sites, it has been necessary to revise development limits to accommodate some development in sustainable locations on the edge of existing settlements. Development limits will be redrawn surrounding the site.

I object to housing on greenfield sites in Ormesby and Nunthorpe because Gypsy Lane was closed on the grounds of safety. But the road is now less safe caused by indiscriminate parking. This would mean that the Swan's Corner houses would leave onto Ormesby Bank or Guisborough Road. Already full of traffic now. I personally have an increased 3 miles extra to go to Middlesbrough. Though down Gypsy Lane I would join a double carriageway not affecting Guisborough Road or Ormesby Bank.

Officer response:

I object to housing on green fields sites in Nunthorpe, because these areas are getting fewer and fewer, the impact on the wildlife has not been taken into account, as these are habitats for all sorts of animals, birds and insects, it's also used by dog walkers and nature lovers alike. As a child I used to do cross country over the field so where will this now take place. As this takes away the place where people do sport and leisure activities e.g.; running, dog walking, animal watching (birds). Peak time traffic in Nunthorpe is horrendous now, and it will only get worse if these proposals go ahead. What will it be like with all these extra cars? Do you propose any control over traffic in and out of Nunthorpe? As the traffic is a major bug bearer with lots of Nunthorpe residents. By build upon these proposed areas you are taking away loved open areas that are loved and well used by the community. You will also removing wildlife from young children who won't be able to have these on their doorsteps to learn and explore. But not only that you will be taking away part of my childhood memories if the build go ahead. I object to Morton Carr Lane.

Officer response:

Object to development on this site because of increasing volume of traffic on already congested roads, leading to gridlock and chaos. There are not enough local green spaces left to enjoy.

Officer response:

While the priority has been to accommodate new development on previously developed land and within existing settlements, in order to meet the housing need within the borough and provide sufficient deliverable sites, it has been necessary to revise development limits to accommodate some development in sustainable locations on the edge of existing settlements. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location, within 500m of Nunthorpe railway station, and close to services and facilities, such as schools and shops, minimising the need to travel and distance travelled. Nevertheless, consideration of this site will be fully integrated into the transport evidence base assessments and if necessary the policy updated to include a requirement to undertake a Transport Assessment to consider the access requirements and wider implications of the proposals for the highway network and/or the requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. Suitable vehicular access from the north, including the retention of the Public Right of Way at the north-eastern boundary of the site, would be required as part of any development.

Section/Policy**Policy H 3.6****Longbank Farm, Ormesby****DLP1281****Full Name:** Mrs Maureen Plaice**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

This housing project was planned many years ago and went to London on appeal and was refused then by the police for one, who deemed it would be too dangerous for more traffic to enter the bank. Bearing in mind there were very few people then who had cars on our estate, now there are two or three and sometimes 4 to each house. They also said as we only have one exit from the Longbank Bank Road Estate and the roads were very narrow it could cause safety problems to occur if there was a serious fire or accident on the estate. Has anyone bothered to survey the traffic going up and down Ormesby Bank any time of day but particularly at 7am - 9:30am and anytime from 3pm onwards? It is almost impossible to get out of our estate and turn right to go down the bank unless someone lets us out into the line of traffic. Please please look into this carefully as we need the roads sorting out first. We have massive volume of traffic coming through from Stokesley Road and also Guisborough and beyond over the moors daily to commute to work. We cannot take anymore on

Officer response:

Noted that there has been a development proposal on this site previously. A traffic survey has been carried out to assess the impact of all the preferred allocations. The policy also requires a Transport Assessment to be undertaken to assess the impact to ensure traffic levels do not rise to unacceptable levels.

DLP1266**Full Name:** England & Lyle
(private clients)**Organisation:****Agent Name:** Mr Ian Lyle**Agent Organisation:** England & Lyle**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Object to the proposed allocation. Question marks over the sites deliverability. Unsuitable for housing due to its steep slopes, 'skyline' location and awkward configuration, which is mainly to allow for a new access from the A171 Ormesby Bank. Development at northern part of site would effectively truncate the Spencer Beck Green Wedge and separate it off from the open land to the south. This will substantially reduce its value both as a biodiversity and recreational resource. Developers proposals (as seen on NEDRES website) would not meet the requirement of the policy. The NEDRES report also identifies the site's remoteness and poor linkages to its surroundings, and hence its accessibility to public transport, shops, schools etc. as a significant challenge. Impact on already busy road network. Site should be deleted in whole or in part. However, to achieve the Council's aims for the site, capacity would need to be reduced to at most 100 dwellings, which would make the site unviable.

Officer response:

As the site is in a highly visible hillside location and is adjacent to important natural areas only partial development is supported, at the western end, with the eastern part of the site to be largely given over to establishing a landscaped woodland buffer which will enhance the biodiversity and recreational value of the site. The higher and steeper southern part of the site is designated as a Sensitive Landscape Area and Local Wildlife Corridor under Policies N1 and N4 respectively, so any development would be strictly limited in that area. RCBC highways engineers' preliminary assessment indicated that a new junction and access road is likely to be required from near the top of Ormesby Bank to serve the entire site. A transport assessment would however be required to consider the feasibility, precise location and nature of the junction required. Vehicular access via the existing estate roads is deemed unacceptable due to the limited carrying capacity and existing congestion levels at the Ormesby Bank junction at peak times. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could encourage reduced car dependency. The policy includes a requirement to undertake a Transport Assessment to consider the feasibility, location and nature of site access requirements and the wider implications of the proposals for the highway network. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. Although development will extend the housing area along the hillside, it will also provide an opportunity to soften the harsh urban edge established by earlier development, thereby complementing the wooded landscape to the east and enhancing visual quality. Subject to satisfactorily addressing the issues and constraints set out in the policy and achieving an economically viable limited development this site is, overall, preferable to alternative greenfield options nearby in terms of planning policy, environmental and sustainability considerations.

There is enough houses in the area. I didn't buy my home to be enclosed by more housing.

Officer response:

Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline. It is therefore necessary to provide an appropriate mix of sites to broaden and improve the housing offer in the borough.

I object to housing at Longbank Farm because traffic would increase on an already very busy road - Ormesby Bank.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. The policy includes a requirement to undertake a Transport Assessment to consider the feasibility, location and nature of site access requirements and the wider implications of the proposals for the highway network. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport.

I object to housing at Longbank Farm because what precautions will be put in place to protect the area of biodiversity. Again the potential number of cars joining the A171 at rush hour is an issue.

Officer response:

The site is in a highly visible hillside location and is adjacent to important natural areas. Hence only partial development is supported, at the western end, with the eastern part of the site to be largely given over to establishing a landscaped woodland buffer. The higher southern part of the site is designated as a Sensitive Landscape Area and Local Wildlife Corridor under Policies N1 and N4 respectively, so any development will be strictly limited in that area. Although development will extend the housing area along the hillside, it will also provide an opportunity to "soften" the harsh urban edge established by earlier development, thereby complementing the wooded landscape to the east and enhancing the quality of the residential environment. The site is on the periphery of the Eston Hills escarpment and is remote from the designated historic landscape area. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. The policy includes a requirement to undertake a Transport Assessment to consider the feasibility, location and nature of site access requirements and the wider implications of the proposals for the highway network. I object to housing on greenfield sites in Ormesby and Nunthrope.

Officer response:

While the priority has been to accommodate new development on previously developed land and within existing settlements, in order to meet the housing need within the Borough and provide sufficient deliverable sites, it has been necessary to revise development limits to accommodate some development in sustainable locations on the edge of existing settlements.

DLP1372**Full Name:** Marian Miles**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Other**Agree with section?:** No**Comment summary:**

A Council with any sense would try to alleviate the the very bad traffic problems in this area before adding to them by building more houses. But then, who expects common sense in Councillors.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. The policy includes a requirement to undertake a Transport Assessment to consider the feasibility, location and nature of site access requirements and the wider implications of the proposals for the highway network. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport.

Section/Policy**Policy H 3.6****Longbank Farm, Ormesby****DLP1310****Full Name:** Ralf Hughes**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

Good agricultural land would be lost. Traffic levels would increase to horrific levels and there are plenty of urban field sites available in far less congested areas. All the proposed houses would be a blot on the landscape.

Officer response:

The site recorded as being grade 3b on the agricultural land classification and is therefore not considered to be the best and most versatile agricultural land. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. The policy includes a requirement to undertake a Transport Assessment to consider the feasibility, location and nature of site access requirements and the wider implications of the proposals for the highway network. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. The site is in a highly visible hillside location and is adjacent to important natural areas. Hence only partial development is supported, at the western end, with the eastern part of the site to be largely given over to establishing a landscaped woodland buffer. The higher southern part of the site is designated as a Sensitive Landscape Area and Local Wildlife Corridor under Policies N1 and N4 respectively, so any development will be strictly limited in that area. Although development will extend the housing area along the hillside, it will also provide an opportunity to "soften" the harsh urban edge established by earlier development, thereby complementing the wooded landscape to the east and enhancing the quality of the residential environment.

Access to Ormesby Bank during peak periods is a nightmare at present, nevermind with the increase in traffic through the estate this would bring. Another road onto Farm Bank Road would be dangerous, especially during icy weather.

Officer response:

RCBC highways engineers' preliminary assessment indicated that a new junction and access road is likely to be required from near the top of Ormesby Bank to serve the entire site. A transport assessment would however be required to consider the feasibility, precise location and nature of the junction required. Vehicular access via the existing estate roads is deemed unacceptable due to the limited carrying capacity and existing congestion levels at the Ormesby Bank junction at peak times. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. Comment summary:

Object to the proposals. Loss of green space. Loss of privacy. Loss of visual amenity. Light and noise pollution development. Size, configuration and topography not conducive for modern housing development. Will be higher density than existing housing. Why has the number of houses been increased from the number in the SHLAA? Brownfield sites should be developed first. The site should be classed as not currently developable due to delivery constraints. The site is not sustainable, as existing facilities are overloaded. Will erode local character. Increased traffic congestion. Existing estate roads not appropriate for access. New vehicular access from A171 would exacerbate traffic problems on Ormesby Bank. Steep gradient would be hazardous for roads. Prospective residents may park on Ormesby Bank or neighbouring streets to avoid steep gradients. Physical constraints are not conducive of a modern development. Land should form part of green wedge. Likely requirement for extensive ground works/remediation/ piles etc. Site abuts environmentally sensitive areas. Highly visible hillside location. Site is prone to surface water flooding. Despite objections, if still minded to include the site, the density should be significantly lowered, the character should be the same as neighbouring site (i.e. bungalows), no development should be over 1 storey to limit visual impact and a green wedge should be formed along the northern and western boundaries.

Officer response:

While the priority has been to accommodate new development on previously developed land and within existing settlements, in order to meet the housing need within the Borough and provide sufficient deliverable sites, it has been necessary to revise development limits to accommodate some development in sustainable locations on the edge of existing settlements. The impact on the amenities of properties adjacent to the development will be considered when the planning application is submitted. This site is well-related to the adjacent residential area which has good access to the bus network and Nunthorpe schools and is in a more sustainable location than comparable greenfield alternatives. The impact on the amenity of existing properties near the site would be considered as part of the planning application process. Contributions will be sought, as necessary, at the time of the application towards any infrastructure requirement, including local education and healthcare provision, transport, open space and community facilities to meet needs arising from the development. The site area and indicative housing potential were increased after a more detailed layout over a larger land area was submitted by the site promoter following publication of the 2012 SHLAA review. However, the SHLAA is essentially a survey and not a policy document. RCBC highways engineers'™ preliminary assessment indicated that a new junction and access road is likely to be required from near the top of Ormesby Bank to serve the entire site. A transport assessment would however be required to consider the feasibility, precise location and nature of the junction required. Vehicular access via the existing estate roads is deemed unacceptable due to the limited carrying capacity and existing congestion levels at the Ormesby Bank junction at peak times. The site is identified by the Environment Agency as being in Flood Zone 1, an area least likely to experience flooding from rivers or sea. The area is also classed as being at very low risk from surface water flooding. This notwithstanding, any flood risk issues would be required to be addressed as part of the development of the site. Only partial development of the site is supported, at the western end, with the eastern part of the site to be largely given over to establishing a landscaped woodland buffer. The density of the development is expected to be approximately 30 dwellings per hectare, which is broadly comparable with the existing housing in this area.

Comment summary:

Object to this development. There was a lack of consultation. There are brownfield sites which could be developed. There has not been enough consultation. It should be available through the Planning Portal. There should be an online map to view the site. Why are the houses not in keeping with the existing housing styles? This should not be acceptable in more affluent areas. Discrepancy between 12.6 hectares & 21.2 hectares. The existing estate has a history of flooding. Access/egress problems due to its geographical & topographical location. How much volume of traffic has been considered for Ormesby Bank/Cargo Fleet Lane. Schools are over-subscribed. Impact on property valuations should be taken into account. Views of existing residents should be taken into account.

Officer response:

We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Nunthorpe, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. While the priority has been to accommodate new development on previously developed land and within existing settlements, in order to meet the housing need within the Borough and provide sufficient deliverable sites, it has been necessary to revise development limits to accommodate some development in sustainable locations on the edge of existing settlements. There will be an online Proposals Map which people can use to view the site location at the next consultation stage. The site will include a mix of housing types, developed at a similar density to that of neighbouring developments. The site area will be checked. The site is identified by the Environment Agency as being in Flood Zone 1, an area least likely to experience flooding from rivers or sea. The area is also classed as being at very low risk from surface water flooding. This notwithstanding, any flood risk issues would be required to be addressed as part of the development of the site. RCBC highways engineers' preliminary assessment indicated that a new junction and access road is likely to be required from near the top of Ormesby Bank to serve the entire site. Comment summary:

There has been no information/consultation with residents. There was an event held at Guisborough on 13/11/13, why wasn't there one held at Ormesby. Is it social housing or private housing? Why build on green belt when there are brownfields available. Increased traffic and congestion. Impact upon wildlife and views. Why build more houses when the population is declining. Neighbour was refused planning permission for a dormer window even though it looks out over farmland, its clear why now! I think the development should be abandoned and kept as open space.

Officer response:

We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Nunthorpe, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The development will include a mix of housing types, including affordable housing to meet the identified at the time. The higher southern part of the site is designated as a Sensitive Landscape Area and Local Wildlife Corridor under Policies N1 and N4 respectively, so any development will be strictly limited in that area. Any proposals are required to incorporate open space and a formal green link with Flatts Lane Country Park. Although development will extend the housing area along the hillside, it will also provide an opportunity to "soften" the harsh urban edge established by earlier development, thereby complementing the wooded landscape to the east and enhancing the quality of the residential environment. The impact on the amenities of properties adjacent to the development will be considered when the planning application is submitted. While the priority has been to accommodate new development on previously developed land and within existing settlements, in order to meet the housing need within the Borough and provide sufficient deliverable sites, it has been necessary to revise development limits to accommodate some development in sustainable locations on the edge of existing settlements. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. The policy includes a requirement to undertake a Transport Assessment to determine the precise actions required to upgrade the road network to an acceptable level, with it anticipated that alterations to Swan's Corner roundabout would be required. Suitable vehicular access from the A171 would be required. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline.

Comment summary:

My wife and I wish to object to the proposed development of Longbank Farm, Ormesby. 1) We also complain about not been consulted by Redcar and Cleveland Council. I was only made aware of this from a neighbour who had a leaflet from the Lib Dems. 2) We have lived in our house for 49 years and we have always had flooding problems. Surely this will only be made worse when these houses are built due to the sloping field. Can you tell us for certain this will not get worse. 3) Another Green Belt areas will be lost to housing. The farm land is next to woods on the hills and lots of wild life (including deer) will be effected. Lots of people use this area for dog walking and walking into the hills. The noise and disruption due to building work will scare the wildlife away. 4) There is only one road in and out of Longbank Estate. We already have traffic problems on the bank at peak times. The extra traffic caused by these new houses will cause chaos. Also in winter due to the roads being on slopes, when it is icy and with the snow the extra cars will make it worse. 5) The schools in the area are not big enough to take the amount of children from these new houses. There is nowhere to build new schools. Also there will be extra traffic on Ormesby Bank when parents take the children to school. 6) Where have you got the information that we need more housing in this area. Longbank Estate has mostly bungalows and semi-detached houses, what type of houses are to be built? The infrastructure in this Longbank Estate area will not support anymore houses. I would appreciate a response to the points I have made.

Officer response:

We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Nunthorpe, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The site is identified by the Environment Agency as being in Flood Zone 1, an area least likely to experience flooding from rivers or sea. The area is also classed as being at very low risk from surface water flooding. This notwithstanding, any flood risk issues would be required to be addressed as part of the development of the site. While the priority has been to accommodate new development on previously developed land and within existing settlements, in order to meet the housing need within the Borough and provide sufficient deliverable sites, it has been necessary to revise development limits to accommodate some development in sustainable locations on the edge of existing settlements. The site is in a highly visible hillside location and is adjacent to important natural areas. Hence only partial development is supported, at the western end, with the eastern part of the site to be largely given over to establishing a landscaped woodland buffer. The higher southern part of the site is designated as a Sensitive Landscape Area and Local Wildlife Corridor under Policies N1 and N4 respectively, so any development will be strictly limited in that area. Although development will extend the housing area along the hillside, it will also provide an opportunity to "soften" the harsh urban edge established by earlier development, thereby complementing the wooded landscape to the east and enhancing the quality of the residential environment. RCBC highways engineers' preliminary assessment indicated that a new junction and access road is likely to be required from near the top of Ormesby Bank to serve the entire site. A transport assessment would however be required to consider the feasibility, precise location and nature of the junction required. Vehicular access via the existing estate roads is deemed unacceptable due to the limited carrying capacity and existing congestion levels at the Ormesby Bank junction at peak times. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. The policy includes a requirement to undertake a Transport Assessment to consider the feasibility, location and nature of site access requirements and the wider implications of the proposals for the highway network. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. Contributions will be sought, as necessary, at the time of the application towards any infrastructure requirement, including local education and healthcare provision, transport, open space and

DLP557**Comment summary:****Officer response:**

Full Name: Mrs Joan Gregory

I wish to object to the Development Plan on Longbank Farm for a further 320 houses to be built.

The site is identified by the Environment Agency as being in Flood Zone 1, an area least likely to experience flooding from rivers or sea. The area is also classed as being at very low risk from surface water flooding. This notwithstanding, any flood risk issues would be required to be addressed as part of the development of the site.

Organisation:

1. The first indication of the development is a leaflet delivered outlining the proposed project. 2a. My garden is prone to flooding after heavy rain, and run off of melting snow during winter. 2b. Further hard standing and road infrastructure and the slope of the site will increase flooding to my garden (it being the lowest point in the field). 3a. My privacy jeopardized by overlooking houses.

The impact of development upon residential amenity will be assessed as part of any planning application on the site. Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline. RCBC highways engineers' preliminary assessment indicated that a new junction and access road is likely to be required from near the top of Ormesby Bank to serve the entire site. A transport assessment would however be required to consider the feasibility, precise location and nature of the junction required. Vehicular access via the existing estate roads is deemed unacceptable due to the limited carrying capacity and existing congestion levels at the Ormesby Bank junction at peak times. The higher southern part of the site is designated as a Sensitive Landscape Area and Local Wildlife Corridor under Policies N1 and N4 respectively, so any development will be strictly limited in that area. The site is in a highly visible hillside location and is adjacent to important natural areas. Hence only partial development is supported, at the western end, with the eastern part of the site to be largely given over to establishing a landscaped woodland buffer.

Agent Name:

3b. Houses and bungalows for sale are not selling. 4. Traffic problems in/out of the estate are horrendous. Extra vehicles mean more pressure out onto Ormesby Bank. 5. Wildlife is abundant throughout the year. People walking, running, cycling, and dog walkers use the pathways. 6.

Agent Organisation:

Teesside is an industrial area we need our farm land, green field spaces, and woodland not more houses on this estate.

Section/Policy**Policy H 3.6****Longbank Farm, Ormesby****DLP615****Full Name:** Glyn Williams**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

As residents of Farmbank Road Ormesby we would like to object in the strongest possible way to the proposed development H3.6 Longbank Farm. Laid out below are some of the many reasons we believe this proposed development should not go ahead. Loss of important wildlife habitat's The proposed development will devastate a site that contains and adjoins an area of High Biodiversity and outstanding natural beauty, which is also a designated Sensitive Landscape Area and Wildlife Corridor, which is surrounded by Local Nature Reserves. There are many wildlife species at risk in this area including Bats, Owls, Pheasant, Roding Woodcock, Blackbirds, Thrushes, Wrens, Grasshopper Warblers and Lesser Whitethroats and includes a Magpie roosts on Godfalter Hill. Roe Deer graze in this area and use the scrub land to hide their young when first born. Public sewers inadequate The current properties were built in the 1950's which would indicate that the current sewage system would be unable to cope with any increased development with the properties further down the bank bearing the brunt of any overflows of potentially hazardous waste material. Risk of flooding or creation of flood risk The properties backing onto the hillside suffer periodic flooding to the garden areas with rainwater run off cascading down pathways, gardens and drives onto the roadway. Any further development above this line of properties would greatly increase flooding to the extent that property damage may well occur. Blocking natural daylight As the existing properties at the top of Farmbank road back onto the hillside in a south easterly direction the rising sun particularly in winter takes longer to appear due to the steepness of the terrain. Putting even single storey properties on this area of the proposed development will further reduce the hours of direct sunlight to the existing residents gardens. Dominating nearby buildings and overlooking adjoining properties Any houses built on this site would tower over existing single storey dwellings removing all privacy for existing residents living areas and gardens. Those properties with existing dormer extensions would lose all privacy to their bedrooms. Visually damaging in the landscape or in the setting This is a steep tree topped hillside that is highly visible across the Tees Valley any development built here would become a blot on the landscape and totally out of keeping with the current views and landscape. Road system is totally inadequate Proposed building in Guisborough, Skelton, Nunthorpe and Marton will severely hamper traffic flow into central Middlesbrough and access to the parkway particularly on Ormesby bank, resulting in total chaos and gridlock both in the morning rush hour and evening traffic. The entrance to this proposed development is to be situated near the top and steepest section of Ormesby bank, this will also incorporate extra traffic coming from the proposed development on Swans corner.

Officer response:

As the site is in a highly visible hillside location and is adjacent to important natural areas only partial development is supported, at the western end, with the eastern part of the site to be largely given over to establishing a landscaped woodland buffer. The higher southern part of the site is designated as a Sensitive Landscape Area and Local Wildlife Corridor under Policies N1 and N4 respectively, so any development will be strictly limited in that area. Although development will extend the housing area along the hillside, it will also provide an opportunity to "soften" the harsh urban edge established by earlier development, thereby complementing the wooded landscape to the east and enhancing the quality of the residential environment. The site is on the periphery of the Eston Hills escarpment and is remote from the designated historic landscape area. Northumbrian Water Ltd, who are responsible for the sewerage infrastructure, will be consulted to ensure there is drainage infrastructure in place prior to development proceeding. The site is identified by the Environment Agency as being in Flood Zone 1, an area least likely to experience flooding from rivers or sea. The area is also classed as being at very low risk from surface water flooding. This notwithstanding, any flood risk issues would be required to be addressed as part of the development of the site. The impact on the amenities of properties adjacent to the development will be considered when the planning application is submitted. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. The policy includes a requirement to undertake a Transport Assessment to consider the feasibility, location and nature of site access requirements and the wider implications of the proposals for the highway network. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport.

DLP415**Full Name:** Anne Jones**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Regarding the above development proposal I wish to object to this for the following reasons, and also fail to understand why we, the local residents, have not been consulted. I have only learned of this proposal from the local Liberal Democrats. And whilst I knew nothing about it, apparently you had a 'drop in' meeting at Guisborough? Hardly local. I do believe the proposed development would cause severe problems for the existing residents of this estate. I believe most strongly that the loss of green space, loss of privacy, traffic increasing on already congested small roads, quite apart from the noise, would be disastrous. I would also wonder why any new development cannot be built on existing brown field sites? Why is the Council considering building on Greenfield sites outside of the development limits? I also feel that the following points are of note: that this would be a loss of green space used by local residents for recreation and dog walking and that it would mean a loss of privacy to a greater number of residents. I also feel that the local network of roads is already overloaded and that this site would greatly increase traffic congestion and reduce road, and pedestrian, safety. The existing roads are bad enough, and especially in the winter, downright dangerous. An increase of an estimated 500 cars along these roads would be a disaster. On these grounds, I strongly object to these, and to any future planning applications that may be submitted and would appreciate a response to the points made above.

Officer response:

We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Nunthorpe, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. The policy includes a requirement to undertake a Transport Assessment to consider the feasibility, location and nature of site access requirements and the wider implications of the proposals for the highway network. The plan acknowledges that development is likely to require the provision of a separate access road from Ormesby Bank due to the limited traffic handling capacity of the existing estate road network. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. While the priority has been to accommodate new development on previously developed land and within existing settlements, in order to meet the housing need within the Borough and provide sufficient deliverable sites, it has been necessary to revise development limits to accommodate some development in sustainable locations on the edge of existing settlements.

I write in protest re:Labour's proposed plan to give planning permission to build 320 houses on Longbank farm land. The first I heard about it was when the Libdems newsletter came through my door this week. I have has no information or consultation from Labour. I strongly object to the green spaces being used for any development. Fifty two years ago when my house was built, planning permission was refused for the earmarked area because of the one access road on and off the estate. Nothing has changed, still only one road; except the traffic from the existing houses has doubled 350 extra houses means approximate 500 extra cars all trying to get out onto Ormesby Bank. Perhaps Labour Councillors should look in the archives at the plans made 52 years ago.

Officer response:

We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Nunthorpe, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. The policy includes a requirement to undertake a Transport Assessment to determine the precise actions required to upgrade the road network to an acceptable level, with it anticipated that alterations to Swan's Corner roundabout would be required. Suitable vehicular access from the A171 would be required. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. RCBC highways engineers' preliminary assessment indicated that a new junction and access road is likely to be required from near the top of Ormesby Bank to serve the entire site. A transport assessment would however be required to consider the feasibility, precise location and nature of the junction required. Vehicular access via the existing estate roads is deemed unacceptable due to the limited carrying capacity and existing congestion levels at the Ormesby Bank junction at peak times.

Section/Policy**Policy H 3.6****Longbank Farm, Ormesby**

DLP367**Full Name:** R Jones**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

Objects to new housing planned at Longbank Farm. It would completely destroy green areas that many species depend on. Why is new housing needed when there are so many empty? Many green areas already destroyed at Stainton Way and top of Dixon's Bank. Increased traffic congestion. More traffic making it more dangerous for school children to cross road. Flooding would be made worse.

Officer response:

Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. The policy includes a requirement to undertake a Transport Assessment to consider the feasibility, location and nature of site access requirements and the wider implications of the proposals for the highway network. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. RCBC highways engineers' preliminary assessment indicated that a new junction and access road is likely to be required from near the top of Ormesby Bank to serve the entire site. A transport assessment would however be required to consider the feasibility, precise location and nature of the junction required. Vehicular access via the existing estate roads is deemed unacceptable due to the limited carrying capacity and existing congestion levels at the Ormesby Bank junction at peak times. In accordance with the Local Plan, and other relevant legislation, impacts on biodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. While the priority has been to accommodate new development on previously developed land and within existing development limits, to meet the housing need within the borough and provide sufficient deliverable sites, it has been necessary to revise development limits to include sustainable greenfield sites. The site is identified by the Environment Agency as being in Flood Zone 1, an area least likely to experience flooding from rivers or sea. The area is also classed as being at very low risk from surface water flooding. This notwithstanding, any flood risk issues would be required to be addressed as part of the development of the site.

Section/Policy**Policy H 3.6****Longbank Farm, Ormesby**

DLP359**Full Name:** Mr T Tinkler**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

Proposals would result in at least 400 extra cars using the bend at West Bank and Long Bank which is a danger zone at present. Difficult to get access onto Ormesby Bank, particularly on a morning, which will be made worse by additional traffic. A lot of schoolchildren use Westbank and Longbank on a morning and evening after school which is good as it keeps them off Ormesby Bank which has a lot of traffic.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location on a bus route close to services and facilities, such as schools, minimising the need to travel and distance travelled. The policy includes a requirement to undertake a Transport Assessment to determine the precise actions required to upgrade the road network to an acceptable level. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport.

Comment summary:

Object to the inclusion of this site within the Redcar and Cleveland Local Plan and any future planning applications which may be submitted for this site. The inclusion of Longbank Farm is likely to cause significant problems for the existing community. There will be a loss of greenspace, loss of privacy, increased traffic congestion and light and noise pollution from the proposed development. There are issues with developing this site including access, congestion, biodiversity interest, site is steeply sloping, there are water and sewerage infrastructure crossing the site, impact on landscape, surface water flooding and there is a shortage of school places. Understand why such a development would be included within the SHLAA, in order that the Council has a sufficient supply of housing to meet local needs over the plan period and is part of the evidence base to support the Local Plan. There is no evidence to justify the projected housing requirements given that population is falling. If housing is required, brownfield sites should be developed rather than greenfield sites. If the Council is minded to include this site within the Local Plan, and at some point in the future grant planning permission for development on this site then suggest the following: Density should be lower, the character of the housing is similar to that existing on the site i.e. bungalows, a green wedge should be formed along the western and northern boundaries of the site, so to maintain the existing wayleave to facilitate access to the existing major infrastructure. Consider that the damaging consequences outlined in the letter constitute material considerations indicating that the site should not be allocated in the SHLAA or the emerging Local Plan.

Officer response:

The site is in a highly visible steeply sloping hillside location and is adjacent to important natural areas. Hence only partial development is supported, at the western end, with the eastern part of the site to be largely given over to establishing a landscaped woodland buffer. The higher southern part of the site is designated as a Sensitive Landscape Area and Local Wildlife Corridor under Policies N1 and N4 respectively, so any development should be strictly limited in that area. Although development will extend the housing area along the hillside, it will also provide an opportunity to 'soften' the harsh urban edge established by earlier development, thereby complementing the wooded landscape to the east and enhancing the quality of the residential environment. The site is on the periphery of the Eston Hills escarpment and is remote from the designated historic landscape area. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. The policy includes a requirement to undertake a Transport Assessment to consider the feasibility, location and nature of site access requirements and the wider implications of the proposals for the highway network. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. RCBC highways engineers' preliminary assessment indicated that a new junction and access road is likely to be required from near the top of Ormesby Bank to serve the entire site. A transport assessment would however be required to consider the feasibility, precise location and nature of the junction required. Vehicular access via the existing estate roads is deemed unacceptable due to the limited carrying capacity and existing congestion levels at the Ormesby Bank junction at peak times. Contributions will be sought, as necessary, at the time of the application towards any infrastructure requirement, including local education and healthcare provision, transport, open space and community facilities to meet needs arising from the development. The site is identified by the Environment Agency as being in Flood Zone 1, an area least likely to experience flooding from rivers or sea. The area is also classed as being at very low risk from surface water flooding. This notwithstanding, any flood risk issues would be required to be addressed as part of the development of the site. Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline. It is therefore necessary to provide an appropriate mix of sites to broaden and

improve the housing offer in the borough. The policy states that density will be 30 dwellings per hectare. This is indicative and may change depending on the developer's proposals and requirements at the time. The policy proposes that no more than 50% of the site area should be given over to development. While the priority has been to accommodate new development on previously developed land and within existing settlements, in order to meet the housing need within the Borough and provide sufficient deliverable sites, it has been necessary to revise development limits to accommodate some development in sustainable locations on the edge of existing settlements.

DLP351**Comment summary:****Officer response:****Full Name:** H Livingstone

Re Council Plans for houses in and around Nunthorpe. Total number of houses planned 445. If each house has 1.5 cars on average, would equal 667 cars, going on to Ormesby Bank and through Nunthorpe. Have you seen the amount of traffic on a school morning now? There will be no green-belt left soon!! I rest my case.

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. Comment summary:

Objects to the proposed housing allocation at Longbank Farm. Feels that the consultation was not adequately publicised. The will cause problems for the existing community through loss of green space, loss of privacy, increased traffic congestion, light and noise pollution. Questions what realistic evidence the Council has to support the projected housing requirement when the population is declining. The site should not be considered to be developable within the SHLAA due to access problems, biodiversity interest, steeply sloping hill, and water and sewerage pipelines. Other issues with the site include impact on landscape, on-site surface water flooding, numerous dwellings abutting the site in separate ownership, impact on local road network, achieving a balance of development which is viable and in keeping with the character of the setting and possible requirement for additional school places. Brownfield sites should be built on rather than greenfield ones. Why has the site area and yield been increased from the SHLAA? The land is not suitable due to historical uses and would require extensive ground works. The land should form part of an extended green wedge from Spencerbeck. The site would not be viable due to all of the constraints that need to be overcome. The site abuts environmentally sensitive areas including a sensitive landscape area and wildlife corridor.

Officer response:

We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Nunthorpe, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. In accordance with the Local Plan, and other relevant legislation, impacts on biodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. The policy includes a requirement to undertake a Transport Assessment to determine the precise actions required to upgrade the road network to an acceptable level. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline. Contributions will be required, as necessary, at the time of the application towards any infrastructure requirement, including local education and healthcare provision, transport, open space and community facilities to meet needs arising from the development. While the priority has been to accommodate new development on previously developed land and within existing development limits, to meet the housing need within the borough and provide sufficient deliverable sites, it has been necessary to revise development limits to include sustainable greenfield sites. Formal open space will be required as part of the development. The site is identified by the Environment Agency as being in Flood Zone 1, an area least likely to experience flooding from rivers or sea. The area is also classed as being at very low risk from surface water flooding. This notwithstanding, any flood risk issues would be required to be addressed as part of the development of the site. The site area and indicative housing potential were increased after a more detailed layout over a larger land area was submitted by the site promoter following publication of the 2012 SHLAA review. However, the SHLAA is essentially a survey and not a policy document.

* Potential flood risk area - assessment of risk and ability/capacity of existing drainage system to cope with undue/excess water levels must be conducted *Using the councils own statistical 'evidence' the proposals for 320 dwellings will mean approx. 700 more residents and upwards of 500 more motor vehicles - this at a time when the estates road and pedestrian safety is already compromised and traffic congestion and carbon emissions on Ormesby Bank are adverse. The proposals would only serve to exacerbate the current problems * Cannot see the argument for such a housing development and, when linked with that proposed at Swans Corner, would result in some 435 more dwellings in an area which simply would not be able to cope and does not need them. It smacks more of an Authority desperate for capital and 'hang' the needs/wishes of the community * Existing services are already stretched - How will the education, transport and healthcare infrastructure cope with such additional demands? We no longer have a circular bus service to Nunthorpe GP surgery, James Cook Hospital, Morrisons Supermarket ; will existing schools have sufficient places to meet such an increased demand? * Such a large undertaking would create obvious adverse environmental and social issues - noise, pollution, disturbance of the local wildlife, flora and fauna - potential for landslip in a former deep mining area- all of which would be ongoing for many years * How is the council going to attract people to fill 115 executive, 5 bedroom, style houses and 320 other dwelling types? Many current residents find it difficult to afford even 'starter' type homes and to source 'inward migration' would require an employment potential base that R&C simply does not have

Officer response:

The site is identified by the Environment Agency as being in Flood Zone 1, an area least likely to experience flooding from rivers or sea. The area is also classed as being at very low risk from surface water flooding. This notwithstanding, any flood risk issues would be required to be addressed as part of the development of the site. Objection to housing development at Swans Corner and Long Bank Farm. Objection 1. That the traffic of a further 420 homes exiting onto Ormesby Bank via either the existing exits at West Bank or a new exist at the top of the Bank of Long Bank Farm and Swans Corner will create further transport difficulties to an already congested main route into Middlesbrough. The extra increase in heavy traffic will create further dangers for children attending school and traffic existing the Banks estate. Objection 2. That the upper reaches of the Longbank Farm has mine shafts and major land slippage and subsidence. Any building work may create problems to existing buildings along and down Farmbank Rd. Objection 3. The local infrastructure in Ormesby is poor with the current local council providing little or no facilities for young adults or children. Adding an extra 420 houses to the area will in its self create further pressures. Objection 4. There has been little or no consultation with the local residents. I understand that there has been council meetings recently with very little formal or none formal contribution from local residents.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. We have lived here for 37 - our first home. Have you not thought about access! We have 1 exit and 1 entrance. Which is bad enough trying to get onto Ormesby Bank. How about making it into a park or a community centre for our community. There are lots of children on this estate who need somewhere to play. The reason we moved here was because of the view. Have you thought about the cars etc. - the roads are narrow enough and Woodbank Road alone is always full of residents cars plus visitors. Some of our drives are steep and therefore we have to leave our cars on our fronts. Most families have a car each and some residents are nasty if you park at their front. It is all about money but thought for people's feelings who pay high taxes and Council Tax of course, are not. Hopefully access is not through Woodbank Road, our road surface is falling to bits as it is and the road is narrow. God help us if we have to endure more traffic. Longbank Road will be impossible, especially in the winter. I do hope all these comments have been thought about!!! I am sure there is many more to consider.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. The policy includes a requirement to undertake a Transport Assessment to consider the feasibility, location and nature of site access requirements and the wider implications of the proposals for the highway network. The plan acknowledges that development is likely to require the provision of a separate access road from Ormesby Bank due to the limited traffic handling capacity of the existing estate road network. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. RCBC highways engineers' preliminary assessment indicated that a new junction and access road is likely to be required from near the top of Ormesby Bank to serve the entire site. A transport assessment would however be required to consider the feasibility, precise location and nature of the junction required. Vehicular access via the existing estate roads is deemed unacceptable due to the limited carrying capacity and existing congestion levels at the Ormesby Bank junction at peak times.

I object to housing at Longbank Fram because Ormesby Bank already has high volumes of traffic.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. The policy includes a requirement to undertake a Transport Assessment to consider the feasibility, location and nature of site access requirements and the wider implications of the proposals for the highway network. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport.

Comment summary:

Amount of traffic and congestion on Ormesby Bank at present is untenable and additional housing will worsen this. Particularly in hazardous weather conditions. Impact on wildlife already housed in this area, as local resident on Longbank Farm site I regularly see deer, pheasant and Barn owls. Impact on local schools ability to accommodate additional numbers generated by new housing, therefore impacting our access to adequate schooling. Location of access road, likely to be outside my backgarden, concerns regarding noise, pollution and privacy. I suffer with lung/breathing complaints therefore pollution from traffic would exacerbate this.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. At the same time, because the site is well-related to the adjacent residential area which has good access to bus services and schools at Nunthorpe, this could promote reduced car dependency. The policy includes a requirement to undertake a Transport Assessment to consider the feasibility, location and nature of site access requirements and the wider implications of the proposals for the highway network. To ensure the development minimises the need to travel by means of the private car, the policy will be amended to also include a requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport. The higher southern part of the site is designated as a Sensitive Landscape Area and Local Wildlife Corridor under Policies N1 and N4 respectively, so any development will be strictly limited in that area. Although development will extend the housing area along the hillside, it will also provide an opportunity to "soften" the harsh urban edge established by earlier development, thereby complementing the wooded landscape to the east and enhancing the quality of the residential environment. Contributions will be sought, as necessary, at the time of the application towards any infrastructure requirement, including local education and healthcare provision, transport, open space and community facilities to meet needs arising from the development.

Comment summary:

Gladedale Estates Ltd welcome and fully support housing allocation H3.6, which proposes the development of up to 320 dwellings on land at Longbank Farm, Ormesby. Notwithstanding this, Gladedale Estates Ltd would like to object to certain elements of the Draft Plan with these relating both directly to Policy H3.6 and also other non-site specific policies that may have a bearing on the overall delivery of the housing land requirement in Redcar and Cleveland. In this regard, Gladedale Estates Ltd make the following points: Policy H3.6, as currently worded, indicates that housing delivery of the site will not commence until 2019/2020, beyond which 75 units are phased from 2020 to 2024, 150 units 2025 to 2029 and a further 95 units post 2029. However, the site, in its entirety, is currently fully deliverable in the context of paragraph 47 and Footnote 11 of the NPPF. As such, and on a reasonable annual build out rate of 36 private units per annum, 144 private units should be allocated to the first phase ie. 2014/2015 to 18/19 with further 144 private units allocated within the second phase (2020 to 2024) with the balance 2025 onwards. The boundary to the housing allocation shown on drawing no: PLNG501 currently excludes land to the north-west and south-east of Nunthorpe Reservoir. This area of land is under the same ownership as the land contained within the existing boundaries to the allocation and there is no obvious reason why these have been excluded. Whilst these areas may not be suitable for accommodating new housing (this will be confirmed as part of the planning application process) they may, none the less, contribute to development across the wider site by providing the opportunity for introducing landscape buffers in order to minimise any visual impact from development. Policy H3.6 currently puts a restriction on development of the site to no more than 50% of the area as a whole. It is Gladedale's view that, until a full landscape/visual assessment is carried out across the site in order to identify specifically those areas that are more/less suited to accommodating residential development, it is inappropriate at this stage to place such a potentially restrictive burden on development of the site. Indeed, such a restriction may force higher density development in areas considered suitable to accommodate housing, but which would otherwise be more suited to accommodating a less dense form of development. Gladedale therefore request that reference to the development being restricted to 50% of the land area be removed from Policy H3.6.

Officer response:

Housing delivery has been phased because the plan seeks to achieve a balanced distribution of supply across the period, with priority given to the most sustainable sites. The development of this site would be expected to proceed in the later part of the plan period. The document will be amended accordingly to show the correct site boundary. The policy seeks to achieve the limited development of the site in order to minimise the impact on the landscape and local wildlife, to enhance the natural environment through stronger landscaping which blends into the adjacent woodland to the east, to round-off the built-up area at this sensitive location and promote the sustainable development of the site. The 50% figure reflects these objectives, but is indicative and will be reviewed as part of the further consideration of the site. Any proposed increases in density would need to be appropriate to the characteristics and location of the site and justified as essential to achieving economic viability. An alternative approach would be to consider development on the farmstead, which could also promote a more coherent extension to the residential area. As Policy H3 indicates however, achieving the overall housing requirement under Policy H1 is not dependent on this site being built-out to the full potential identified by the developer.

Section/Policy**Policy H 3.7****Spencerbeck Farm, Ormesby****DLP1008****Full Name:** McLean**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

Object to housing on greenfield sites in Ormesby and Nunthorpe. Increased congestion. Lack of parking and doctors surgeries.

Officer response:

The site has planning permission for 41 dwellings. All material planning considerations were considered as part of the planning application process.

DLP294**Full Name:** Mr Richard Roberts**Organisation:****Agent Name:** Mr Michael Mealing**Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

The additional land to the south of the present buildings should also be included as part of the site. The combined site could yield 100 dwellings. There is currently an undersupply of housing and the Council is not able to demonstrate a five-year supply of housing land. For this reason, additional land at Spencerbeck Farm should be released. This site would redress the quality and quantity of housing supply in Greater Eston South, as set out in the SHMA, notably the shortfalls of three, four + bedroom houses. The site can be designed in a way which adds to the amenity of the immediate area without devaluing the appearance, character or function of the green wedge. Perimeter planting around the site can be supplemented so as to enhance the contribution to overall green infrastructure.

Officer response:

Extending the site to the south would significantly extend the housing area into the green wedge and remove the buffer between the farm buildings and the open space and has therefore been rejected as a preferred allocation. The Council's aim is to protect the green wedge. There is currently an undersupply of housing sites, however once the Local Plan is adopted, this won't be the case. The other preferred allocations will make up the shortfall.

Section/Policy**Policy H 3.8****Normanby Hall**

DLP1267**Full Name:** England & Lyle
(private clients)**Organisation:****Agent Name:** Mr Ian Lyle**Agent Organisation:** England & Lyle**Submission type:** E-Mail**Agree with section?:** Yes**Comment summary:**

Our clients would fully support the allocation of Normanby Hall and its grounds for housing development under Policy H3.8. The Hall has now been vacant for a number of years and a sensitively designed residential development comprising the conversion of the listed hall and development of a number of additional dwellings within the grounds would secure the heritage value and significance of this site. It is considered that any development scheme must be designed and this approach will determine the site's capacity. Marketing of the site has indicated that there are no alternative viable options for the restoration of the hall and grounds. Our clients are in discussions with prospective developers in connection with bringing forward a residential scheme for the Hall and grounds. An archaeological Assessment and a detailed assessment of the trees on site has already been undertaken in advance of any design works.

Officer response:

Support for this site noted. Note the suggestion that the site should be design led and this approach is supported. Note that every effort has been made to explore alternative options to restore the hall and its grounds; however no viable alternative has been identified. Note that discussions have already taken place with prospective developers and that a tree survey and archaeology assessment has already been undertaken.

Concerns over the extra traffic from the proposals. If the access is to be taken from Normanby Hall Park and Coach Mews, would object if there was through traffic from Cricket Lane and other sites. Hope the planning department will be sympathetic to the need to save Normanby Hall, but not at the cost of swamping the site with too many houses.

Officer response:

An increase in the amount of traffic is an inevitable consequence of all housing developments and a certain level of increase will need to be accepted from all developments. However, this site was chosen due to its sustainable location, and close to services and facilities, such as schools, minimising the need to travel and the distance travelled. The scale of development proposed is also relatively small at 25 dwellings. Nevertheless, consideration of this site will be fully integrated into the transport evidence base assessments and if necessary the policy updated to include a requirement to undertake a Transport Assessment to consider the access requirements and wider implications of the proposals for the highway network. A balance needs to be struck between protecting the setting of the Hall and making the site viable enough to provide funding to save and improve the Hall.

Hope the planning department will be sympathetic to the need to save Normanby Hall, but not at the cost of swamping the site with too many houses.

Officer response:

This policy seeks to achieve a balance between, on the one hand, the scale of development and its impacts on the listed building, its setting, the local road network and residential amenity and, on the other, the need to achieve a scheme which is economically viable given the abnormal development costs associated with the site. It is acknowledged in the plan that the figure of 25 units is an indicative capacity based on initial comments from RCBC Highways Engineers and there are limitations in providing an alternative access through Coach House Mews.

DLP805**Full Name:** Mr Alan Hunter**Organisation:** English Heritage**Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

By way of illustration, it is not clear that there has been any assessment of the significance of the following heritage assets, or that there has been any assessment of the impact of land allocations upon that significance. Nor can I find any commentary regarding the extent to which any harm to that significance is outweighed by public benefit - H3.08 direct and indirect impacts on Normanby Hall - grade II. English Heritage is not yet satisfied, therefore, and the Council has not yet demonstrated, that it has identified clearly the significance of any heritage assets that may be affected by a proposed allocation, or carried out an assessment of the impact of development upon that significance. There appears to be little commentary regarding the extent to which any harm to that significance is outweighed by public benefit, taking account of the available evidence and any necessary expertise in accordance with the requirements of the NPPF (see letter for full comments).

Officer response:

Consideration has previously been given to the potential impact of the development upon Normanby Hall and its setting. It is considered that a sympathetic development which includes the restoration and sustainable re-use of the existing hall could be achieved on the site, subject to the submission of an acceptable scheme. Any proposals will be carefully considered against HE2.

Section/Policy**Policy H 3.8****Normanby Hall**

DLP162**Full Name:** Mr D Stockburn**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

I note that under the new plan you are to increase the number of houses from 20 to 25 I believe this figure to be too great an increase for the Grade 2 listed buildings and grounds. Also I would like to object to the increase in traffic this will bring has where Normanby Hall joins the B1380 residents already have difficulty exiting due to the poor visibility because of the trees and foliage people visiting properties on the B1380 also park on both sides of Normanby Hall Park entry/exit plus there is also the public footpath crossing at this point. There is also the question of children living in Normanby Hall Park crossing the road to play on the green. The proposed plan will increase traffic by nearly 50% onto an already very busy road with poor accident record.

Officer response:

Whilst it is recognised that the number of dwellings proposed has been increased slightly from the figure within the Communities DPD, this has been necessary to ensure that the development would be viable, in order to secure the long term future of Normanby Hall. The policy includes a condition that development will only be permitted which is sympathetic to the listed building and its setting. Section/Policy**Policy H 3.11****St. Hilda's Church, Redcar****DLP275****Full Name:** Mr S Mitchell**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

St Hilda's Church, Redcar (H3.11) - if this proposal is implemented it will create a solid mass of housing from West Dyke Road in the east to Kirkleatham Lane in the west which would be totally unacceptable. The housing scheme currently being built just along the road at Newcomen Primary School has no green open space incorporated within it even though the Council's planning guidelines indicate that it should have had. Now the Council is proposing to remove what little green open space there is left in this area by building on the whole of this site. The lack of green open space at Newcomen School should be offset by leaving this green open space as is and the proposal for housing associated with the rebuild of St Hilda's Church abandoned.

Officer response:

Although the proposals will result in the loss of public open space, this is of limited environmental and amenity value due to the position of the existing church towards the centre of the site. Provision within the local area also meets the proposed minimum quantity standard and the loss of the open space to development will have a negligible effect on supply. However, in mitigation, the policy requires an off-site contribution towards the enhancement of existing local spaces.

Comment summary:

This site is wholly playing field. The Council has not sought to argue that there is surplus of playing pitches in Redcar. This is because the PPS for the Redcar area shows a shortfall of junior football pitches, cricket pitches, and all forms of rugby pitches - which the retention of this site for sport could help to resolve.

Officer response:

The site was formerly a playing field associated with the college, however community use by a junior football club ceased in 2008 when the club relocated to a new base at Dormanstown. The Redcar & Cleveland Playing Pitch Strategy recommends alternative approaches for addressing shortfalls in the Redcar including remarking surplus adult pitches to meet the demand for junior pitches.

Full Name: Mr Gary Groom

Organisation: Redcar and Cleveland College

Agent Name: Matt Verlander

Agent Organisation: Arup

Submission type: E-Mail

Agree with section?: No

Comment summary:

The College will through the Property Strategy review the precise land area and also through its own market and viability assessments test a viable number of units and density for the site and then review this with the Council. Dependent on the strategy for the disposal of the site the land may be available for development sooner than the phasing shown in the policy. Clearly this is also dependent on the aspirations of the eventual purchaser of the land. Disagree that the access to the site should be gained through the Wheatlands Chase development as this places commencement of this site in the hands of the existing developer of Wheatlands Chase. This site should be treated as a new standalone site in its own right. The College support the Council's aspiration that the development of the site should result in a particularly high quality scheme. The College also support the principal that in order to achieve a well-designed scheme, proposals should be well-related to adjacent developments and should include a strong physical integration with the Wheatlands Chase development. Noted that the policy seeks to deliver a significant proportion of larger detached properties and affordable housing, however, the proposed mix of units will be principally informed by the College and developer's market and viability assessments. It is our understanding is that there is an oversupply of recreational and open space in this part of the Borough and therefore any provision required on the site will need to be considered in the broader context. The College agree that a transport assessment is required to inform a vehicular access strategy for the site. However, whilst there may be merit in this being via the Wheatland Chase site, the College does not support that access to the site is solely dependent on agreement with a third party (Miller Homes). As a part of the agreement to sell the land at Redcar Lane in 2008 the developer was required to provide a drainage system which could accommodate the development of the whole of the Redcar Lane site. It is our understanding therefore that such a system is already in place. The level of financial contributions towards infrastructure enhancements will be informed by the College and developer's viability assessments. Any financial contributions from the scheme should also take into account that the disposal receipts from the sale of the site will be solely re-invested in education facilities within the Borough.

Officer response:

In the absence of an indicative scheme layout, the estimated yield is based on 75% of the total site area being developed at an indicative overall density of 30 dwellings per hectare. The exact yield will be determined at the planning application stage. Delivery phasing seeks to promote a continuous and balanced housing supply over the plan period. Sufficient sites have been identified to meet requirements over the first phase, taking into account current commitments and the priority given to previously developed sites. The phasing reflects this and the assumption that development is likely to follow on from the neighbouring Wheatlands Chase scheme which is progressing well. The phasing is nonetheless indicative and is subject to change if demand dictates otherwise. Criterion c). will therefore be removed. Whilst the plan indicates that access should be provided via the existing development site, alternative arrangements may be acceptable if they are fully supported by a transport assessment; the policy and supporting text will be amended accordingly. The Tees Valley SHMA identifies that there is an undersupply of larger detached properties within the borough. This site offers one of the few realistic opportunities to deliver a significant proportion of larger detached properties to meet identified needs, therefore the policy reflects this. The site will also be expected to deliver on-site affordable housing in accordance with Policy H4 to meet identified needs. The policy acknowledges the Wheatlands Chase SUDS scheme and it is assumed that the existing arrangements will be capable of accommodating further run-off, negating any further need for remedial action. Any requirement for developer contributions towards infrastructure enhancements will be determined at the planning application stage in accordance with Policy SD5. Open space requirements should be determined in accordance with Policy N3, which advises that where possible provision of open space should be provided on-site. The need for open space provision will be considered in terms of quantity, quality and accessibility of open space, taking into account additional needs created by the development.

Section/Policy**Policy H 3.13****Connexions Campus (South), Redcar****DLP1564****Full Name:** MW Burton**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

Access to local open space is essential for the well-being and health of residents, both young and old. Your proposals for more housing both in local open space and in existing estates will put more traffic onto Redcar Lane, spoil the health of near residents and cause enormous traffic tailbacks especially if your proposals for housing in the Marske and other regions come to fruition.

Section/Policy**Policy H 3.14****Land adjacent Rye Hills School, Redcar****DLP819****Full Name:** Mr Dave McGuire**Organisation:** Sport England**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

This site is brownfield, and has not previously been used as playing field. Nevertheless, and in common with a number of schools built in the Borough under the PFI scheme, the Council reneged on planning commitments made to Sport England during the application process. Sport England allows new build schools to be sited on the school's playing field provided the built footprint of the former school is cleared and turned into replacement playing field once the new school is occupied. This allocation is part of the former school's footprint and should have been part of the playing field re-provision.

Officer response:

The land was formerly occupied by school buildings, has never been used as a playing field and now falls outwith the school boundary. The playing fields serving the redeveloped school far exceed the minimum required standard. In the circumstances, redevelopment for housing would represent a more socially-valuable and sustainable re-use of a vacant urban brownfield site.

DLP475**Full Name:** Mr H R Wildon**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

Object to house building on green field sites in Redcar & Marske. Once a precedent is set, any green spaces will be swallowed up by the demand of house building. We would like a copy of any detailed plans of proposed house building on the Ryehills School greenfields site, if and when they become available. The Labour Party's manifesto promises to protect local green spaces from house building is not being upheld. Reneging on promises will lose a lot of loyal Labour voters.

Officer response:

The Council has prioritised the allocation of previously developed land for development. This is a previously developed site which was formerly occupied by school buildings. Designated open spaces will continue to be protected under Policy N2. Details of any planning applications submitted for the site will be available to view on-line or at the Council's office.

DLP42**Full Name:** Cllr Mary Ovens**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

I wish to register my concerns re.Policy H3.13 on the grounds of access and additional traffic onto Redcar Lane. My other concern is H3.14 as this land was always intended for the development of a new build for Redcar Gym Club.This was accepted by the Governing Body of the school . Discussions with the council have always indicated this use and I am very disappointed to see the reneging of the use of the land.

Officer response:

The policy indicates that the proposals will be subject to achieving an acceptable vehicular access to the site preferably via the existing estate road network off Warwick Road. The Council has assessed the impact of development on the road network and mitigation works have been identified where necessary. The Redcar Gym scheme is not considered to be deliverable, therefore the site has been proposed for an alternative use.

Section/Policy**Policy H 3.14****Land adjacent Rye Hills School, Redcar****DLP272****Full Name:** Mr S Mitchell**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

The Council's playing pitch strategy which was adopted on 13 December 2011 states that there is a shortage of junior and mini soccer pitches in the borough and, as part of the strategy for addressing that shortfall, advocates community use of school playing fields. Any proposal to build on school playing fields would therefore not only contradict the current government's stance on that matter but also undermine the Council's own playing pitch strategy. The proposals in the plan to build on school playing fields should therefore be withdrawn (and additional playing pitches established on those areas instead). Moreover, from a traffic perspective, Redcar Lane is now almost operating at "full capacity" so the extra traffic which would be generated by this scheme (H3.14) and the other proposed scheme on Redcar Lane (H3.13) would cause major problems. In addition, the railway crossing at the north end presents a significant bottleneck to traffic (the crossing closes on average four to five times an hour during the day) and that is never going to go away. It is therefore extremely unwise to build any further houses whatsoever in the Redcar Lane catchment area.

Officer response:

The site was previously occupied by school buildings and has never formed part of the RyeHills School playing fields. The Redcar & Cleveland Playing Pitch Strategy identifies an surplus of senior football pitches within the Redcar area, which could be converted to meet the shortfall in junior and mini pitches. The Council has assessed the impact of development on the road network and mitigation works have been identified where necessary.

I object to housing on greenfield sites in Redcar and Marske because these are our last open spaces close to, or among their housing estates. This is a human necessity in our increasingly nosier more congested town i.e. Miller Homes so close to Redcar Lane. Negative visual impact now compared to previously carefully planned estates on this Lane.

Officer response:

The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. Part of the site is previously developed land as it was occupied by school buildings. Designated open spaces will continue to be protected under Policy N2.

DLP274**Full Name:****Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Newcomen Primary School (H3.15) - this item should be removed from the plan as the housing construction has already started. This development should never have been allowed to proceed whilst there continues to be a shortage of playing pitches in Redcar. The same mistake should not be allowed to occur again.

Officer response:

The site has planning permission and is under construction. The amount of school playing fields on the site increased overall as a result of the development - there has been no loss of playing fields as a result of the school redevelopment and the housing site.

DLP820**Full Name:** Mr Dave McGuire**Organisation:** Sport England**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Sport England was involved in the redevelopment of Newcomen School as a statutory consultee and was content with the school's new build, and release of this site for housing subject to conditions which secured the reprovision of playing field and community use of the site. Sport England now understands that the community use condition has not been followed through and that the extent of the allocation is greater than that envisaged as part of the school development planning application.

Officer response:

The school playing fields increased overall as a result of the development - there has been no loss of playing fields as a result of the school redevelopment and the housing site. A community use agreement has been in place for the school since 2003. The planning application for the original school site stated an area for disposal for residential use of 7082sqm. A total of 7067sqm of land was formally disposed of by the Council for the residential use, which is consistent with the planning permission.

Section/Policy**Policy H 3.16****Land adjacent Errington School, Marske****DLP672****Full Name:** Mr S Cooney**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

We oppose any more development to our "village" of Marske-by-the-Sea. The greenfield and brownfield sites should remain as they are to protect the environment, agriculture and wildlife. The existing Sustainable Urban Drainage System (SUDS) cannot cope with the current excess run-off water, so the installation of more of these huge collection tanks to facilitate the proposed development will surely cause more release of run-off water causing high risk of flooding to the majority of Marske which is geographically lower than the proposed development site. This again is a risk to the environment and human health. Unemployment in the area is already above the national average, so more housing, more people, more unemployment. Where are the jobs going to be created? Is this proposed development just council greed? More housing, more people, more revenue from rates, etc.

Officer response:

The site has planning permission for 14 dwellings. Northumbrian Water were consulted on the planning application and did not raise any concerns regarding surface water drainage on the site. The plan seeks to support economic growth and job creation throughout the borough.

DLP273**Full Name:** Mr S Mitchell**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Organisation: Conservative Group
Agent Name:
Agent Organisation:
Submission type: E-Mail
Agree with section?: No

Comment summary:

A further urbanisation is proposed in the development at Grove Hill, west of Pine Hills, Guisborough. It is stated, 6.167, to 'represent the most realistic opportunity to achieve a major urban extension to the town'. Guisborough is a market town and that is its strength, which makes it sustainable. Who decided that it is to be extended to become a major urban settlement? The site is promoted as 'entirely comprising executive-style detached dwellings'. There is sufficient of that type of housing already in Guisborough. The need lies with supported housing for older people, the numbers of which are growing in Guisborough, and which can be accommodated by the infill sites, which are in ideal locations. Further, 6.172 states 'Urban green space is particularly limited in the west of Guisborough', so the solution suggested by the authors of the Draft Plan, is to build on another greenfield site, but insist that within the estate there is 'formal open space provision. That proposition is beyond good sense.

Officer response:

The Council resolved to grant planning permission for 188 dwellings on the site in January 2014, subject to a Section 106 Legal Agreement. The principle of residential development on the site has therefore already been established. The policy has been amended so that it is consistent with the planing application.

Comment summary:

This policy allocates up to 350 dwellings at land at Galley Hill Farm, Guisborough, and that the development of the site will be subject to a detailed transport assessment and the provision of suitable vehicular access from Stokesley Road. The need to understand the impacts of development and the requirements of supporting infrastructure need to be planned for upfront as part of the plan preparation process and should not be left to a planning application. This is particularly pertinent for strategic sites, which are critical to the delivery of the overall strategy. Without understanding the impact of development as part of the Plan preparation process, it is not possible to determine whether the transport infrastructure improvements and mitigation measures proposed in the Plan and the supporting Infrastructure Delivery Plan, are appropriately located and capable of addressing the impacts. Should additional mitigation measures be identified as being required in a Transport Assessment, which have not been planned for, these could potentially be solutions which are not viable, deliverable or capable of being funded, thereby affecting the soundness of the whole Plan. This position is supported by Paragraph 18 in Circular 02/2013: The Strategic Road Network and the Delivery of Sustainable Development, which states that: 'Capacity enhancements and infrastructure required to deliver strategic growth should be identified at the Local Plan stage, which provides the best opportunity to consider development aspirations alongside the associated strategic infrastructure needs. Enhancements should not normally be considered as fresh proposals at the planning application stage. The Highways Agency will work with strategic delivery bodies to identify infrastructure and access needs at the earliest possible opportunity in order to assess suitability, viability and deliverability of such proposals, including the identification of potential funding arrangements.' As stated in response to Policy H3, consideration of the Model Assessment Report along with the development of the Agency's Infrastructure study will assist with identifying the implications of the development proposals on the Strategic Road Network, along with any measures that may be required to support the development aspirations.

Officer response:

The site already has outline planning permission for up to 350 dwellings, therefore the principle of development has already been established. The application was supported by a detailed transport assessment and the impact of the proposals on the strategic road network was considered as part of the planning application process.

Section/Policy**Policy H 3.25****Whitby Avenue Field, Guisborough****DLP468****Full Name:** Ms Sarah Housden**Organisation:** North York Moors National Park**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** Yes**Comment summary:**

It is not considered that Policies H3.17 to H3.25 which relate to proposed housing allocations in and around Guisborough will have any harmful impact on the setting of the National Park.

Officer response:

Comment noted.

DLP765**Full Name:** Mr Alan Hunter**Organisation:** English Heritage**Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

Policy H3.25(a) refers to the 'adjoining' conservation area. The site is in fact encircled by the conservation areas and part of it lies within the conservation area. It is not clear that there has been any assessment of the significance of the following heritage assets, or that there has been any assessment of the impact of land allocations upon that significance. Nor can I find any commentary regarding the extent to which any harm to that significance is outweighed by public benefit - H3.25 setting of Guisborough Conservation Area. English Heritage is not yet satisfied, therefore, and the Council has not yet demonstrated, that it has identified clearly the significance of any heritage assets that may be affected by a proposed allocation, or carried out an assessment of the impact of development upon that significance. There appears to be little commentary regarding the extent to which any harm to that significance is outweighed by public benefit, taking account of the available evidence and any necessary expertise in accordance with the requirements of the NPPF.

Officer response:

A heritage assessment will be undertaken to further consider the potential impact of development; the policy will be amended accordingly. The policy already recognises the significance of the site in seeking to avoid development within the Conservation Area and achieving a sensitive and high quality development.

DLP821**Full Name:** Mr Dave McGuire**Organisation:** Sport England**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

2.1Ha site last used as playing field. There is currently a shortfall of 8 pitches across the pitch sports in Guisborough. The town cannot afford to lose playing field which help alleviate the shortage of playing pitches.

Officer response:

The site is not accessible to the public and has not been used a playing field for a number of years. There is currently an overprovision of five senior football pitches in Guisborough, which could be utilised to help meet the shortfalls in provision for junior and mini football pitches. Guisborough RFC are looking for a much larger site to be able to accommodate their requirements for additional rugby pitches.

Section/Policy**Policy H 3.25****Whitby Avenue Field, Guisborough****DLP1293****Full Name:****Organisation:** Gisborough Estates**Agent Name:** Kate McGill**Agent Organisation:** Nathaniel Lichfield & Partners**Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Gisborough Estate welcomes the allocation of the Whitby Avenue Field site for housing and the identification of the site as a highly sustainable location for development. The site relates well to the existing settlement pattern and represents a logical infill site within Guisborough. Any future development on the site will: be in keeping with the character and appearance of the local area; be respectful to the neighbouring Conservation Area; and avoid residential development in the eastern part of the site, which lies within Flood Zone 3. Should the development of the Whitby Avenue Field site affect the local Scout and Sea Cadet buildings on the western boundary of the site, Gisborough Estate will, where reasonable, make alternative premises available. Gisborough Estate, however, does not agree with the proposed yield from the site or the timescales for housing delivery proposed in Policy H3.25. The Policy states that the site could yield 32 dwellings. The site is c. 1.9 ha in total, with c. 1.8 ha within Flood Zone 1. Applying a density of 30 dwellings per hectare the site yield would be around 54 dwellings. Our Client requests that Policy H3.25 is updated to reflect this higher yield. The site is available for development now and there are no significant constraints that would prevent housing delivery within the next 5 years. In light of the fact that the Council do not have a 5 year supply, we suggest that timescales for delivery referred to in Policy H3.25 should be brought forward to 2014/15 - 2018/19.

Officer response:

The yield is a broad estimate but in addition to avoiding development in Flood Zone 3 and allow for the retention of open land to accommodate SUDS requirements, it is assumed that housing would be restricted to that part of the site which is outwith the Conservation Area boundary (the former playing field), in order to also minimise the impact of development on the character of the Conservation Area. This reduces the developable area to approximately one hectare. The phasing reflects the priority given to previously-developed land and sites with planning permission in seeking to achieve a balanced distribution of supply across the plan period.

DLP928**Full Name:** Michael Hoult**Organisation:** Highways Agency**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

The allocation of land for 32 dwellings at Whitby Avenue Field should not present any particular concerns for the Agency, given the scale of development proposed. However, the consideration of this site should be fully integrated into the evidence base assessments.

Officer response:

Comment noted. The site has been fully integrated into the evidence base assessments.

DLP720**Full Name:** Lucy Mo**Organisation:** Environment Agency**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Proposed housing allocation H3.25 is partly located within flood zones 3 and are therefore at risk from flooding. The Local Plan should seek to steer development away from areas at risk from flooding and provide evidence that a sequential approach to growth has been undertaken. Development located within these areas will need to be accompanied by a Flood Risk Assessment (FRA). The FRA will need to discuss all relevant factors of flood risk such as risk to the development, risk to the areas, flow routes, depths, finished floor levels etc. Any development on sites at risk from flooding will need to achieve the 100 year level plus climate change allowance for the lifetime of the development.

Officer response:

The policy recognises that part of the site is within flood zone 3 and indicates that development should avoid the Chapel Beck flood risk catchment area. The number of dwellings proposed acknowledges that only the southern part of the site outside of the flood risk area would be developed. The policy also indicates that a surface water management scheme would need to be delivered as part of the development.

Comment summary:

This policy allocates up to 262 dwellings at land at Church Hill, Skelton. Again, as stated in response to Policy H3.1, the need to understand the impacts of development and the requirements of supporting infrastructure need to be planned for upfront as part of the plan preparation process and should not be left to a planning application. This is particularly pertinent for strategic sites, which are critical to the delivery of the overall strategy. Without understanding the impact of development as part of the Plan preparation process, it is not possible to determine whether the transport infrastructure improvements and mitigation measures proposed in the Plan and the supporting Infrastructure Delivery Plan, are appropriately located and capable of addressing the impacts. Should additional mitigation measures be identified as being required in a Transport Assessment, which have not been planned for, these could potentially be solutions which are not viable, deliverable or capable of being funded, thereby affecting the soundness of the whole Plan. This position is supported by Paragraph 18 in Circular 02/2013: The Strategic Road Network and the Delivery of Sustainable Development, which states that: 'Capacity enhancements and infrastructure required to deliver strategic growth should be identified at the Local Plan stage, which provides the best opportunity to consider development aspirations alongside the associated strategic infrastructure needs. Enhancements should not normally be considered as fresh proposals at the planning application stage. The Highways Agency will work with strategic delivery bodies to identify infrastructure and access needs at the earliest possible opportunity in order to assess suitability, viability and deliverability of such proposals, including the identification of potential funding arrangements.' As stated in response to Policy H3, consideration of the Model Assessment Report along with the development of the Agency's Infrastructure study will assist with identifying the implications of the development proposals on the Strategic Road Network, along with any measures that may be required to support the development aspirations.

Officer response:

Planning permission has already been granted for the development. All material planning considerations, including highways impacts, were considered as part of the planning application process. Construction has now started on site and therefore the site will be removed as a proposed allocation and included in table 5 as a commitment instead.

Section/Policy**Policy H 3.27****Home Farm, Skelton****DLP772**

Full Name: Mr Alan Hunter
Organisation: English Heritage
Agent Name:
Agent Organisation:
Submission type: Letter
Agree with section?: No

Comment summary:

Policy H3.27 - associated commentary informs that the site lies within the conservation area and adjacent to the grade II* listed All Saints' Church. We are also informed that the character appraisal for the conservation area identifies Home Farm as being amongst the most important groups of buildings. This being the case, the redevelopment of the site cannot satisfy Policy HE1(e) of the Plan because demolition in a conservation area will, we are told, only be permitted if the building makes no significant positive contribution to the architectural or historic character of the conservation area'. Paragraph 138 of the NPPF advises that the loss of a building which makes an important and positive contribution to the significance of a conservation area should be treated as substantial harm. By way of illustration, it is not clear that there has been any assessment of the significance of the following heritage assets, or that there has been any assessment of the impact of land allocations upon that significance. Nor can I find any commentary regarding the extent to which any harm to that significance is outweighed by public benefit - H3.27 direct and indirect impacts on Skelton Conservation Area and All Saints Church - grade II*. English Heritage is not yet satisfied, therefore, and the Council has not yet demonstrated, that it has identified clearly the significance of any heritage assets that may be affected by a proposed allocation, or carried out an assessment of the impact of development upon that significance. There appears to be little commentary regarding the extent to which any harm to that significance is outweighed by public benefit, taking account of the available evidence and any necessary expertise in accordance with the requirements of the NPPF (see letter for full comments).

Officer response:

A heritage assessment will be undertaken and the policy will be amended as necessary.

Greenfield sites should not be used for development until such time as all other sites have been exhausted. Any future development should include bungalows for the elderly.

Officer response:

The Council has prioritised the development of brownfield sites. Greenfield sites have only been allocated for development where there are no suitable or viable previously developed sites available to meet identified housing needs. The need to provide housing for older people has been considered in the Local Plan with sites identified to help meet this housing need.

DLP773**Full Name:** Mr Alan Hunter**Organisation:** English Heritage**Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

Policy H3.30(h) - we are informed that resolution of archaeological matters is to be achieved on this site, but not before its development is found to be acceptable by being allocated. Without an understanding of the significance of the archaeology, and an assessment of the impact of development upon that significance, the Council is not able to say that the public benefits outweigh the possible harm to the historic environment.

Officer response:

The policy identifies the potential for the site to have some valuable archaeological deposits and indicates that appropriate measures to preserve any remains should be agreed and undertaken prior to the development taking place. This would accord with Policy HE3. On the basis of current information we are confident that archaeological matters would not stop the development of the site, subject to appropriate mitigation.

DLP933**Full Name:** Michael Hoult**Organisation:** Highways Agency**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

As stated in response to Policy H3, consideration of the Model Assessment Report along with the development of the Agency's study will assist with identifying the implications of the development proposals on the Strategic Road Network, along with any measures that may be required to support the development aspirations.

Officer response:

The Modelling Assessment Report identifies that highway infrastructure improvements will be necessary by 2030 on the A174 around the Skelton and Brotton area if the forecast development traffic from housing sites is to be accommodated without having a detrimental effect on the existing network conditions. Additional work is needed on this, including the identification of highways improvements through the infrastructure plan, where necessary.

Comment summary:

Brotton has and is seeing new housing built on new estate off Newbury Road (Hunley Manor Phases 1&2) so development of Kilton Lane site should be left to years 2018 or later. The site was originally left as a Buffer Zone between the Bypass and housing whilst we recognise that this is now not going to be sustainable we would make the following points: No development should take place until problems raised by Northumbrian Water in relation to Sewerage infrastructure which is operating at near capacity is resolved. The roundabout on junction with Kilton Lane has poor site lines and these should be addressed prior to any building taking place also entrance to housing site should be by conventional junction not a new roundabout as there is a build out with a speed hump just some 20 yards from possible entrance. We have a good mix of types and styles in Brotton and with each new developments the older estates are becoming the affordable houses but have a lack of good quality designed 4 & 5 bedroom detached houses and 3 bedroom bungalows. We do not need a financial contribution towards additional burial space as Church has spare Councils blouses on this by opening up the ground around the Church for burials. Agree with provision of screening and additional open space on Kilton Lane housing site also archaeological issues will need to be resolved. Where housing gain is raised believe there needs to be significant amount invested in town or village in which new build has taken place.

Officer response:

The phasing reflects the desire to complete existing outstanding commitments prior to development taking place on this site. The Policy recognises the potential for archaeological remains on the site and indicates that appropriate measures should be agreed for their preservation, prior to development taking place. The policy already acknowledges the requirement for a transport assessment to be prepared and a new junction provided at Kilton Lane, along with any other necessary highway works. These matters will be resolved at the planning application stage. The proposals will be expected to provide a mix of housing to meet identified needs. The Tees Valley SHMA identifies that there is a need for additional affordable housing within Brotton and it is therefore expected that the development will contribute towards meeting these identified housing needs, in accordance with Policy H4. It is acknowledged that there is no longer a need for additional cemetery provision in Brotton and the policy has been amended to reflect this. Section 106 agreements will be agreed with the developer to fund any necessary infrastructure or community benefits required as a consequence of development in accordance with Policy SD5.

Comment summary:

1) Site lines onto Bypass require improvement for site lines for vehicles coming from Skelton side of Roundabout. 2) No need for extra Roundabout at Entrance to site as Build out and speed hump some 20 metres away so just a plain junction should be enough. 3) Northumbrian Water need to have Sewerage and Drainage upgraded before any development takes place due to system been almost at capacity. 4) We need Executive Housing in Brotton as there is a shortage of good design 4 - 5 Bedroom properties and outer housing should be Bungalows in line with all other Estates preferably 3 bedroom quality housing. 5) With all building that has taken place in previous years the older Estates now provide plenty of affordable housing supply. 6) Because of House building site still been completed this site should only be released in later stages of the plan. 7) Archaeology should be checked as supposed to be site of interest. 8) High Street Regeneration is something that really needs looked into such as possible development of Station Yard as new shopping site. 9) Housing Gain Money or Section 106 should be used to provide a Community Building for top end of Brotton as Church centre is in Danger of Closing and this is a well-used facility for local groups and clubs possible site Old Kiltondale Home Site this could easily accommodate a Building, Car parking, and Muga. This would cater for lack of leisure facilities in Brotton.

Officer response:

The policy already acknowledges the requirement for a transport assessment to be prepared and a new junction provided at Kilton Lane, along with any other necessary highway works. These matters will be resolved at the planning application stage. The policy recognises the sewerage treatment capacity issues in the area and indicates that these would need to be resolved as part of any development. The proposals will be expected to provide a mix of housing to meet identified needs. The Tees Valley SHMA identifies that there is a need for additional affordable housing within Brotton and it is therefore expected that the development will contribute towards meeting these identified housing needs, in accordance with Policy H4. The phasing reflects the desire to complete existing outstanding commitments prior to development taking place on this site. The Policy recognises the potential for archaeological remains on the site and indicates that appropriate measures should be agreed for their preservation, prior to development taking place. Brotton local centre has been included within the retail hierarchy and will continue to remain the focus for town centre uses within the local area. The Station Yard site is included within the local centre boundary and would be supported for retail use in principle. Section 106 agreements will be agreed with the developer to fund any necessary infrastructure or community benefits required as a consequence of development in accordance with Policy SD5.

Comment summary:

Raise concerns over the phasing of development. The Local Plan proposes that the vast majority of development should not take place until post 2023/24. TWNY would urge the Council to reconsider the proposed phasing and implementation arrangements by bringing forward the development of the site to 2014/15. Given the suitability of the site, there is no logical basis for the suggested phasing of development given the pressing need for the Council to deliver housing in the short term in line with the NPPF's requirement for Local Planning Authorities to significantly boost the supply of housing (Para 47).

Officer response:

The Council is allocating sufficient sites within the first phase to significantly boost the supply of housing in accordance with the NPPF. The phasing shown is indicative but takes into account the priorities given to existing housing commitments and the development of brownfield sites and other land in more sustainable locations and in seeking to provide a balanced housing supply across the plan period. The site could come forward for development earlier if local demand permits and it would not hinder the delivery of existing commitments.

Agree with section?: In Part

Comment summary:

Policy H4 requires a minimum of 15% on-site affordable housing provision in all areas other than Great Eston North. BDW supports the approach to respond to the findings of viability study, but has concerns following a review that the 15% requirement will render large sites unviable when considered alongside the Â£500 per unit s106/278 contributions. This issue is of particular importance when we consider that sites of Galley Hill, Marske and West of Pine Hills will be liable to such contributions when they account for more than a quarter of the total requirement. As mentioned earlier, the viability study does not account for the full costs of the plan. When these costs are cumulated it will further decrease the viability of such schemes.

Officer response:

The Whole Plan Viability study makes clear that development in the borough, outside Greater Eston North, remains viable whilst paying for affordable housing and Â£500 per unit S106/278 contributions. Of the three sites mentioned, with potentially higher S106/278 costs, two of these have already secured planning permission, with S106 agreements in place for affordable housing in line with Policy H4. The planning process for the third site is currently ongoing.

Section/Policy**Policy H 4****Affordable Housing**

DLP643**Full Name:** Mr Ben Stephenson**Organisation:** Persimmon Homes Teesside**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

The plan proposes a 15% affordable housing provision on all sites of gross 15 dwellings or more. An initial assessment of this figure appears to be acceptable in principle but the council should ensure this is deliverable across all sites following the concerns raised regarding development contributions and the findings of the 'Whole Plan Viability Testing' report. Where concerns around viability arise, the policy states that the council will negotiate the final figure based upon the submission of a full viability appraisal by the developer. This is welcomed by Persimmon Homes but as the HBF representations point out, this should not be used as a mechanism to retain an unsustainable policy. It is therefore important that the council ensure that the affordable housing provision is achievable across all sites within the borough. One of the significant concerns of Persimmon Homes around Affordable Housing is centred on the inflexible approach proposed by the Council towards tenure types. Policy H4 states: 'Where the affordable housing requirement is fewer than 10 units, all of the affordable housing shall be provided as social rented or affordable rented housing'. Due to the development cost associated with discounted rent over discounted home ownership, it is the view of Persimmon Homes that this policy is restrictive and does not provide the flexibility required in Paragraph 50 of the NPPF which states that where a need for affordable housing has been identified, 'policies should be sufficiently flexible to take account of changing market conditions over time'. It is therefore suggested that the council employ a flexible approach to ensure that the viability of sites is not jeopardised, particularly on smaller sites, by negotiating the final tenure on a site by site basis. This will allow sites which may otherwise be considered unviable to come forward and provide a sufficient and constant supply of affordable units in line with the Local Plan requirements.

Officer response:

The Whole Plan Viability study makes clear that development in the borough, outside Greater Eston North, remains viable whilst paying for affordable housing. However, Policy H4 also makes clear that where, on an individual site, the developer believes that provision of affordable housing in accordance with policy would make development unviable, a viability assessment can be submitted, showing the maximum level of affordable housing that can be achieved.

DLP523**Full Name:** Matthew Good**Organisation:** Home Builders Federation Ltd**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

The policy seeks a minimum 15% affordable housing on sites of 15 or more and a financial contribution from smaller developments. Whilst this level appears generally acceptable, the HBF is concerned that if it is applied across the whole of the plan area it could place the delivery of some of the sites at risk. The Council's "Whole Plan Viability Testing" report identifies that such a level will not be achievable in the lower market areas, policy H4 does respond to this by exempting development within Greater Eston North from such contributions, the HBF support this approach. However, once the affordable housing contributions are combined with section 106 / 278 requirements of £2,800 per unit, the larger development sites become unviable. Given that the sites of Galley Hill, Marske and West of Pine Hills will all be liable to pay such a requirement, this is problematic for the plan as they will account for more than a quarter (1,150 dwellings) of the overall proposed housing requirement within the plan (4,050 dwellings). The situation is made worse, because as referred to above, the viability report does not take full account of cumulative policy implications of the plan and the nominal £500 per unit allotted to section 106 / 278 requirements appears to be an under-estimate. The Council are therefore likely to be left with a stark choice of either prioritising affordable housing and foregoing other policy requirements or lowering the affordable housing contributions on the larger sites or quite possibly across the whole of the plan area. The policy identifies that where viability issues are raised the Council will negotiate based upon the submission of a full viability appraisal by the developer. Whilst such an approach is generally supported, it should not be used as a mechanism to retain unsustainable policies. It is incumbent upon the Council to ensure that policies are sustainable in the majority of cases with such negotiations reserved for a handful of cases. The policy seeks 70% of the affordable housing to be social rented. The development costs associated with discounted rent is greater than that for discounted home ownership. It is therefore suggested that the Council takes a flexible approach to such requirements to ensure development viability can be maintained across the whole of the plan area.

Officer response:

The Whole Plan Viability study makes clear that development in the borough, outside Greater Eston North, remains viable whilst paying for affordable housing and £500 per unit S106/278 contributions. Of the three sites mentioned, with potentially higher S106/278 costs, two of these have already secured planning permission, with S106 agreements in place for affordable housing in line with Policy H4. The planning process for the third site is currently ongoing. Policy H4, as drafted, reflects evidence that the highest unmet need is for rented housing. It does allow, however, for a proportion of intermediate housing to also be provided. As stated above, the Whole Plan Viability study states that development in the borough, outside Greater Eston North, remains viable whilst paying for affordable housing. However, Policy H4 also makes clear that, where the provision of affordable housing in accordance with policy would make an individual scheme unviable, a viability assessment can be submitted, showing the maximum level of affordable housing that can be achieved.

The proposed minimum requirement of 15% affordable housing on sites of 15 units or more appears to be generally acceptable. However, it is important to ensure that Policy H4, as currently worded, retains the opportunity for an applicant to challenge the affordable housing requirement on viability grounds (subject to the submission of a viability assessment) in order to ensure that housing sites come forward to meet the housing land requirement unhindered by levels of affordable housing which deem sites unviable. Further, Policy H4 seeks 70% of the affordable housing to be social rented. The development costs associated with this tenure is greater than that for discounted home ownership. It is therefore recommended that the Council take a flexible approach to affordable housing mix to ensure development viability can be maintained across the whole of the plan area.

Officer response:

Policy H4, as drafted, reflects evidence that the highest unmet need is for rented housing. It does allow, however, for a proportion of intermediate housing to also be provided. The Whole Plan Viability study states that development in the borough, outside Greater Eston North, remains viable whilst paying for affordable housing. I welcome the recognition of need to see that there is decent housing 'for all', and that this includes development of socially rented housing as well as affordable home for purchase. The Local Plan should also emphasise the continuing need for refurbishment and modernisation of existing social landlord stock in the Borough.

Officer response:

Comments noted. The Draft Local Plan is closely associated with the Council's housing strategy, which includes a key objective to ensure continued investment and improvement in the registered provider stock in the borough.

DLP1365**Full Name:** Aidan Hamilton**Organisation:** Bellway Homes (NE Division)**Agent Name:** Alexandra Crowe**Agent Organisation:** Nathaniel Lichfield & Partners**Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

In line with the NPPF (para 50), Bellway supports the inclusion of paragraph 7 in Policy H4, which acknowledges that, in certain circumstances, schemes will not be able to deliver the affordable housing requirement defined in the Policy for viability reasons. Bellway does not however support paragraph 3, which they consider to be overly prescriptive, dictating what type of affordable housing should be provided on site. We consider that, as drafted, the policy does not offer sufficient flexibility to deal with the changing affordable housing needs across the Borough over the plan period, nor does it take into account viability. We therefore recommend that the policy be reworded to delete the prescriptive requirements and to provide more flexibility.

Officer response:

The LEP would fully support the aims of this policy as contributing towards the creation of a balanced and varied housing market offering choice to all levels of society. It is suggested that further guidance be given in respect of viability, for example the type of viability assessment required, how it will be assessed and by who? Paragraph 6.234 gives the gross figure in the SHMA. The net figure is in fact 97, the second lowest in the Tees Valley. Although accepting that the available evidence indicating a need for additional affordable housing in the villages is not currently available, it is suggested that a formal rural exemption policy should be included in the actual policy statement to cover future eventualities.

Officer response:

The gross affordable housing figures are more relevant, as they demonstrate the imbalances within the existing housing stock. A rural exception policy is included within the draft policy.

DLP390**Full Name:****Organisation:** West Midlands
Metropolitan Authority
Pension Fund**Agent Name:** David Staniland**Agent Organisation:** Knight Frank LLP**Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Our client considers that Policy H 4 should be more flexible and the Council should be open to offsite contributions towards existing housing stock, which could help meet other objectives. Paragraph 173 of the NPPF suggests that, to ensure viability, the costs of any requirements likely to be applied to development, such as requirements for affordable housing, should, when taking account of the normal cost of development and mitigation, provide competitive returns to a willing land owner and willing developer to enable the development to be deliverable. In line with the NPPF, affordable housing should always be subject to viability and needs to be balanced against other requests for contributions to deliver housing. Policy H 4 should not be a constraint on development and should be in line with the Plan Priority to develop great places to live through a good range and quality of housing.

Officer response:

The Council views the provision of affordable housing on-site as desirable in most instances, in order to assist with the delivery of balanced communities. The circumstances whereby an off-site contribution might be acceptable are clearly set out within Policy H4. The Whole Plan Viability study states that development in the borough, outside Greater Eston North, remains viable whilst paying for affordable housing. However, Policy H4 also makes clear that, where the provision of affordable housing in accordance with policy would make an individual scheme unviable, a viability assessment can be submitted, showing the maximum level of affordable housing that can be achieved.

DLP287**Full Name:** Mrs Linda Daniel**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

The coastline connecting Redcar, Marske and Saltburn supports the same birdlife, flora and fauna, as does the landscape surrounding them, so are important in sustaining one another. They should together be regarded as Sensitive areas to be protected from further development. Each also contains a conservation area and Marske between them is a place of earlier historic interest. Any further development on the outskirts of each of these places would destroy both the character and the views approaching them that contain visible sights of landmark buildings that define them, apart from the beautiful historic country field and wooded landscape surrounding them.

Officer response:

The landscape character assessment has led to a classification of the rural landscape into two categories, 'Sensitive Landscapes', in which much landscape structure is present to give high 'strength of character' which is sensitive to change; and 'Restoration Landscapes', where the land has lost a greater or lesser degree of landscape structure and would benefit from measures to restore that structure and character. Based on the evidence of the Landscape Character assessment, the coastline of Marske is identified as a sensitive landscape area. The area to the south of Marske and a number of smaller areas to the north were identified as restoration landscape areas on the basis that the land has lost a degree of landscape structure and would benefit from measures to restore that structure and character. It is therefore considered inappropriate to redesignate these areas as sensitive landscape. Development Limits, as outlined in policy SD3, will also protect land outside of settlement limits from inappropriate development.

Comment summary:

Beacon Moor should be included as a local green space. This could never be interpreted as an "expansive tract of land" as the area referred is only those few acres to which the public have access for recreational purposes, which has been explained in my previous representations and no doubt by others and which is severed by the Errington Woods to the North and nearby Upleatham Village boundary and conservation area, virtually only 300 metres or so away, to the South. Feel that a sensitive landscape designation will not offer sufficient level of protection from development. This is simply a policy, which could be overruled or cancelled and would like the site to have a statutory designation. The Council has been provided with an abundant amount of evidence to justify the sites inclusion as a local green space and including how it meets all of the qualifying criteria.

Officer response:

Comment summary:

Policy does not allow for any development in the Heritage Coast as it states development can cause no harm. This should be revised provide greater flexibility for the Officer to decide whether the level of harm would be acceptable in that location. The York Potash proposals would be in a restoration landscape area. The requirement to repair or reinstate the landscape is tentatively supported, subject to a greater understanding of these actions. For example the proposed pipeline would conflict with tree planting above it. Under para 7.8 the special qualities of the North York Moors National Park are to be protected and this is explained, partly, as 'landscape setting' and this concept has been explored in other developments that are in close proximity to the National Park (Moorland Energy Limited - Gas Processing Facility).

Officer response:

The NPPF states that local planning authorities should maintain the character of the undeveloped coast, protecting and enhancing its distinctive landscapes, particularly in areas defined as Heritage Coast. Therefore, in accordance with the NPPF, N1 aims to protect the undeveloped special character of the Heritage Coast through only permitting development in exceptional circumstances and ensuring that they are designed and sited so as to cause no harm to its special character. It is therefore concluded that the existing policy approach is appropriate. Opportunities for repair and reinstatement of landscape structure could include measures such as tree planting or hedgerow restoration as appropriate to the site and development.

We believe that the Local Plan should designate Beacon Moor as Local Green Space. The National Planning Policy Framework states that local communities through Local Plans, should be able to identify for special protection, green areas of particular importance to them by describing each as Local Green Space, thereby ruling out new developments other than in very special circumstances. Beacon Moor (located between New Marske and Upleatham Village), is currently designated as Sensitive Landscape but we believe that it should be designated as a Local Green Space, thus providing even greater protection from undesirable developments.

Officer response:

In preparing the draft Local Plan we felt that the land at Beacon Moor was sufficiently protected from development through a combination of other policies, namely that it is outside development limits and within a defined sensitive landscape area. As such, development would only be acceptable in very special circumstances, as is the case with land designated as local green space. In addition, our understanding of local green spaces led us to conclude that this land may not meet the designation criteria set out in the NPPF; in particular because we think this would be classified as an 'extensive tract of land'. We have reviewed this position in light of comments received on the draft Local Plan, however as no definitive site boundaries have been submitted to support the Local Green Space designation we maintain that Beacon Moor would be classified as an 'extensive tract of land' and as such does not meet the NPPF designation criteria.

DLP555**Full Name:** Mrs Linda Daniel**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

I believe that such a designated 'Strategic Gap' area as the unique, more unspoiled natural seaside, and farmland area serving as the 'countryside' surrounding and identifying Marske, with its higher woodland hill backdrop (also significant for Redcar, New Marske and Saltburn) should instead be designated a Sensitive Landscape area. Marske is situated between a Heritage coastal site at Saltburn and a 'Ramsar' Cleveland coastal site at Coatham. Although each are unique, they share same beach and natural attributes for wildlife. Applying the holistic approach the council have stated they want to use, designating the area as a Sensitive Landscape Area would make complete sense.

Officer response:

The landscape character assessment has led to a classification of the rural landscape into two categories, 'Sensitive Landscapes', in which much landscape structure is present to give high 'strength of character' which is sensitive to change; and 'Restoration Landscapes', where the land has lost a greater or lesser degree of landscape structure and would benefit from measures to restore that structure and character. Based on the evidence of the Landscape Character assessment, the coastline of Marske is identified as a sensitive landscape area. The area to the south of Marske and a number of smaller areas to the north were identified as restoration landscape areas on the basis that the land has lost a degree of landscape structure and would benefit from measures to restore that function. It is therefore considered inappropriate to redesignate these areas as sensitive landscape. Development Limits, as outlined in policy SD3, will also protect from inappropriate development outside of settlement limits.

DLP469**Full Name:** Ms Sarah Housden**Organisation:** North York Moors
National Park**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

The reference in Policy N1 to protecting the landscape setting and scenic beauty of the National Park is greatly welcomed by the Authority and will provide a stronger policy base for assessing the impact of proposed developments that are close to the National Park boundary and could harm the setting of the Park. However, the policy could be strengthened by removal of the word 'inappropriate' which is not defined and open to interpretation and as worded the policy could imply that 'appropriate' development that impacts on the landscape and scenic beauty of the Park would still be permitted. The phrase 'significant impact' is also open to interpretation. We would be happy to suggest some amended wording for Policy N1 to address the above comments.

Officer response:

The policy will be updated to give high importance to protecting the landscape setting, scenic beauty and special qualities of the North York Moors National Park.

Section/Policy**Policy N 2****Green Infrastructure****DLP216****Full Name:** Mr Keith Simpson**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** Yes**Comment summary:**

Support the protection of strategic gaps between Marske and New Marske; and Marske and Saltburn, but fear that this policy is at variance with other statements in the plan, particularly the development of a major new housing site at Marske Inn Farm. The proposals for this will reduce the gap between Marske and New Marske to little more than the width of the by-pass.

Officer response:

The aim of strategic gaps is to ensure that the conurbation settlements do not coalesce with surrounding settlements, to help maintain their identity. Although the A174 will establish a definitive settlement boundary at Marske, the development of the Marske Inn Farm site will inevitably reduce the distance between the built-up areas. Therefore, in mitigation, Policy H3.1 requires the landscaping scheme as part of any development of the Marske Inn Farm site to incorporate a deep planting buffer along the southern boundary to reinforce the strategic gap with New Marske in order to retain the separate identity of the two settlements.

DLP1256**Full Name:** England & Lyle
(private clients)**Organisation:****Agent Name:** Mr Ian Lyle**Agent Organisation:** England & Lyle**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Object to the extent of the Green Wedge between East Middlesbrough and Eston/Ormesby/Normanby. The extent of the green wedge has just been carried over from the LDF and no review of the its boundaries has been undertaken. There have been physical changes to the green wedge as a result to new housing at High Farm to the north, which warrants a review of its extent. Further land at High Farm could be allocated for housing without significantly reducing the gap between Teesville and Thorntree.

Officer response:

The approach of separating our settlements through the use of Green Wedges and Strategic Gaps was reviewed as part of Local Plan preparation. Their continued use was considered to be appropriate as they had been successful in retaining the separation of settlements and preventing coalescence, and form an important part of the borough's green infrastructure. We have assessed development sites and in some circumstances considered that limited development could be achieved through revising their extents without compromising the overall aims of the policies. This site was not considered as a potential allocation in the draft plan as it is currently the subject of an extant planning consent to provide community woodland as part of the current High Farm development. Creation of this woodland would enhance the green infrastructure in this location, and its multiple benefits. It is considered that housing development in this area would have an unacceptable impact on the Green Wedge and compromise its function as an open area which delineates distinct communities, and separates Middlesbrough and Redcar & Cleveland Borough Council areas. It would also have an unacceptable impact on its value for local amenity, recreation and wildlife.

DLP1242**Full Name:** Mr Bob Moodie**Organisation:** New Marske
Residents Association**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

I was concerned that the corridors between the local towns/villages were reducing and would have liked to have seen a more definitive barrier to prevent further encroachment to what is currently being proposed, such as 'green wedges' and not just a landscaped corridor. This mainly applies to Marske/New Marske and Marske/Saltburn. There is a small green wedge between Marske and Redcar. We are concerned with the possible closing of the strategic gap that currently exists between Marske and New Marske should the major development go ahead to build new homes to the south side of Marske, bordering the A174 by-pass road.

Officer response:

The purpose of Strategic Gaps is to ensure that the conurbation settlements do not coalesce with surrounding settlements, to help maintain their identity. The emphasis, therefore, is on maintaining openness and landscape quality over a larger swath of land. Green wedges are more defined open areas within the conurbation which provide buffers between different uses and communities, and are valuable for local amenity, recreation and wildlife in the urban area. As such it is possible to identify the extent of these areas on a map in a way which would be inappropriate for Strategic Gaps. The location of Strategic Gaps are however identified diagrammatically on the Local Plan Key Diagram. Although the A174 will establish a definitive settlement boundary at Marske, the development of the Marske Inn Farm site will inevitably reduce the distance between the built-up areas. Therefore, in mitigation, Policy H3.1 requires the landscaping scheme as part of any development of the Marske Inn Farm site to incorporate a deep planting buffer along the southern boundary to reinforce the strategic gap with New Marske in order to retain the separate identity of the two settlements.

Comment summary:

Object to the DLP's identification of the High Farm site beyond that already granted planning consent for housing to remain as a Green Wedge. In GVA's view, the requirement to ensure full, objectively assessed housing needs outweighs out of date policies of constraint such as Green Wedges which were identified in the context of very different development requirements than those which exist today. That said, even with the proposed housing allocations at High Farm, the remaining Green Wedge can continue to perform its strategic role and function and satisfy policy N2. We note the principle of draft policy N2 and agree that Green Infrastructure should help to integrate development with the surrounding townscape and landscape; however this should not be to the extent that housing needs cannot be met.

Officer response:

The approach of separating our settlements through the use of Green Wedges and Strategic Gaps was reviewed as part of Local Plan preparation. Their continued use was considered to be appropriate as they had been successful in retaining the separation of settlements and preventing coalescence, and form an important part of the borough's green infrastructure. Section/Policy**Policy N 2****Green Infrastructure****DLP403****Full Name:** Emma Thornton**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Policy N2 states that green wedges and strategic gaps will be protected and that the protection, enhancement, creation and management will be supported. However, development is planned on good agricultural land around all of these areas. Why when you state there is a good supply of brownfield land? The policy is contradicted by planned developments at Marske Inn Farm and Windy Hill. Strategic gaps which prevent the conurbation and surrounding settlements from coalescing, strategic landscape areas, public rights of way, and other walking and cycling routes, which the Plan claims to protect, all threatened by the aforementioned planned developments.

Officer response:

Whilst the priority has been to accommodate new development on previously developed land and within existing settlements, in order to meet the identified housing need within the Borough and provide sufficient deliverable sites, it has been necessary to revise development limits to accommodate some development on the edge of existing settlements. However, as part of these developments/proposed developments, separation between the Borough's settlements has been maintained. The aim of strategic gaps is to ensure that the conurbation settlements do not coalesce with surrounding settlements, to help maintain their identity. Although the A174 will establish a definitive settlement boundary at Marske, the development of the Marske Inn Farm site will inevitably reduce the distance between the built-up areas. Therefore, in mitigation, Policy H3.1 requires the landscaping scheme as part of any development of the Marske Inn Farm site to incorporate a deep planting buffer along the southern boundary to reinforce the strategic gap with New Marske in order to retain the separate identity of the two settlements. It is therefore believed that this development can be accommodated whilst retaining distinctiveness between the settlements in accordance with Policy N2. Provision of highly accessible community green spaces, improved walking and cycling links, retention of the Public Right of Way at the northern boundary of the site and an appropriate landscape assessment will all be required as part of any development proposals. No development at Windy Hill is proposed in the Local Plan.

DLP211**Full Name:** Mr S M White**Organisation:** Campaign for the Protection of Rural England (CPRE)**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

If this is the Council's true aim then why the urban sprawl that has brought Marske so close to Redcar and threatens to do the same between Marske and New Marske and has plagued, and continues to plague, Guisborough? Point b supports the enhancement of strategic gaps between Marske/New Marske and Marske/Saltburn but inconsistent with this is Policy 3.1 which would do the opposite in relation to Marske/New Marske and para.2.15 which seeks to prevent uncontrolled urban sprawl. Also, why threaten the rights of way on Eston Hills and views from the Cleveland Way with gigantic wind turbines?

Officer response:

Whilst the priority has been to accommodate new development on previously developed land and within existing settlements, in order to meet the identified housing need within the Borough and provide sufficient deliverable sites, it has been necessary to revise development limits to accommodate some development on the edge of existing settlements. However, as part of these developments/proposed developments separation between the Borough's settlements has been maintained. The aim of strategic gaps is to ensure that the conurbation settlements do not coalesce with surrounding settlements, to help maintain their identity. Although the A174 will establish a definitive settlement boundary at Marske, the development of the Marske Inn Farm site will inevitably reduce the distance between the built-up areas. Therefore, in mitigation, Policy H3.1 requires the landscaping scheme as part of any development of the Marske Inn Farm site to incorporate a deep planting buffer along the southern boundary to reinforce the strategic gap with New Marske in order to retain the separate identity of the two settlements. There are no specific proposals for wind turbine development within the Local Plan. Policy SD6 sets out a number of criteria against which any proposals for wind turbines would be assessed.

DLP546**Full Name:** Gladedale Estates Ltd**Organisation:** Signet Planning**Agent Name:** John Wyatt**Agent Organisation:** Signet Planning**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Policy N3 presently requires all housing developments to make a contribution towards open space, sport, recreational and community facilities to serve and support the site. It is considered that this current approach is contrary to the provisions of paragraph 204 of the NPPF. In areas having a surplus of contributions of open space, contributions should only be sought where the proposed development would lead to a deficit by virtue of its scale or location. In light of this reference to such circumstances needs to be incorporated within Policy N3.

Officer response:

Comment noted. Wording will be amended accordingly to make clear that provision, or an off-site contribution, will be not be required where it can be demonstrated that there is already sufficient provision to meet current needs, as well as those expected to arise from new development, in terms of access, quantity and quality.

Section/Policy**Policy N 3****Provision of Open Space, Leisure and Community Facilities****DLP524****Full Name:** Matthew Good**Organisation:** Home Builders Federation Ltd**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

The policy identifies that off-site contributions towards open space will be sought in some instances. Such an approach may be contrary to NPPF paragraph 204 as well as the CIL regulations. The policy also does not consider areas of current surplus open space provision, as indicated through an up to date open space audit. In instances of surplus, contributions towards open space should only be sought where the proposed development would lead to a deficit by virtue of its scale or location. It is therefore recommended that the Council reconsider the wording of the policy in light of the CIL regulations and identify that in areas of surplus open space contributions will not be sought.

Officer response:

Comment noted. Wording will be amended accordingly to make clear that provision, or an off-site contribution, will be not be required where it can be demonstrated that there is already sufficient provision to meet current needs, as well as those expected to arise from new development, in terms of access, quantity and quality.

DLP1349**Full Name:** Mr Steve Wharton**Organisation:** Northumbrian Water Ltd**Agent Name:** Kate McGill**Agent Organisation:** Nathaniel Lichfield & Partners**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

The standards for quality and quantity of open space in the upcoming Planning Obligations SPD are based on two reports completed pre-recession. A balanced approach to the quality and quantity of provision needs to be taken in order to ensure development viability. Any financial contributions sought in respect of open space should meet the tests set out at paragraph 204 of NPPF.

Officer response:

The Playing Pitch Strategy and Green Space Strategy recommend standards for open space based on detailed audits of needs and condition of spaces, including consultation with interest groups. It is therefore considered that these reports are appropriate evidence bases on which to base standards. Development viability will be considered when requiring planning obligations. Any planning obligations will accord with the NPPF.

DLP433**Full Name:** Ms R Freeman**Organisation:** The Theatres Trust**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

We note that the term 'community facilities' appears throughout the document in policies and in accompanying text, yet there is no explanation of what is meant by this term. We suggest for clarity and so that guidelines are consistent that an entry is made for this term in Appendix 2, the Glossary, and recommend this succinct all-inclusive description which would obviate the need to provide examples: community facilities provide for the health and well-being, social, educational, spiritual, recreational, leisure and cultural needs of the community. Policy N3 seems to deal primarily with open spaces and therefore including community and cultural facilities here is not appropriate. Item 70 of the NPPF seeks to promote the use of shared spaces and safeguard against the loss of community facilities. To reflect item 70 of the NPPF, we suggest that community and cultural facilities are extracted from Policy N3, as they are not provided for within the text of the policy, and a separate policy is introduced to deal with the protection, enhancement and provision of new community and cultural facilities.

Officer response:

A definition of community facilities will be added to the glossary. Reference to community and cultural facilities will be removed from Policy N3. Policy ED1 'Protecting and Enhancing the Borough's Centres' currently protects cultural and community facilities, including those located outside of borough centres. The local spatial strategies seek improvements to existing facilities. It is therefore considered that the Local Plan provides sufficient coverage to reflect the NPPF and a separate policy is not needed.

Section/Policy**Policy N 3****Provision of Open Space, Leisure and Community Facilities****DLP392****Full Name:****Organisation:** West Midlands Metropolitan Authority Pension Fund**Agent Name:** David Staniland**Agent Organisation:** Knight Frank LLP**Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

The Policy advises that an appropriate financial contribution will be required to fund the on-going maintenance of any open spaces provided or improved as part of development over a suitable time period of 10 years. It is considered that our client's outline application for the Marske Inn Farm site would fully accord with Policy N3, as open space, leisure and community facilities are proposed throughout the site. However, our client considers that Policy N3 should be more flexible and allow for opportunities of offsite improvements and upgrades to existing facilities, where appropriate. In doing so, the Council must undertake a qualitative assessment of facilities, rather than quantitatively assessing facilities.

Officer response:

Comments noted. Policy N3 already allows a contribution towards an off-site provision or improvement of open spaces or facilities, where the development would be better served by improvements to existing provision. A qualitative and quantitative assessment of the different sites of open space provision was undertaken to inform the Green Space Strategy and Playing Pitch Strategy.

DLP816**Full Name:** Mr Dave McGuire**Organisation:** Sport England**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Sport England fully supports Policy N3 in principle, but notes that the designation does not seem to extend to playing fields on education sites on the Policies Map. This seems illogical and Sport England wishes to challenge this arbitrary distinction.

Officer response:

The policies map does not show playing fields on education sites as not all are in community use, and where a community use agreement is in place this may be subject to change. The identification of playing pitches on education sites will be kept up to date in the Playing Pitch Strategy. Policy N3 will nevertheless apply to school playing pitches.

DLP644**Full Name:** Mr Ben Stephenson**Organisation:** Persimmon Homes Teesside**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Persimmon Homes have no objections in principle to providing a contribution towards open space where necessary and the inclusion of point d is welcomed as it should, in theory, exclude sites from contributing to the provision of open space where there is an existing surplus in the vicinity. However, 28 of the 33 allocated housing sites require a contribution to open space. In accordance with Policy N3, this contribution should only be sought in areas where there is not a surplus of provision, to avoid unjustifiable contributions which may ultimately affect the viability of sites.

Officer response:

The need for open space and playing pitch provision and improvements are established in the Playing Pitch Strategy and Green Space Strategy which form part of the Local Plan evidence base. The requirement for open space provision in the policies is based on this evidence base. It is not intended that provision or an off-site contribution will be required where it can be demonstrated that there is already sufficient provision to meet current needs, as well as those expected to arise from new development, in terms of access, quantity and quality. This clarification will be added to policy N3.

Paragraph 7.35 - The preservation, restoration, re-creation and recovery of local and national priority species and habitats will also be promoted' how do you plan to achieve this by building on so many greenfield sites?

Officer response:

In preparing the Local Plan, the re-use of previously developed land has been promoted over the use of greenfield sites, however, in order to meet the Borough's identified housing needs, it has been necessary to allocate some greenfield sites within and adjacent to existing settlements. In allocating these sites, impact on biodiversity and protected species was considered, with some sites ruled out for this reason. Furthermore, any development on allocated sites will have to accord with the development plan, including policy N1 which requires developments, where possible, to restore or create special features of the the landscape, with priority given to the creation of habitats to support local biodiversity priorities; policy N2 on green infrastructure, which supports the provision of green infrastructure as part of developments including priority natural habitats and species; and policy N4 which aims to protect and enhance the borough's biodiversity.

DLP181**Full Name:** Mr Jeremy Garside**Organisation:** Tees Valley Wildlife Trust**Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** In Part**Comment summary:**

We support the policy regarding the protection of internationally and nationally designated sites, but there is no policy statement on the protection to be given to Local Sites. The National Planning Policy Framework states that 'Distinctions should be made between the hierarchy of international, national and locally designated sites, so that protection is commensurate with their status and gives appropriate weight to their importance and the contribution that they make to wider ecological networks.' The policy also fails to give any protection to national or local biodiversity priority species or to species protected by law. We support the explanatory text in Paragraph 7.34 on the Natural Network Opportunity Mapping. We support the statement in paragraphs 7.41 and 7.42 on Local Wildlife and Geodiversity Sites, but suggest that reference also be made to the process of selection and designation of Local Sites, the role of the Local Sites Partnership and how this process is consistent across Local Authority boundaries.

Officer response:

Policy N4 covers locally designated sites, explaining that in accordance with the relative importance of the site 'development that is likely to have an adverse impact on...locally designated sites will only be approved where: c. the benefits clearly outweigh any adverse impact on the site; and d. no reasonable alternatives are available.' However, the policy will be updated to give a clearer distinction between the protection of nationally and locally designated sites. The Local Plan states that 'the preservation, restoration, re-creation and recovery of local and national priority species and habitats will also be promoted', however, it is considered that protection of these species within the policy could be strengthened. It is not intended to duplicate in the Local Plan protection already given by other legislation, however, reference to protected species will be added to policy/supporting text. Supporting text will be updated with regard to the process of selection and designation of Local Sites and the role of the Local Sites Partnership in the Tees Valley.

While we support the inclusion of paragraphs 7.41 and 7.42 on Local Wildlife and Geological Sites, we propose that reference also be made to the process of selecting and designating Local Sites. This is an ongoing process so that Local Sites may be selected or even de-selected during the lifetime of the Local Plan. We believe it is also important to record that this system is consistent across administrative boundaries. (Please also note that the term used in Defra guidance is "Local Wildlife and Geological Sites" not "Geodiversity Sites".)

Officer response:

Comments noted. The supporting text will be updated to explain the process of site selection and designation throughout the plan period. Terminology will be updated in accordance with Defra guidance.

Section/Policy**Policy N 4****Biodiversity and Geological Conservation****DLP1238****Full Name:** Neil Douglas**Organisation:** RSPB**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

There are many aspects of this policy which are supported by the RSPB and the positive intentions with regard to the protection and enhancement of the borough's biodiversity assets are noted. However, a number of additions and alterations to policy N4 are recommended. Para 7.33 Recommendations of this section are broadly supported, with recommended changes. The Convention on Biological Diversity definition of biodiversity should be noted and that positive gains in species composition will not always be appropriate to outweigh any loss in diversity within a species - that is, a gain in one or more species may not compensate for diminishment of another. Para. 7.34 We welcome the commitment the Council shows to working closely with the Tees Valley Local Nature Partnership to strengthen planning for biodiversity across local boundaries. Para. 7.35 Support Para. 7.39 Areas of the South Gare and Coatham Sands SSSI that are beyond the boundary of the Teesmouth and Cleveland Coast SPA, are likely to be important to its integrity. Please see recommendations made for Policy N4. An additional SSSI in the borough is Pinkney and Gerrick Woods. Para. 7.40 Object - Plans to protect and enhance SSSIs within the Local Plan must be more ambitious.

Officer response:

i) Policy will be updated to include international priority species and habitats. ii) Reference to compensation with regard to Natura 2000 sites in criterion a, will be removed. iii) An explanation will be added to policy (and HRA) that imperative reasons of public interest should be applied as a last resort. The supporting text will be amended to explain that any sites secured as compensation should be given the same protection as European sites. iv) Policy will be updated with regard to SSSIs in accordance with recommendations. Para. 7.33 Note the Convention on Biological Diversity definition of biodiversity and that positive gains in species composition will not always be appropriate to outweigh any loss in diminishment of another. Para. 7.34 Support noted. Para. 7.35 Reference to internationally protected species will be added. Para. 7.39 Comment noted. List of SSSIs will be updated. Para. 7.40 Protection of SSSIs in policy will be updated in accordance with earlier comments.

DLP719**Full Name:** Lucy Mo**Organisation:** Environment Agency**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

We support the recognition of the socio-economic value of a good quality environment to local communities as highlighted in paragraphs 1.101 and 7.2. However, it is considered that the draft Local Plan does not provide sufficient regard to realising these benefits. We therefore recommend that policies N2 (Green Infrastructure) and N4 (Biodiversity and Geological Conservation) are amended to provide greater emphasis on actions that specifically protect and improve the water environment in local neighbourhoods. With regards to paragraph 7.46, in relation to hedgerows and woodland, we would welcome a specific section that describes the value of neighbourhood watercourses as wildlife corridors, in a similar way that hedgerows and woodland is referenced. We would also welcome actions which ensure the passage and migration of fish and eels.

Officer response:

Policy N4 will be updated in accordance with recommendations. Paragraph on the benefit of neighbourhood watercourses will be included.

DLP645**Full Name:** Mr Ben Stephenson**Organisation:** Persimmon Homes Teesside**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Whilst Persimmon Homes acknowledges their responsibility under Habitats Directive and the Conservation of Habitats and Species Regulations 2010 (as amended) to conduct such appropriate assessments on appropriate sites, the council should ensure that they have a strong, justifiable framework from which to request and then subsequent assess this policy. The framework should create universal guidelines for the Borough that clearly and simply set out the need for such requirements, the scope of the assessments and the benchmarks for what is considered to be an acceptable and unacceptable impact on such a site. Following this, it should also include the acceptable mitigation measures that would remedy such impacts in order to resolve the ambiguity which surrounding such issues. Without a framework development could be delayed and viability could be affected.

Officer response:

The requirement for Appropriate Assessment as stated in the draft Local Plan is based on the findings of the Habitats Regulations Assessment of the Plan. It is not considered appropriate to have universal guidelines for the Borough providing the detail suggested, as impacts and acceptable mitigation could differ on a site by site basis.

DLP471**Full Name:** Ms Sarah Housden**Organisation:** North York Moors National Park**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

The National Park Management Plan identifies strategic habitat connections, including along the north east boundary of the Park and coast and continuing beyond the Park boundary further into Redcar and Cleveland. Although habitat networks are mentioned in the supporting text to Policy N4, the policy could also usefully refer to protecting and enhancing important habitat networks, especially as the NPPF refers to the importance of this. Reference could also be made to the strategic connections identified in the National Park Management Plan alongside the text referring to the opportunity areas identified by the Tees Valley Nature Partnership.

Officer response:

The policy will be updated to make reference to the National Park Management Plan and strategic habitat connections with National Park. Policy N4 already states that wildlife corridors will be protected and enhanced, also add 'and other habitat networks' to the policy.

HISTORIC ENVIRONMENT**DLP779**

Full Name: Mr Alan Hunter
Organisation: English Heritage
Agent Name:
Agent Organisation:
Submission type: Letter
Agree with section?: In Part

Comment summary:

Paragraph 8.3 - arguably the most important partners to engage and involve are the owners of heritage assets. In order to be compliant with the NPPF, the Plan should include a clear and positive strategy for the conservation and enjoyment of the historic environment of an area, including heritage assets most at risk through neglect and decay or other threats (paragraph 126). It may be derived from an understanding of the issues set out in the evidence base and response to those matters. The strategy should also seek positive improvements in the quality of the historic environment in the pursuit of sustainable development (paragraph 9). Rather than taking a process-driven approach, the emphasis should be on the delivery of places of quality, drawing on the opportunities and potential of the historic environment of the local area (paragraph 126). The plan contains welcome overarching principles for conserving the historic environment to be found in chapters 2 and 3. It also contains an extremely thorough and detailed regeneration policy for Kirkleatham, as well as Development Management policies for conservation areas, archaeology, and other heritage assets. It is not, however, readily understood that the Plan contains a positive strategy for the historic environment. Throughout the document there are a number of commitments and intentions which, reading the Plan as a whole, could be said to amount to such a strategy, but for it to be more easily identified as such it would help were they to be brought together as a coherent schedule of actions, perhaps in the Historic Environment chapter. Crucially, absent from the document is a positive strategy for tackling heritage at risk throughout the Borough as required by the NPPF. English Heritage is not yet satisfied that the Plan contains a positive strategy for the historic environment which also addresses the issue of heritage at risk on a borough-wide basis, thereby failing to satisfy paragraph 126 of the NPPF. (See letter for full details of suggested approach and comments).

Officer response:

The introductory text will be updated to set out the Council's strategy for the historic environment. Reference will be made to how the Council intends to address the issue of heritage at risk within the borough.

Suggest number of amendments to the policy to align with the NPPF and similar matters: 1. Insert explanatory text to the policy defining what is included as a 'heritage asset'. Suggest insertion immediately after paragraph 8.2. Comment on the use of 'historic environment'. 2. Amendments could be made to current paragraph 8.3. Suggested insertion 'some of the finest heritage assets'. We suggest the deletion of the word 'significance' from the third line of 8.3 as it adds nothing to 'local, national and international value'. Also suggest replacing 'English Heritage' with 'national agencies' as the future of English Heritage even in the medium term is uncertain. 3. We suggest the insertion of a new paragraph after 8.3 to emphasize the positive approach to the treatment of heritage assets in the development process (as advised in NPPF) [see attached letter for suggested paragraph wording]. 4. English Heritage observed that the NPPF states that heritage asset conservation should be dependent on asset status and significance. To an extent this appears to have taken place but we are of the view that policy HE2 as it currently stands still requires some redrafting to accord with the NPPF [see attached letter for suggested wording]. 5. We suggest a new interpretative paragraph following this policy as follows...[see attached letter for suggested wording].

Officer response:

Amendments will be made to the introductory section, policy and supporting text to take account of proposed amendments.

It is recommended that the wording within the policy and supporting text is amended to ensure consistency with the NPPF. Suggested changes to the wording had been put forward.

Officer response:

Amendments have been made to the wording of the policy and the supporting text to take account of suggested changes.

Section/Policy**Policy HE 3****Archaeological Sites and Monuments****DLP1218****Full Name:****Organisation:** The Gisborough Estate**Agent Name:** Mr Rob Close**Agent Organisation:** Strutt & Parker**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

We consider that as currently drafted, paragraph 24 of this Policy is not in accordance with the NPPF and is unnecessary and onerous. We suggest the following wording to replace paragraph 2 of Policy HE3: Development that may affect a known or possible archaeological site will require the results of a desk top assessment to be submitted as part of the application. Depending on the outcome of the desk top assessment, further archaeological evaluation may also need to be submitted alongside an application. The scope and timing of this evaluation work should be agreed with the Council.

Officer response:

Comment noted. The policy has been amended to require the submission of a desk-based assessment rather than the results of an archaeological evaluation.

DLP651**Full Name:**

Mr Neil Cookson

Organisation:North East
Archaeological
Research Ltd**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

We fully support the inclusion of HE3 as this adds detail about the practical ways in which archaeological sites will be dealt with in the planning process. We have suggested some amendments however so that the policy accords with principles of the NPPF and other policies in the heritage section of the draft plan (which do not say that development will never be permitted). We suggest the following amendments and additions. Paragraph 8.14 provides a figure of 10,000 entries for the HER. This seems high and if not already verified it would be appropriate to do so.

Officer response:

Comments noted. Amendments will be made to the policy and the supporting text accordingly.

DLP692**Full Name:**

Richard Hunt

Organisation:

York Potash Ltd

Agent Name:**Agent Organisation:****Submission type:** Letter**Agree with section?:** In Part**Comment summary:**

Policy HE3 is proscriptive and does not allow for judgement to be exercised although the supporting text does make reference to protecting against 'inappropriate development' - is the development inappropriate because it adversely affects the heritage asset to any degree?

Officer response:

The policy is designed to protect important archaeological sites and monuments, therefore it is important that it is prescriptive enough to do so. However, amendments have been made to the policy to require a desk-based assessment instead of a archaeological evaluation where development may affect a known or possible archaeological site. The reference to inappropriate development in paragraph 8.14 relates to the development being inappropriate as a result of its impact upon important archaeological sites.

Section/Policy**Policy TA 1****Demand Management Measures****DLP1158****Full Name:** Kate Wheeler**Organisation:** Natural England**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** Yes**Comment summary:**

The commitment to promoting sustainable transport as a method for reducing travel in the Borough, in Policyâ€™ TA1: Demand Management Measures is supported by Natural England.

Officer response:

Support noted

DLP69**Full Name:** Mr William James Kelly**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

The policy states that 'currently, the cost of private motoring does not discourage use and there is a need to make public transport a more attractive option' and proposes several items that influence this, all very much 'anti-motorist' and 'anti-car industry'. Workplace parking levies are iniquitous. It is ironic that you propose 'bus lanes' when several other towns and cities are moving to remove their existing systems. And the proposals do not gel with the aspirational nature of your housing and development plans. To get people to move into the area, the lack of congestion, relative ease of travel and parking is a real positive which you seek to remove.

Officer response:

The implementation of demand management measures needs to be balanced with the availability of public transport services, taking account of patronage and the availability of funding. They need to be proportionate to the scale of any problems that need to be addressed and take account of any wider impact on the economy of the borough.

DLP213**Full Name:** Mr S M White**Organisation:** Campaign for the Protection of Rural England (CPRE)**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

9.5 If we are 'tackling climate change' then we need to stop building out of town supermarkets and dormitory estates in East Cleveland, which are only increasing car journeys and thus adding green house gas emissions to the atmosphere 9.8 If the intended housing developments go ahead then inevitably new infrastructure will be required, not maybe. Some existing single carriageways will need to be dualled. 9.9 If long stay car parking is reduced then it will be essential to make a major effort to improve, and make more attractive, accessible, public transport. Services will need to be regular and economically priced.

Officer response:

An appropriate level of development needs to take place in East Cleveland towns to accommodate household formation by existing residents who wish to remain in this area. Small scale highway improvements will be required but no highway dualling is forecast. The availability of car parking needs to be balanced with alternative public transport services, taking account of patronage and the availability of funding.

Section/Policy**Policy TA 1****Demand Management Measures****DLP148****Full Name:** Mr Timothy Argument**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

Although you now seem to accept that Redcar is not the only area with congestion and rightly recognise the A174 bottleneck, you plan to add c,3,000 more cars with additional infrastructure. Instead you pin your hopes on a 'soft' policy of 'demand management'.

Officer response:

The proposed development south of Marske (see Policy H3.1), will not add 3000 cars to the transport network. The impact of additional traffic will be accommodated on the network through mitigation measures.

DLP282**Full Name:** Mr Peter Thompson**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

The Draft Local Plan makes it quite clear that they are trying to discourage motorists and to promote other greener means of transport. Cycling, car share schemes and public transport are all mentioned, but use the same roads as the cars. I can't find any mention of the councils plan with regards to the state of our roads. For too long now the roads in this region have deteriorated and the council seem content on filling potholes, which do not last for more than one winter. Can I suggest the councillors try cycling to work at least once during the winter at dark to see if they think the state of our roads are adequate? There should be some vision for the next fifteen years on how to maintain our roads for all users.

Officer response:

Highway maintenance is outside the scope of the Local Plan. This is covered by the aims of the Council's Local Transport Plan and Transport Asset Management Plan. The Council will continue to endeavour to maintain highways in a safe and serviceable condition within the constraints of available funding.

DLP948**Full Name:** Michael Hoult**Organisation:** Highways Agency**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

The Agency is particularly supportive of the demand management measures outlined within the policy and generally prefers demand management measures to be prioritised over any physical infrastructure improvements. The implementation of the measures through the Local Transport Plan should help to encourage a modal shift to more sustainable transport modes, helping to reduce congestion and stress on the SRN. Whilst it is acknowledged within paragraph 9.8 that the road network is comparatively un-congested, it does state that there are particular hot spots on the SRN at the A19, A174 and A66 at certain times. The Agency agrees that without interventions, congestion in these areas will increase further, but the measures outlined within the policy should provide some mitigating benefit. The main concern of the Agency in relation to this policy is with respect to the link between the policy outcomes (the identified measures) and the spatial aspirations of the plan. It should be confirmed that the relationships between the Local Transport Plan and the spatial provisions of this document are in synergy, something which is not particularly clear given that the LTP was prepared early in 2011.

Officer response:

The strategic aims of the Local Transport Plan 2011-21, as outlined in Paragraph 9.5, are fully aligned with the aims of the draft Local Plan. The use of alternatives to the private car will be promoted for development to improve the sustainability of future transport.

Comment summary:

Almost the whole of Chapter 9 - Transport is predicated on the provision of additional or targeted public transport whereas the adage of 'prevention is better than cure' is applicable and the measures that are available to reduce the need to travel in the first place should take priority. One such measure is the installation of the fastest possible broadband which may remove the need for some of those journeys to take place.

Officer response:

The implementation of broadband services to meet future needs is being encouraged and is supported. It is agreed that this could have the potential to reduce travel demand. This would be beneficial.

Cycling to work/school is not feasible in East Cleveland due to the steep slopes, poor weather conditions and long distances that need to be travelled.

Officer response:

It is accepted that some travel modes will be less appropriate for all in some areas. The overall aim of the transport strategy for the borough is to encourage people to think about alternative modes for appropriate journeys, rather than relying totally on private car use.

Section/Policy**Policy TA 2****Travel Plans**

DLP649**Full Name:** Mr John Wilkinson**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No

Comment summary:

Having read this whole section I believe a number of revisions are required to bring more into line with 2013 detail. i doubt TVU will be placing emphasis on Tees Valley Airport following recent statements for its future. Travel Plans How can East Cleveland residents enjoy the Regeneration in Redcar, Hub, Beacon, Boating Lake, TunedIn let alone the soon to be completed Redcar Leisure and Civic Heart? An explanation regarding transport needs of existing communities throughout the borough specifically for increasing elderly population without cars and the extra pressures if proposed large scale developments take place?

Officer response:

The Draft Local Plan reflects the aims of the Council's long-term transport strategy and the sub-regional Strategic Economic Plan. The Council will continue to work with public transport providers to maintain an adequate network of bus services across the borough. Increased levels of development will increase the potential for additional passengers on services to make them more sustainable.

Section/Policy**Policy TA 3****Improving Accessibility within and beyond the Borough****DLP950**

Full Name: Michael Hoult
Organisation: Highways Agency
Agent Name:
Agent Organisation:
Submission type: E-Mail
Agree with section?: Yes

Comment summary:

The Agency is particularly supportive of the policy and the intentions to work alongside key infrastructure providers such as the Agency and promote cross boundary transport initiatives, to improve accessibility within and beyond the Borough in order to support the Plan's development aspirations and to help facilitate sustainable economic growth. The Agency particularly welcomes the measures proposed which seek to deliver improvements to the Borough's sustainable transport provisions, including the bus and rail services and facilities proposed, along with improvements to pedestrian and cycle links. Such measures, which will improve the viability and desirability of sustainable transport options, should also provide additional benefits in terms of reducing the need to travel by private car. Introducing measures to improve public transport services to rural communities as promoted in Parts f. and g. are also welcomed. The Agency is also supportive of seeking to increase the use of sustainable transport for freight movements, such as by rail and waterborne modes. The improvements proposed to increase the efficiency of freight access and interchanges at Teesport are therefore supported. With regards to Part c. and the proposed improvements to the A66, A1053 and A174, and Part j. and the proposed improvement of the A66 and A174 road links to the A19 and beyond to the A1/A1(M), the Agency welcomes the specific reference to working in partnership with the Highways Agency to deliver improvements on the network. The exact nature of such improvements will be considered further as the development of the Agency's Infrastructure study is progressed.

Comment summary:

In line with Policy TA 3, our client's outline application proposes enhancement works to the Marske railway station, including a park-and-ride car park, as well as improvements to the pedestrian bridge over the railway line, into Marske and a pedestrian footway under the A1085 to ensure safe access for pedestrians. These proposals will help to ensure that access is improved between the site and Marske District Centre.

Officer response:

Support noted. The aims of the Policy will be taken into consideration in assessing the requirements for the proposed development south of Marske (Policy H 3.1).

Section/Policy**Policy TA 3****Improving Accessibility within and beyond the Borough****DLP563****Full Name:** Mr J D Wiggins**Organisation:** Manless Green Farm**Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

I suggest rail service to include reform to Metro and future extension e.g. to Guisborough. Bus services to consider new/re born technology, trolley buses especially in hilly East Cleveland. Such a system is to be installed in Leeds in a few years time.

Officer response:

Improvements to all forms of public transport services will be considered within the constraints of available funding. The reintroduction of trolley buses would constrain the flexibility of bus service routes required in rural East Cleveland.

DLP70**Full Name:** Mr William James Kelly**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

The plan makes reference to an improved rail network and increased frequency of services: Redcar comes to a stop every hour currently, when the trains come through, more frequently during the week when the Potash and Skinningrove steel trains are on the move. Proposing to increase the public train frequency (to half-hourly cf current hourly service) will double the time that the town comes to a standstill. Again, counter-productive and wasteful for all road- and footpath-users. Action needed to improve scheduling and the level crossings. My observations suggest that the trains to Middlesborough are full in the morning rush (up to 1000 hrs.) then run almost empty all day thereafter. The trains to Saltburn then run full from 1700 to 1800 hrs., then trains are almost empty again. Not an attractive option to the train operator.

Officer response:

Passenger rail services on the Saltburn to Darlington line already average half-hourly, though to an irregular timetable. We are working with Tees Valley Unlimited to promote the introduction of an improved timetable and to encourage an improvement to the efficiency of the Redcar level crossings.

DLP34**Full Name:** Mrs M Bielby**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Other**Agree with section?:** No**Comment summary:**

People need a more reliable bus service. The policy also stresses use of trains. This is not helpful to residents East Cleveland and the rural areas where there are no train routes.

Officer response:

We will continue to work with all public transport operators to improve the range and reliability of services across the borough.

Comment summary:

There is a need to examine Local Plan in terms of Tees Valley Unlimited development plans for the Teesside region. a. In particular, under the Transport and Accessibility policy's Freight section, reference should be made to the Department for Transport's "Electric Spine" for rail freight from the North of England to the Midlands, London and Southampton. b. The Local Plan should commit the Authority to support TVU's desire for the electrification of the Tees Valley Line. c. Furthermore, the Local Plan should commit the Authority to support TVU's desire to electrify the railway between Northallerton and Middlesbrough. This would increase Teesside's connectivity with the East Coast Mainline, particularly for rail freight. The local authority should explore what scope there is to regulate bus transport in East Cleveland, to improve timetables, connectivity and interlinkage. Beyond the Plan period, the Local Plan should recognise the potential need for development of an alternative access to the Skinningrove Industrial Plant directly from the A174 Beyond the Plan period, the potential need for the thorough reconstruction of the bridge and highway network serving Skinningrove should be recognised, so as to obviate the need for minor road access to and from the village. The Local Plan should recognise the possibility of adoption of any new bridge on Gaskell Lane, Loftus. There is a need to see that there is a policy co-terminus with the Minerals Local Plan to allow for pipeline development as an environmental improvement for conveyance of minerals and liquids and for reduction of excess HGV traffic.

Officer response:

The Council supports the aims of electrification of the railway lines leading to the Tees Valley. The text has been amended to reflect this. Bus services in East Cleveland are privately operated and bus legislation allows little scope for Council intervention. The Council will continue to work with operators to improve the quality of their services. Provision of an access to Skinningrove Industrial Plant would be unlikely to meet the requirements for congestion reduction to justify public funding. We would work with any businesses to assist with any proposals that they would wish to bring forward. It is unlikely that major reconstruction of access to Skinningrove could be justified, but smaller scale improvements will be considered when opportunities arise. Gaskell Lane is not adopted and the access bridge is privately owned. These would need to be reconstructed to adoptable standards by the owners/residents before they could be adopted by the Council. Pipeline transport will be encouraged wherever possible.

DLP627**Full Name:** Ian Levett**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

On 22/11/12 a Delegated Decision was exercised and duly presented to Cabinet on 08/01/13 which granted a license agreement to Dormanstown Junior Football Club to the premises formerly known as the Army Cadet Force training building. Dormanstown Junior Football Club has worked tirelessly to promote junior football in the area and is looking to secure land for football pitches in the area surrounding their base. As mentioned above 'A condition attached to the planning consent of the new development required the former school site to be re-used for open space to reflect the loss of the existing football pitches in accordance with Sport England guidance.' There is no inclusion of extra football pitches for Dormanstown in the Local Draft Plan For this reason I object to The Draft Local Plan

Officer response:

We have not allocated additional pitches in the Dormanstown area. There is currently an over-provision of senior football pitches in the area which could be used for junior football. However, while no sites have been allocated, the Council would be broadly supportive of a viable scheme on an appropriate site in the Dormanstown area.

Section/Policy**Appendix 4:
Proposed Site Allocations**

Foreword

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
1	Foreword	Amend Text	We have been successful in developing some innovative policies within the plan and I hope that these will help us to address the many challenges face by-facing the borough over the coming years.	For clarity
1	Foreword	Amend Text	The new Local Plan is being prepared at a time of significant change within the planning system. We have positively embraced the new reforms introduced by the Government and have produced a new Local Plan which is strategic in outlook, concise and focused on key issues. I believe that it provides a sound and sustainable basis for the future development of the borough.	For clarity
1	Foreword	Amend Text	Finally, I would like to thank all the individuals, organisations and groups who submitted comments on the policies and proposals throughout the Local Plan preparation process to date. Your comments have helped to shape the plan and made it stronger for that participation. I believe your continued efforts and input as the plan is taken through the statutory process to adoption in 2014 2015 will ensure that this is a plan of which the Council can be proud.	For clarity
1	Foreword	Amend Text	Councillor H McLuckie Portfolio Holder Cabinet Member for Highways, Planning & Transport	For clarity

1 Introduction

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
5	1.1	Delete text	but with it comes new responsibilities that run in tandem with an unprecedented tightening of public spending and an economy emerging from recession and facing significant uncertainties.	For clarity
6	Figure 1 Local Plan – Key documents and influences	Add text to figure	Add Marine and Coastal Access Act 2009 to Legislation Add Marine Policy Statement to National Policy	DLP431, Marine Management Organisation
7	Introduction, Our response, para. 1.10	Replace paragraph 1.10	Whilst a lot of work has been done to make sure these options can be justified, it is important to underline that they are not a final set of proposals. The Council is, therefore, keen to hear the views of all interested parties to help us finalise our Local Plan. The Publication Local Plan is our preferred strategy following previous stages of plan preparation. At this stage, any representations made on the Local Plan will be required to relate to the legal compliance and/or soundness of the document, and they will be submitted to the Government alongside the document for consideration at the Examination in Public.	Update to reflect stage of document.
7	Introduction, Our response, para. 1.10	Amend paragraph	The Council has also prepared an Infrastructure Delivery Plan (IDP) to sit alongside the Draft Publication Local Plan.	Update to reflect stage of document.
7	Introduction, Our response, para. 1.12	Amend paragraph	Following the consideration of the Draft Publication Local Plan by Cabinet in September 2013, July 2014 it will be subject to a six week statutory period of public consultation, commencing in October 2013 August 2014 . During this period, the Council will invite comments representation from all sections of the community. We will publicise the consultation through information in the local press and on our website, and by writing to various consultees. We will hold drop in sessions throughout the borough, with Council officers on hand to explain the contents of the Draft Local Plan and answer any questions that people may have.	Update to reflect stage of document.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
7	Introduction, Our response, para. 1.13	Amend paragraph	Following the consultation, we work will be undertaken to develop a 'Publication Version' Local Plan, along with the more detailed IDP submit the Local Plan to the Government for Examination in Public.	
7	Table 1 Local Plan Timetable	Update table	<p>Approval of Publication Local Plan by Cabinet July 2014</p> <p>Invite representations on Local Plan (Publication Version) April 2014 August 2014 (6-week statutory period)</p> <p>Submission to Secretary of State May 2014 November 2014</p> <p>Examination in Public May – October 2014 November 2014 - May 2015</p> <p>Adoption of Local Plan December 2014 June 2015</p>	Update to reflect stage of document.
8	Introduction, new paragraph following paragraph on Duty to Cooperate	Insert paragraph	<p>Marine Planning</p> <p>Marine planning is a new approach to the management of our seas, introduced through the Marine and Coastal Access Act 2009. Its aim is to ensure a sustainable future for our coastal and offshore waters through managing and balancing the many activities, resources and assets in our marine environment. The Marine Mangement Organisation has responsibility for planning to the mean high water mark, while we as the local planning authority have responsibility to the mean low water mark. We therefore have shared responsibility for the intertidal zone.</p> <p>In preparing the Local Plan we have ensured that our strategy and policies are compliant with the Marine and Coastal Access Act 2009, the Marine Policy Statement and Marine Licensing. We have co-operated, and will continue to liaise, with the Marine Management Organisation to ensure that the Local Plan and its implementation are consistent with the marine planning process.</p>	DLP431, Marine Management Organisation
10	Introduction, Demographic Portrait	Amend text	Since 1981 Redcar and Cleveland has had a fluctuating population, which has settled into a pattern of overall decline generally had a steadily declining population	Updated for clarity

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
10	Introduction, Demographic Portrait, new paragraph	Insert new paragraph after 1.27	The Office of National Statistics 2012 based sub-national population projections, project the population of Redcar and Cleveland to decrease by 0.5% to 134,300 by 2037. The percentage of the population aged over 65, is projected to increase significantly from 20% in 2012 to almost 30% in 2037, the highest percentage in the Tees Valley.	Update to include latest population projections.
13	Paras 1.37 & 1.38	Replace text	<p>The Council's Regeneration Masterplan lays out a long-term 15-year plan for the social, economic and physical development of the borough. It includes proposed changes in size, form, character, image and environment. The Masterplan provides the overarching aspirations of the Council that will guide our growth and the development of our communities, ultimately improving the quality of the borough and our contribution to the region. It includes analysis, recommendations, and proposals for our community's population, economy, housing, transportation, community facilities, and land use. It is based on public input, surveys, planning initiatives, existing development, physical characteristics, and social and economic conditions.</p> <p>The Regeneration Masterplan for Redcar and Cleveland is central to the Council's aspirations and ambitions in terms of local economic growth and the sustainable economic future for both residents and businesses throughout the borough. With the Regeneration Masterplan providing the framework for intervention to secure the economic future of the borough, it is essential that the Local Plan provides the spatial context for the delivery of the Masterplan.</p> <p>...It guides our growth and outlines projects that can stimulate the local economy to create jobs and business growth.</p> <p>We recognised that keeping things as they were was not an option, and if the economy was to thrive and prosper we had to be open to new ideas and opportunities. We are, therefore, committed to putting in place a long-term framework for regeneration, as this will result in sustainable regeneration of the borough.</p>	For clarity

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
13	Introduction, Redcar and Cleveland Housing Strategy, para. 1.42	Delete text	The Redcar and Cleveland Housing Partnership has been fully engaged in the development of the Draft Local Plan and is supportive of its strategic approach. As such, the draft plan is fully consistent with the housing strategy and will contribute significantly to the improvement of housing conditions in the borough.	Update to reflect stage of document.
14	After para 1.44	Add text	<p>The signing of the Tees Valley City Deal will give the area more control over its economic destiny. The City Deal builds upon Tees Valley's strengths in the processing, energy and materials sectors, and emerging industries, by providing an attractive environment for investment in such sectors, whilst increasing the integration and efficiency of the existing company base.</p> <p>In 2014 TVU presented its proposals for growth through to 2025 through the production of its Strategic Economic Plan (SEP). The overarching aim of the SEP is to work collaboratively to build on competitive advantages, remove barriers to growth and facilitate the creation of 25,000 new jobs and £1billion extra into the economy over the next decade.</p>	For clarity
15	Introduction, Vision for Redcar and Cleveland	Amend text	The historic environment and its designated and undesignated heritage assets, particularly those at risk, buildings and structures of cultural and historic importance in the borough will be safeguarded and improved for future generations.	DLP758 English Heritage
15	Introduction, Vision for Redcar and Cleveland	Insert text	We will manage travel demand, reduce congestion by encouraging a modal shift towards sustainable modes of transport and ensure that the transport network operates efficiently and is capable of supporting the Plan's growth aspirations.	DLP517 Home Builders Federation Ltd.
16	Introduction, Vision for	Insert text	The wider rural economy will have grown and strengthened, including food	DLP125 National

40	Policy SD2	Amend text	<p>Delete text: An Appropriate Assessment will be required for all development that is likely to have a significant effect on a Natura 2000 site.</p> <p>Add text: An Appropriate Assessment will be required for all development that, either alone, or in combination with other plans or developments, is likely to have an adverse effect on a Natura 2000 site.</p>	DLP1126. To ensure compliance with the Habitats and Species Regulations 2010 (as amended).
40	Pargraph 2.14	Amend text	<p>Amend text: Under the Habitats and Species Regulations 2010 (as amended), an Appropriate Assessment will be required for all development that is likely to have a significant effect on all Natura 2000 sites, either alone or in combination with other schemes. any proposals located within 5km of a Natura 2000 site will be required to carry out a screening exercise to determine the need for an Appropriate Assessment.</p>	DLP1134. Add requirement for HRA screening.

Policy SD3 Development Limits

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
42	Policy SD3 (k)	Add text	Add text: redevelopment of previously developed land, provided that the site is not of high environmental value.	DLP1227. To protect sites of high environmental value.
42	Paragraph 2.19	Amend text	The redevelopment of such land will normally be acceptable providing it was developed with an established use prior to the plan period and that the site is not of high environmental quality. and subject to the other policies in the Local Plan	DLP1227. To protect sites of high environmental value.
N/A	Policies Map	Amend development limits	N/A	DLP 569 and 570. Correction
42	Policy SD3 (i)	Amend text	Amend text: development required to ensure the preservation and conservation and, where appropriate, enhancement of assets of historical significance;	DLP760. To improve clarity

Policy SD4 General Development Principles

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
44	Policy SD4 (j)	Add text	Add text: Be built to the appropriate level of the national sustainable building standards applicable at the time, although the Council will encourage developments to exceed such requirements where possible;	DLP520. To encourage higher levels of energy efficiency.
44	Policy SD4 (k)	Amend text	<p>Delete text: incorporate sustainable design and construction techniques or renewable energy to meet high standards for energy efficiency to reduce greenhouse gas emissions and improve water efficiency. The Council will require major developments to reduce their predicted energy requirement by a minimum of 10%;</p> <p>Add text: help achieve the Government’s commitment to reducing greenhouse gas emissions</p>	Forthcoming changes to the Building Regulations.
44	Policy SD4 (i)	Delete text	Delete text: be designed to mitigate and adapt to climate change; taking account of flood risk, coastal change and water supply and demand considerations;	DLP1352. New policy on water management and flood risk.
44	Policy SD4 (k)	Delete text	Delete text: manage surface water close to its source and on the surface where reasonably practical to do so;	DLP1352. New policy on water management and flood risk.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
44	Policy SD4 (q)	Add text	Add and delete text: respect or enhance the landscape, biodiversity, geological features, the historic environment and both designated and non-designated heritage designations or assets that contribute positively to the site and the surrounding area;	Improve clarity.
45	Policy SD4 (r)	Delete text	Delete text: incorporate infrastructure and services to serve the development; including recycling and waste facilities, and Sustainable Drainage Systems (if appropriate);	DLP1352. New policy on water management and flood risk.
45	Policy SD4 (u)	Delete text	Delete text: a Design and Access Statement will be required for all major developments. The level of detail will be dependent on the scale and nature of the development. The Design and Access Statement will be required to include a Carbon Reduction Plan setting out how the development will achieve the required 10% reduction in energy consumption. Should specific site constraints prevent a reduction in energy demand or the provision of renewable energy from being achieved on site, then a contribution to a carbon management fund will be required to be invested in off-site renewable energy efficiency projects within the borough; and	DLP1352. Forthcoming changes to the Building Regulations.
47	Policy SD4 - Sub title	Delete text	Delete text: Energy efficiency, flood risk and climate change	DLP1352. New policy on water management and flood risk.
46	Paragraph 2.27	Add text	Applicants for major developments will be required to submit a Design and Access Statement to demonstrate how good design has been taken into account in drawing up the development proposal, including adaptation to climate change, reducing carbon emissions and water consumption and	For clarity

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			setting out how waste will be managed.	
47	Paragraph 2.29	Amend text	Add and delete text: Nationally described sustainable construction standards have been developed for new homes including the Building Regulations 2000 (as amended), the Code for Sustainable Homes, and for new non-residential buildings, the Building Research Establishment's Environmental Assessment Method. Although these tools may change over the plan period, as a guiding principle the Council will adopt, as a minimum, the Government's standard efficiency nationally described standards prevalent at the time although will encourage developments to exceed such requirements where possible.	In
47	Paragraph 2.30	Delete and add text	<p>Add and delete text: Improving the energy efficiency of buildings can play an important role in reducing levels of carbon emission. All new development should help to achieve the Government and the Council's commitment to reducing CO₂ emissions greenhouse gas emissions which require all new homes built from 2016 and all new non-domestic buildings from 2019 to meet the zero carbon standard.</p> <p>The government is committed to requiring all new homes from 2016 to meet the zero carbon standard. The government proposes that house builders can achieve the zero carbon standard by mitigating the remaining emissions 'off-site', in effect a kind of carbon offsetting or abatement. Allowable Solutions is the overarching term for the carbon offsetting process and the various measures which house builders may use to achieve the zero carbon standard from 2016. In particular, designs should incorporate energy efficiency measures and consider the use of renewable energy generation. A hierarchical approach should be taken to reducing carbon emissions by a minimum of 10% through the following approach:</p> <ul style="list-style-type: none"> ● minimises the energy demand of new buildings; ● utilises energy efficient supply through low carbon technologies; and 	Forthcoming changes to the Building Regulations.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>• supplies energy from renewable energy sources.</p>	
47	Paragraph 2.32 – 2.36	Delete text	<p>Delete text: As well as mitigating our impact upon climate change, it is important that the known impacts of future climate change are also considered and designs adapted accordingly. Rises in sea level and increased rainfall, as a result of changes to our climate, are potentially a cause of more frequent flooding events. New development should therefore avoid those areas which are most vulnerable to flooding where possible. The Environment Agency has established a three tier flood zone hierarchy, with Flood Zone 3 being the most susceptible to flooding. Development will not be allowed in higher risk flood zones, unless there are outweighing social economic and/or regeneration benefits and in such cases appropriate design solutions should be adopted to minimise the impact of flooding.</p> <p>New development can contribute to flooding by reducing the amount of permeable land and increasing the level of surface water run-off into drainage systems and water courses. Measures to reduce this impact, such as the use of Sustainable Urban Drainage Systems (SuDS) or alternative water retention or recycling schemes will be encouraged where appropriate.</p> <p>The Council will request that a site specific Flood Risk Assessment (FRA) be carried out, in accordance with the NPPF, to demonstrate that development is not at risk from flooding and that it does not increase flood risk elsewhere. The rivers, watercourses, sewers and ground conditions throughout Redcar and Cleveland have varying amounts of capacity for flow from new developments and an adequate assessment of this capacity must be undertaken to support any development proposals. Developers should refer to the Redcar and Cleveland Strategic Flood Risk Assessment and Surface Water Management Plans for guidance on flood risk and surface water management. The appropriate responsible bodies including the Environment Agency, Northumbrian Water Ltd and Redcar & Cleveland Borough Council should be consulted, as appropriate, during the initial design process for any new development or redevelopment.</p>	DLP1352. New policy on water management and flood risk.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>The appropriate application of sustainable drainage systems to manage surface water within a development is the approach recommended within the technical guidance to the National Planning Policy Framework (NPPF) as a way of managing this risk. Current best practice guidance, such as the 'SUDS Manual' and 'Planning for SUDS' (CIRIA C697 and C687), should be followed in the design of developments.</p> <p>The EU Water Framework Directive and the River Basin Management Plan requires public bodies to have a positive impact on the quality of water courses and groundwater. Developers should ensure that surface water that is discharged to ground or into rivers and sewers has an appropriate level of treatment to reduce the risk of diffuse pollution. The run-off from all hard surfaces should receive an appropriate level of treatment in accordance with Sustainable Drainage Systems guidelines, 'SUDS Manual' (CIRIA C697).</p>	

Policy SD 5 Developer Contributions

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
49	Policy SD5	Amend text	Amend text: The Council will follow detailed guidance set out in the Planning Obligations Developer Contributions SPD. The Planning Obligations Developer Contributions SPD will be prepared in 2014 in order to determine the levels of contributions and procedures to secure them.	Document name change.
49	Policy SD5 (j)	Add text	Add text: open space, sport and recreation	DLP812. To secure contributions for sport.
49	Policy SD5 (l)	Add text	Add text: improvements to landscape, water environments , biodiversity and heritage assets including habitat creation and repair or restoration of historic buildings and structures;	DLP717. To secure contributions to improve water environments.
50	Paragraph 2.37	Add text	Add text: Planning obligations will only be sought where they meet the legal tests set out in Regulation 122 of the Community Infrastructure Levy Regulations 2010 as amended and the policy tests set out in paragraph 204 of the National Planning Policy Framework.	DLP1274. To meet requirements of NPPF and CIL Regulations.
50	Paragraph 2.41	Amend text	Amend text: The Planning Obligations Developer Contributions SPD will set out detailed guidance on the Council's approach to securing planning contributions.	Document name change.

Policy SD6 Renewable Energy

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
51	Policy SD6	Delete text	Renewable energy schemes will be supported and encouraged to help meet the Government's climate change objectives and targets for electricity generation from renewable sources. Proposals and will be accepted approved where their impact is, or can be made, acceptable.	DLP302 Banks Renewables
51	Policy SD6	Amend text	...are located within our suitable urban industrial areas.	DLP1229 RSPB
51	Policy SD6	Amend text	We will strongly support schemes where they are located within our suitable urban industrial areas. In the rural areas, renewable energy proposals should be located within designated Restoration Landscape Areas. Renewable energy developments will not only be allowed within, or where they impact upon, nationally protected landscape areas or Sensitive Landscape Areas unless where they meet the exceptions criteria set out in Policy N1	DLP302 Banks Renewables
51	Policy SD6	Amend text	Particular importance will be placed on minimising the impact of renewable energy developments on the setting of the North York Moors National Park.	DLP302 Banks Renewables
51	Policy SD6	Add text	We will support the development of district heating, including new and retrofit schemes.	DLP698 Environment Agency
51	Policy SD6	Amend policy wording	b) environmental impacts, including on designated sites Add at end of policy ' Renewable energy developments will not be allowed within, or where they are likely to have an adverse effect, alone, or in combination with other plans or projects, on designated ecological sites or on priority species, unless they meet the exceptions criteria set out in Policy N4. '	DLP1229 RSPB DLP1137 Natural England DLP310 Tees Valley Nature Partnership

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
				DLP714 Tees Valley Wildlife Trust
51	Policy SD6	Add text	Development proposals for the generation of renewable energy will not be granted if there would be any adverse impacts on airport radar, unless mitigation is possible and a scheme for its provision is agreed with the airport affected.	DLP744 Durham Tees Valley Airport
52	Policy SD6, supporting text	Add new paragraph	The ecological sensitivity of a proposed location is also important. It should be ensured that all proposals, whether in rural or urban areas, do not have an adverse environmental impact and that proposals meet the criteria set out in Policy N4 regarding any impact on biodiversity and geodiversity, including on designated sites and priority species. It should also be ensured that development does not impact upon species protected by legislation.	DLP1229 RSPB DLP1137 Natural England DLP310 Tees Valley Nature Partnership DLP714 Tees Valley Wildlife Trust
52	Policy SD6, supporting text	Add new paragraph	It is important that development does not impact upon the safe operation of airports, including Durham Tees Valley. Any wind turbine development falling within the 30 kilometre safeguarding zone, as identified on the Proposals Map, which would affect the operational integrity or safety of Durham Tees Valley Airport will not be permitted unless acceptable mitigation is agreed. The cumulative impacts of proposals on the operation of the airport will also be considered.	DLP302 Banks Renewables
52	Policy SD6, supporting text, para. 2.47	Delete text	Sensitivity could be visual or ecological.	DLP1229 RSPB

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
52	Policy SD6, supporting text	Add text	The Tees Valley Wind Energy Capacity Study (2004) identified a number of potential 'wind resource areas' including at South Bank and parts of East Cleveland which represent clusters of potentially deliverable sites of least constraint. Any proposals in these areas should also accord with Policy SD6.	DLP302 Banks Renewables
53	Policy SD6, supporting text, paras. 2.49 and 2.50, and Options SD6a and SD6b	Delete text	<p>Other options considered included having a policy with blanket separation distance between wind turbines and residential properties. However, this option was rejected as suitable separation distances would be dependent on local context, such as surrounding topography, and would also be contrary to recently released planning practice guidance for renewable and low carbon energy.</p> <p>It was also considered whether to identify within the policy locations where certain types of renewable energy would be acceptable in order to help secure the delivery of these projects. However, it is considered that there is currently insufficient evidence to identify specific sites and so instead broad types of areas where renewable energy projects are likely to be supported are identified in the supporting text.</p> <p>Other options considered included having a policy with blanket separation distance between wind turbines and residential properties. However, this option was rejected as suitable separation distances would be dependent on local context, such as surrounding topography, and would also be contrary to recently released planning practice guidance for renewable and low carbon energy.</p> <p>It was also considered whether to identify within the policy locations where certain types of renewable energy would be acceptable in order to help secure the delivery of these projects. New Policy SD7 Flood and Water Management

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
54	Sustainability and Design section	New policy	<p>Flood and Water Management</p> <p>Flood risk will be taken into account at all stages in the planning process to avoid inappropriate development in areas at current or future risk. Development in areas at risk of flooding, as identified by the Environment Agency flood risk maps, will only be granted where all of the following criteria are met:</p> <ul style="list-style-type: none"> a. the proposal meets the sequential and exception tests (where required) in relation to the National Planning Policy Framework; b. a site specific flood risk assessment demonstrates that the development will be safe, including the access and egress, without increasing flood risk elsewhere, and, where possible, will reduce flood risk overall; and c. new site drainage systems are designed taking account of events that exceed the normal design standard (e.g. consideration of flood flow routing and utilising temporary storage areas). <p>All development proposals will be expected to be designed to mitigate and adapt to climate change, taking account of flood risk by:</p> <ul style="list-style-type: none"> d. ensuring opportunities to contribute to the mitigation of flooding elsewhere are taken; e. prioritising the use of sustainable drainage systems; f. ensuring the full separation of foul and surface water flows; and g. ensuring development is in accordance with the Redcar and Cleveland Strategic Flood Risk Assessment. <p>A site specific flood risk assessment will be required to be carried out, to demonstrate that development is not at risk from flooding and that it</p>	DLP1352. New policy on water management and flood risk.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>does not increase flood risk elsewhere, in the following circumstances:</p> <ul style="list-style-type: none"> h. proposals of 1 hectare or greater in Flood Zone 1; i. proposals for new development (including minor development and change of use) in Flood Zones 2 and 3. Zones 2 and 3 are shown on the flood map with Flood Zone 1 being all the land falling outside Zones 2 and 3. These flood zones refer to the probability of sea and river flooding only, ignoring the presence of existing defences; j. proposals for new development in areas susceptible to surface water flooding; and k. where the proposed development may be subject to other sources of flooding. <p>Surface water runoff not collected for use must be discharged to one or more of the following, listed in order of priority:</p> <ul style="list-style-type: none"> l. discharge into the ground (infiltration); or where not reasonably practicable, m. discharge to a surface water body; or where not reasonably practicable, n. discharge to a surface water sewer, highway drain, or another drainage system; or where not reasonably practicable o. discharge to a combined sewer. <p>For Greenfield sites, the peak runoff rate from the development to any highway drain, sewer or surface water body for the 1 in 1 year rainfall event and the 1 in 100 year rainfall event must not exceed the peak Greenfield runoff rate from the site same event.</p> <p>For previously developed sites, the peak runoff rate from the development to any drain, sewer or surface water body for the 1 in 1 year</p>	

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>rainfall event and the 1 in 100 year rainfall event must be as close as reasonably practicable to the Greenfield runoff rate from the site for the same rainfall event, but must not exceed the rate of discharge for the pre-development scenario for that event. Discharge rates into surface water and combined sewers resulting from the redevelopment of brownfield sites will be limited to a maximum of 50% of flows consented for previous uses.</p> <p>Major developments will be required to submit a drainage plan to show that the site drainage can be adequately dealt with. The drainage plan will need to be submitted to the SuDS Approving Body for approval. For the purpose of this policy, major development includes residential developments comprising 10 or more dwellings and other developments with a floor space of 1,000m² or more.</p> <p>The drainage system must be designed and constructed so surface water discharged does not adversely impact the water quality of receiving water bodies, both during construction and when operational. New development should seek to improve water quality where possible as well maintaining and enhancing the biodiversity and habitat of watercourses.</p> <p><u>Supporting Text</u></p> <p>The National Planning Policy Framework (NPPF) sets out the Government’s intention that planning should proactively help the mitigation of, and adaption to, climate change including the management of water and flood risk. It is important that inappropriate development is avoided in areas currently at risk from flooding, or likely to be at risk as a result of climate change, or in areas where development is likely to increase flooding elsewhere. Any risk must be assessed by using the Environment Agency Flood maps To access the flood maps, see the Environment Agency’s website at: http://maps.environment-agency.gov.uk/wiyby/wiybyController?ep=maptopics&lang=e and the</p>	

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>Council's Strategic Flood Risk Assessment (SFRA). The latter was originally published in 2010 and some of the data has been superseded by mapping from the Environment Agency, which should also be taken into account.</p> <p>Built development can lead to increased surface water run-off; therefore new development is encouraged to incorporate mitigation techniques in its design, such as permeable surfaces and Sustainable Drainage Systems (SuDS). For all sites, the aim is to provide a fail-safe system that mitigates any negative impact on downstream flood risk resulting from peak rates of runoff from the proposed development.</p> <p>The Flood and Water Management Act 2010 requires new developments and redevelopments to have drainage plans for surface runoff approved by the SuDS Approving Body (SAB) where the construction work would have drainage implications. The Department for Environment, Food and Rural Affairs (Defra) has developed National Standards in order to manage surface runoff in accordance with Schedule 3 the Act. The National Standards National Standards for sustainable drainage systems - designing, constructing, operating and maintaining drainage for surface runoff (Defra, 2011). set out what to design and construct in order to obtain approval from the (SAB) and for operating and maintaining SuDS which the SAB adopts. The Council is also in the process of developing guidance on the local use of SuDS. These national and local standards should be taken into account in the design of drainage systems. The Sustainable Drainage (Approval and Adoption) (England) Order 2012 defines the exemptions to the requirement for approval.</p> <p>All development proposals must take account of surface water management plans, catchment flood management plans and related flood defence plans and strategies.</p> <p>The Council has a duty to have regard to the Northumbrian River Basin Management Plan to ensure the protection and improvement in quality of</p>	

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>the water environment. This is also in accordance with the overall objective of the Water Framework Directive to achieve “good ecological status” in all water-bodies (including surface, ground and coastal waters) and not allow any deterioration from their current status.</p> <p>Wherever possible, measures to deal with flood risk and drainage should identify opportunities to maintain and enhance the biodiversity and habitat of watercourses through protecting or restoring natural channel morphology. Actions should also be taken to remove modifications to restore a more natural watercourse and associated biodiversity. Where such removal is not possible or not in the public interest, mitigation measures must be taken to create a more natural watercourse, improve habitats and enhance biodiversity.</p>	

Policy LS1 Greater Eston Spatial Strategy

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
56	LS 1 (h)	Amend text	Amend text: improve the quality and quantity of general employment land, including extending Skippers Lane Industrial Estate providing new employment land at Mannion Park, Grangetown;	To reflect changes to Policy ED 7
57	Policy LS1 (v)	Add word	Add word: safeguard and enhance buildings, sites, settings and areas of heritage and cultural importance;	DLP825. To recognise the potential contribution made by the setting to heritage assets.

Policy LS2 Redcar Spatial Strategy

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
58	Policy LS2 (Economy section)	Add text	Add text: Support the investigation into the feasibility of developing a new pier in Redcar.	Various comments. Further evidence available.
58	LS 2 (b)	Delete text	Delete text: as part of a consolidated Redcar Town Centre.	Consistency
58	LS 2 (e)	Amend text	Amend text: support the provision of a the 'Sustainable Redcar House' project as part of a consolidated Redcar Town Centre;	For clarity
58	LS2 (l)	Delete text	Delete text: , including through the implementation of the Coatham Masterplan	For clarification - the Council is no longer preparing a masterplan for Coatham
58	Policy LS2 (aa)	Amend text	Delete text: protect and enhance historical assets at Kirkleatham Village Add text: Safeguard and enhance all buildings, sites and areas of heritage and cultural importance.	DLP762. To improve clarity.
60	Paragraph 3.9	Amend text	Amend text: These include Redcar and Cleveland College and other education facilities, health and care facilities, public transport, parks and community and leisure facilities . These will soon be supplemented by the Redcar Leisure and Community Heart, which will house the new Council Chamber and Register Office alongside leisure facilities and business accommodation.	Completion of Redcar Leisure and Community Heart.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
60	Paragraph 3.11	Add text	Add text: A sustainable Redcar House will be an energy efficient, distinctive and innovative style of housing that will be delivered on infill sites along the seafront and in the town centre.	DLP97. To improve clarity.

Policy LS3 Rural Communities Spatial Strategy

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
61	Policy LS3 (a)	Amend text	Add text: enhance the role of Guisborough as the principal rural service centre and promote independent businesses including the retail, leisure and tourism sectors as well as a focus for new housing.	DLP 1276. To recognise Guisborough as a focus for new housing development, consistent with the spatial strategy.
62	Policy LS3 (p)	Add word	Add word: safeguard and enhance buildings, sites, settings and areas of heritage and cultural importance	DLP 824. To improve clarity
62	Policy LS3 (s)	Add text	Add text: promote and enhance Local Nature Reserves , Local Sites and support any future opportunities to improve biodiversity and geodiversity in the East Cleveland landscape opportunity area;	DLP 311. To make policy consistent with Policy N4.
62	Policy LS3 (t)	Add text	Add text: provide a network of green infrastructure routes into and between the North York Moors National Park and North Yorkshire and Cleveland Heritage Coast and between Guisborough and Nunthorpe; and	DLP 311. To recognise the additional green infrastructure route.

Policy LS4 South Tees Spatial Strategy

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
65	Policy LS4 (w)	Amend text	Amend and add text: safeguard and enhance buildings, sites, settings and areas of heritage and cultural importance including the 'Dorman Long' tower at South Bank Coke Ovens and support, supporting its adaptation to enable alternative uses;	DLP764. To include protection of all heritage assets.
64	Policy LS4 (Economy section)	Add text	Add text: create a new energy hub to support the offshore wind and sub-sea engineering sectors;	DLP1187. Provide support for new 'energy hub'.
65	Policy LS4 (Environment section)	Add text	Add text: Support the development of the South Tees District Heating System.	DLP1187. Provide support for District Heating.
65	Policy LS4 (Environment section)	Add text	Add text: support the development Carbon Capture and Storage to decarbonise the local economy.	DLP1187. Provide support for CCS.
65	Paragraph 3.23	Add text	Add text: The area has further potential to contribute to the national economy, particularly through the expansion of process and advanced engineering manufacturing sectors and the close proximity to the North Sea and offshore projects provides the opportunity to create a new energy hub, supporting the offshore wind and sub-sea engineering sectors.	DLP1187. Provide support for additional sectors.

Policy REG1 Coatham

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
68	Policy REG1	Amend text	<p>Add/Delete: Land at Coatham (8.7 ha) is allocated for a mixed use development comprising of leisure, tourism and visitor uses.</p> <p>A masterplan will be prepared by the Council to set out the specific development opportunities and proposed uses for each site. Any planning applications will be expected to accord with the overarching objectives of this masterplan.</p> <p>It is expected that the proposals will achieve the following:</p> <ul style="list-style-type: none"> a. A high quality mixed use development comprising of a range of leisure and tourism uses, including appropriate ancillary uses; b. Ground investigation and prior completion of any necessary remediation work; c. Contributions, as necessary at the time of application, towards any other services and community infrastructure enhancements; and d. Where development is proposed in flood zones 2 and 3, proposals should meet the sequential and exceptions tests and be supported by a Flood Risk Assessment. <p>Due to the close proximity of the site to the Teesmouth and Cleveland Coast Special Protection Area and Ramsar site, an Appropriate Assessment should be undertaken to ensure that there would be no adverse impacts upon the SPA as a result of the proposed development.</p>	To provide greater detail on the development anticipated on site, now that a masterplan is no longer being prepared.
68	Paragraph 4.4	Amend text	<p>Delete: Development in this location will support the regeneration of Coatham, and complement the wider transformation of Redcar that includes the redeveloped seafront and the new Redcar Leisure and Community Heart. It</p>	For clarity and to demonstrate consistency of the

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>will aim to deliver a diverse range of activities and attractions that do not currently exist in Redcar, and support the leisure, tourism and visitor economies. The ultimate aim is to broaden the range of facilities available to the whole community, whilst diversifying and supporting growth in the local economy.</p> <p>Add: The Council continues to promote the site for leisure and tourism development as it will support the regeneration of Coatham, and complement the wider transformation of Redcar that includes the redeveloped seafront and the new Redcar & Cleveland Leisure and Community Heart. It will aim to deliver a diverse range of activities and attractions that do not currently exist in Redcar, support the leisure, tourism and visitor economies and assist in the delivery of the Regeneration Masterplan. The ultimate aim is to broaden the range of facilities available to the whole community, whilst diversifying and supporting growth in the local economy.</p>	policy with the delivery of the Regeneration Masterplan.
68	Paragraphs 4.5 – 4.7	Delete text	<p>Delete: It is expected that the delivery of the Coatham Masterplan will create over 20 new businesses and 200 new jobs, and help attract over 100,000 additional visitors per year.</p> <p>The Coatham Masterplan is still being developed, and will be subject to separate public consultation before it is adopted by the Council.</p> <p>As part of any development, a Habitats Regulations Assessment should be undertaken to ensure that there will be no adverse impacts on the Teesmouth and Cleveland Special Protection Area.</p>	For clarity – to reflect that a masterplan is no longer being prepared for the site and to provide greater clarity for the need for an appropriate assessment under the Habitats Regulations.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
68	After Paragraph 4.4	Add new paragraphs	<p>Add: Whilst the site is allocated specifically for leisure, tourism and visitor uses, some other ancillary uses will be supported where they would improve the leisure and tourism offer of the site. Such complimentary uses would include restaurants and cafes, which could be used as part of a linked trip and increase the length of stay. Whilst other main town centre uses (other than leisure and tourism use) may be supported on the site, they will still be expected to follow the sequential assessment approach set out in Policy ED1 and be supported by an Impact Assessment, where necessary.</p> <p>Parts of the site are located in flood zones 2 and 3. Development should try to avoid the parts of the site which are most prone to flooding. However, where development is proposed on land within flood zones 2 and 3, development proposals should meet the sequential and exceptions tests, where required, and a flood risk assessment should demonstrate that the development will be safe, including access and egress, without increasing flood risk elsewhere.</p> <p>As the site comprises of predominantly previously developed land, there is the potential for there to be some level of contamination. The applicant will therefore be required to undertake a ground survey and any necessary mitigation measures.</p> <p>The site is located in close proximity to the Teesmouth and Cleveland Coast Special Protection Area and Ramsar site. An Appropriate Assessment under the Habitats Regulations should therefore be undertaken as part of any development, to ensure that there will be no adverse impacts upon the SPA.</p>	To provide greater detail on the development anticipated on site, now that a masterplan is no longer being prepared.

Policy REG2 Kirkleatham

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
69	REG2	Amend policy wording	Kirkleatham Hall, Stables and Garden Estate will continue to be recognised as a major heritage asset in Redcar and Cleveland and the North East region, and all stakeholders will work together to reduce risk and maximise significance by following a conservation-led approach to their rescue, re-use and future management, based on a sound understanding of their significance. The preparation of Investigating a strategic masterplan for the historic estate will could ensure that the heritage assets of the estate act as a catalyst in enabling our young to establish an attraction of regional significance with a range of employment and training opportunities, to allow people to move into work, education or training. by using the restored buildings to teach heritage skills and crafts.	For clarity

86	Policy ED 4	Amend text	Delete: (as identified in Policy ED7) Add: (as identified in Policy ED6)	Correction of policy number
85	Paragraph 5.22	Delete text	In such circumstances, the main industrial function would not be appropriate within a centre and ancillary retail would be appropriate within an industrial estate or business parks.	For clarity

Policy ED6 Protecting Employment Areas

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
88	Policy ED 6 (c)	Add text	Add: Teesport and land along the River Tees – Port related activities and logistics sector.	DLP 681: For consistency with Policy LS4.
89	Paragraph 5.26	Amend text	Delete: ...with a further 78ha of employment land safeguarded for general employment use. Add: ...with a further 82ha of employment land safeguarded for general employment use.	To reflect change to proposed employment allocation under Policy ED7.
89	Paragraph 5.26	Amend text	Delete: Up to 64ha of general industrial land is safeguarded under Policy ED7, with the remainder being brought forward through a new employment allocation at Skippers Lane Industrial Estate under Policy ED8 and a mixed use allocation at Skelton under Policy REG3. Add: Up to 64ha of general industrial land is safeguarded under Policy ED6, with the remainder being brought forward through a new employment allocation at Mannion Park under Policy ED7 and a mixed use regeneration allocation at Skelton under Policy REG3.	Policy numbers updated for consistency and proposed employment allocation amended for consistency with Policy ED7.
91	Paragraph 5.36	Add text	Add: The new Palace Hub in Redcar provides a purpose built focus for creative industries and the presence of other creative industries in Saltburn is also notable.	DLP 438: To include reference to creative industries in Saltburn.

Policy ED7 New Employment Allocations

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
92	Policy ED 7	Amend text	Delete: Land adjacent to Skippers Lane Industrial Estate (7ha) will be brought forward for general industrial and business development (B1, B2 and B8 uses). Add: Land at Mannion Park (11ha) will be brought forward for general industrial and business development (B1, B2 and B8 uses).	To reflect change in employment allocation, following concerns over deliverability of original allocation.
92	After Policy ED 7 (a)	Add text	Add: b. the retention of an adequate buffer along the western boundary to protect the residential amenities of nearby occupants.	To reflect change in employment allocation.
92	Policy ED 7 (c)	Add text	Add: c. an appropriate landscaping scheme throughout the site, including a deep landscaping buffer adjacent to A1053 Greystone Road;	To provide a high quality development.
92	After Policy ED 7 (c)	Add text	Add: e. a detailed ecological survey to identify the biodiversity value of the site and implementation of any mitigation measures identified;	To reflect presence of some mature trees and hedgerows on the site.
92	Policy ED 7 (e)	Delete text	Delete: e. re-provision of allotments, as necessary.	To reflect change in employment allocation.
92	Paragraph 5.39	Amend text	Delete: In order to address the supply of employment land within the South Tees Area to meet this identified need, it is proposed to allocate a new area for general industrial use adjacent to Skippers Lane Industrial Estate. The site is currently occupied by a disused scrapyard, statutory allotments and playing	To reflect change in employment allocation.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>pitches.</p> <p>Add: In order to address the supply of employment land within the South Tees Area to meet this identified need, it is proposed to allocate a new area for general industrial use at Mannion Park. Whilst it is noted that the site is larger than the 6.95 hectares required, it is anticipated that the net developable area would be significantly lower than the 11ha allocated, due to the site specific requirements set out within the policy.</p>	
92	Paragraphs 5.40-5.42	Delete text	<p>Delete: In order to bring the site forward for development, the Council must obtain consent from Secretary of State in order to dispose of the statutory allotments. The Council is satisfied that the allotment gardens are no longer required and that suitable provision can be provided elsewhere within the locality to meet identified needs.</p> <p>The Redcar & Cleveland Playing Pitch Strategy Strategy (2011) indicates that there is a general over provision of 15 adult football pitches and 2.5 mini pitches within the Greater Eston area. The site currently accommodates 4 adult pitches and 2 mini pitches. There would still therefore be adequate playing pitch provision within the area once these pitches are lost to development.</p> <p>As the northern part of the site was used for a former scrapyard, there could be some localised ground contamination. Any application for the redevelopment of the site will be expected to be supported by a ground investigation survey, with any necessary mitigation works being completed.</p>	To reflect change in employment allocation.
93	Paragraph 5.43	Amend text	<p>Add/Delete: The site is located in the strongest demand area for employment uses in the borough and has good linkages transport links via the A66 to the strategic road network and nearby Teesport. The site would be suitable to meet the needs of a range of end users, but would be particularly suitable for small and medium sized businesses similar to those already present on</p>	To reflect change in employment allocation.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			Skippers Lane Industrial Estate.	
93	After Paragraph 5.43	Insert new paragraphs	<p>Add: The site currently has outline planning permission for a mixed use development comprising of residential and industrial/business uses. The landowner however has indicated that they no longer wish to pursue residential development on the site and therefore the site has been included as a purely employment allocation.</p> <p>As the site is located adjacent to existing residential uses, it will be necessary for complimentary uses to be located along the western boundary of the site and an adequate buffer to be retained to ensure that the residential amenities of nearby occupants is adequately protected. A landscaping buffer should also be provided along the eastern boundary of the site to limit the environmental impact of the proposals.</p> <p>Tees Valley Wildlife Trust have previously identified that the site has a number of mature trees and hedgerows which should be retained. It is therefore required that an ecological survey is undertaken to identify the biodiversity value of the site and that any necessary mitigation measures are implemented.</p> <p>The site is previously developed land and therefore there could be some localised ground contamination. Any application for the redevelopment of the site will be expected to be supported by a ground investigation survey, with any necessary mitigation works being completed.</p>	To reflect change in employment allocation.

Policy ED8 Rural Economy

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
94	Paragraph 5.45	Amend text	<p>Delete: The Regeneration Masterplan includes proposals to improve the rural economy, which is supported by the aim of securing 100% high speed broadband throughout the borough. The policy reflects this vision.</p> <p>Add: The Council's Regeneration Masterplan and Tees Valley Unlimited's Strategic Economic Plan both include proposals to improve the rural economy, including the aim of securing 100% high speed broadband throughout the borough. The policy reflects this vision.</p>	DLP 1189: To include reference to Tees Valley Unlimited's Strategic Economic Plan.

Policy ED9 Leisure and Tourism Development

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
95	After ED9 (c)	Add text	Add d. expanding the leisure and tourism economy by capitalising on other heritage assets within the borough;	DLP767: To indicate that other heritage assets can be utilised to promote the borough as a leisure and tourism destination.
95	Policy ED 9 (f)	Amend text	Add/Delete: expanding the leisure and tourism economy of the rural areas, capitalising on the borough's natural assets of the borough and the surrounding area, particularly the North York Moors National Park.	DLP 435 & 458: To strengthen reference to the North York Moors National Park, its significant draw as a tourist destination and the potential tourism benefits for the surrounding area.
95	Policy ED 9	Add text	Add: Losses of tourist accommodation through change of use or demolition will only be supported where it can be clearly demonstrated that they are no longer financially viable, or their loss would secure wider regeneration benefits.	DLP 530: To allow for the loss of poor quality units which would improve the overall appearance of the area.
95/96	Paragraph 5.48	Amend text	Delete: Work is also underway on a new leisure centre within the town, which is due to open in 2014.	To reflect the opening of the Redcar & Cleveland Leisure

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			Add: The Redcar & Cleveland Leisure and Community Heart was also recently opened in the town centre, providing a new state of the art leisure centre and swimming pool, alongside a range of civic facilities.	and Community Heart.
96	After Paragraph 5.51	Add Paragraph	Add: The North York Moors National Park (part of which is located within the borough boundary) is a highly valued and distinctive landscape, which acts as a significant draw for visitors. Being located on the edge of the national park, large parts of the rural area of the borough benefit from the tourism and visitor numbers that the national park attracts. The Council will seek to work closely with the North York Moors National Park Authority to increase visitor numbers to the area and improve the leisure and tourism facilities on offer.	DLP 435 & 458: To strengthen reference to the North York Moors National Park, its significant draw as a tourist destination and the potential tourism benefits for the surrounding area.
96	Paragraph 5.52	Add text	Add: The borough has a wide range of public footpaths and bridleways which allow access to large parts of the rural areas for the enjoyment of all, including a substantial section of the Cleveland Way National Trail and an alternative Coast to Coast route. The section of the England Coast Path which passes through the borough is also due to be opened in 2015. Upon the opening of this section of the England Coast Path, Saltburn will become one of only a handful of locations in the country to be at the junction of two National Trail routes, which offers the opportunity for significant tourism benefits. Watercourses also offer the opportunity to connect inland and coastal tourism in a sustainable way and will be supported.	DLP121 & 710: To include reference to the England Coast Path, an alternative Coast to Coast route and the potential tourism benefits associated with these and reference to how watercourses could be better utilised to link inland and coastal tourism.
97	Paragraph 5.54	Amend text	Add/Delete: The Council will support leisure and tourism developments within the borough to help deliver the Council's aspirations set out within the	To include reference to Tees Valley

			Council's Regeneration Masterplan and Tees Valley Unlimited's Strategic Economic Plan.	Unlimited's Strategic Economic Plan

Policy ED10 Caravan Sites and Tourist Accommodation

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
98	After Policy ED 10 (c)	Add text	Add: d. would not have an adverse impact upon designated biodiversity or geological sites, unless appropriate mitigation can be provided in accordance with Policy N4.	DLP827 & 1150: To protect designated biodiversity and geological sites in accordance with Policy N4.
98	Policy ED 10	New Paragraph	Move text to new paragraph: Any proposals located within 5km of a Natura 2000 site will be required to carry out a screening exercise to determine the need for an Appropriate Assessment.	For clarity
98	Policy ED 10	Add text	Add: Development should be directed to areas at least risk of flooding. Proposals will not be acceptable in Flood Zone 3 and will only be supported in Flood Zone 2 if both the sequential and exceptions tests have been met.	DLP700: To direct development to areas at low risk from flooding in accordance with planning guidance.
99	After Paragraph 5.59	Add text	Add: As a highly vulnerable use, proposals for caravan, chalet and camping sites should be directed to areas at low risk from flooding. Development will not be allowed within Flood Zone 3 and will only be considered acceptable in Flood Zone 2 if both the sequential and exceptions tests have been met. In order to protect water quality in the surrounding areas, sewage from sites should be connected to the existing network, where possible. Where alternative forms of sewage are required, an Environmental Permit will be required from the Environment Agency.	DLP700: To direct development to areas at low risk from flooding in accordance with planning guidance. To effectively manage sewage to protect water quality.

Policy ED11 New Hotel and Guest House Accommodation

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
100	Option ED 11a	Delete text	Delete: Option ED 11a New Hotel and Guest House Accommodation Other Options: Site specific policy covering areas where such uses are an issue.	Option ED 11a has not been pursued through the plan.
101	Paragraph 5.64	Delete text	Delete: The Council proposes to ensure that these measures are satisfied through Policy ED11, which deals with such proposals throughout the borough as a whole. However, we would welcome your thoughts as to whether the policy would work better if it was more area specific, and applied only to those areas where there is a high concentration of larger housing which could easily be converted to tourist accommodation.	Option ED 11a has not been pursued through the plan.

Policy ED12 Equestrian Development

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
101	Policy ED 12	Add text	Add text: All proposals will be expected to provide appropriate manure storage and dirty water handling facilities.	DLP 711: To ensure appropriate manure and dirty water handling facilities to protect watercourses from contamination.
101	Paragraph 5.65	Add text	Add: There has been a steady increase in the number of equestrian related developments in the borough over recent years, particularly in the urban fringe...	For clarity
101	After Paragraph 5.65	Add text	Add text: If not managed correctly, the manure and dirty water associated with livery stables has the potential to affect the quality of watercourses and the quality of bathing waters within coastal areas. It should therefore be ensured that any new development has appropriate manure storage and dirty water handling facilities in order to protect water quality.	DLP 711: To ensure appropriate manure and dirty water handling facilities to protect watercourses from contamination.

Policy H1 Housing Requirements

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
104	Policy H1	Text and table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30, and consequential changes to the phasing periods.	To reflect changed timescales for plan adoption
104	Policy H1	Text and table amended	Housing requirement updated from 270 per annum to 260 per annum. Housing requirement for each phase updated from 1,350 to 1,300. Total housing requirement updated from 4,050 to 3,900.	To reflect new evidence (ONS data) and the strategy in 'Our Plan'
104	Policy H1, 4 th Paragraph	Text amended	To promote a flexible and continuous supply of housing land in line with national policy and to reduce the risk of under-delivery, the plan allows for the development of up to approximately 4,500 dwellings gross (equivalent to 300 per annum and an increase of over 10% about 15% against the minimum requirement).	For clarity and to reflect new policy position
104	Paragraph 6.5	Text amended	Delete: The preferred requirement seeks to strike an appropriate balance between aspiration and realistic achievability and has been derived from consideration of the following: <ul style="list-style-type: none"> • the most recent official household growth projections; • consideration of housing need and demand identified in the Tees Valley Strategic Housing Market Assessment; 	To reflect new evidence and approach

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<ul style="list-style-type: none"> • historical housing construction rates; • employment growth trends and economic development policy implications; and • in seeking to stabilise and reverse population decline and support the development of sustainable communities and the regeneration of the borough. <p>Add: The requirement seeks to strike an appropriate balance between aspiration and realistic achievability and has been derived from consideration of the following:</p> <ul style="list-style-type: none"> • the most recent official population projections; • consideration of housing need and demand identified in the Tees Valley Strategic Housing Market Assessment; • historical housing construction rates; and • supporting the Council’s broader strategic aims to stabilise and reverse population decline, support the development of sustainable communities, and the economic growth and regeneration of the borough. 	
105	Paragraph 6.6	Add text	Add: The population of the borough has been steadily declining over the last three decades and Redcar and Cleveland is amongst a small group of local authorities which lost population between 2001 and 2011. At the same	For clarity

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			time, there is a growing imbalance between an increasing elderly population reliant on public services, and a diminishing working-age population to service those needs. Demand for additional dwellings is also ongoing...	
105	Paragraph 6.7	Amend text	<p>Delete: The Office for National Statistics (ONS) interim projections for 2011-2021 estimate household growth of 200 households per annum in the borough and these figures have assumed the basis for identifying the proposed requirement. Providing sufficient housing to meet projected demand through household growth is not however likely to achieve a stable and balanced population as the household projections are themselves based on a continuation of existing trends.</p> <p>Add: The Department for Communities and Local Government (CLG) interim projections for 2011-2021 estimate household growth of 200 households per annum in the borough. However, analysis of the ONS sub-national population projections (May 2014) suggests that household growth for the period 2015 – 2030 will average approximately 150 per annum. It is this data that will be used by CLG in their forthcoming household growth projections (anticipated autumn 2014) and, as such, we have used this position as our baseline for determining our housing requirements.</p>	DLP1193 for accuracy and to reflect new evidence and approach
105	Paragraph 6.8	Amend text	Delete: Furthermore, prospective economic growth within Redcar and Cleveland and the Tees Valley will also create demand for new housing. To support sustainable economic development, it is important that sufficient housing is provided alongside other key requirements such as an	For clarity and to reflect new evidence and approach

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>appropriately skilled workforce and adequate service infrastructure capacity.</p> <p>Add: The ONS sub-national population projections also suggest that our overall level of population will stabilise over the plan period, with a slight increase towards the end of the period. Nevertheless, the profile of the population is projected to change with a significant decline in the working age population alongside a significant increase in the number of residents aged 65 years or older. If the challenges presented by this demographic imbalance are to be addressed, it is imperative that the housing requirement is sufficiently aspirational to support population retention, attract working households to live in the borough and to promote the development of sustainable communities.</p>	
105	Paragraph 6.9	Amend text	<p>Delete: Over the course of the plan period, the local labour market may expand with additional employment opportunities emerging due to the following:</p> <ul style="list-style-type: none"> • through the creation of new jobs based around a more diversified, advanced and resilient local economic base which is being pursued by Tees Valley Unlimited and through the Redcar & Cleveland Regeneration Masterplan; and • from meeting growth in ‘replacement demand’—filling an increasing number of job vacancies arising from a higher proportion of workers retiring, taking into account the proposed increase in the retirement age under the 2011 Pensions Act. <p>Add: In response to this, and in order to help rebalance the population,</p>	For clarity and to reflect new evidence and approach

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			Redcar & Cleveland Borough Council has recently agreed through its Corporate Plan (Our Plan 2014-19) a strategic aim to grow our population by 2,500 people over a 10-year period starting in 2014. This is roughly equivalent to an increase of 2% over this period and has particular focus on attracting families to the borough. The housing requirement has, therefore, been derived from extrapolating the annualised increase in population to the end of the plan period.	
105	Paragraph 6.10	Amend text	<p>Delete: The population of the borough has been steadily declining over the last three decades and Redcar and Cleveland is amongst a small group of local authorities which lost population between 2001 and 2011. At the same time, there is a growing imbalance between an increasing elderly population reliant on public services, and a diminishing working-age population to service those needs. If the significant challenges presented by this demographic imbalance are to be addressed, it is imperative that the housing requirement is sufficiently high to support population retention, attract working households to live in the borough and to promote the development of sustainable communities.</p> <p>Add: Prospective economic growth within Redcar and Cleveland and the Tees Valley will support the demand for new housing. Similarly, to support sustainable economic development, it is important that sufficient housing is provided alongside other key requirements such as an appropriately skilled workforce and adequate service infrastructure capacity.</p>	For clarity
106	Paragraph 6.11	Amend text	Delete: It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing	For clarity

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>demand due to prospective economic growth and in seeking to redress population imbalance and decline. In that regard, the Council believes that a minimum annual requirement of 270 dwellings is appropriate for the following reasons:</p> <ul style="list-style-type: none"> ● it would satisfy local housing needs and aspirations and enable the identification of an appropriate mix of sites to broaden and improve the housing offer in the borough; ● it would provide for an increase in development above household projections and would therefore allow for a higher level of housing demand arising from employment growth forecasts and aspirations and promote a more stable and balanced population; and ● in accordance with the aims of the NPPF, it would enable a significant increase in housing supply but is also realistically achievable as it would fall within the indicative development capacity over the market cycle; over the last twenty years or so housing completions in the borough have averaged about 290 per annum gross. <p>Add: Over the course of the plan period, the local labour market may expand with additional employment opportunities emerging due to the following:</p> <ul style="list-style-type: none"> ● through the creation of new jobs based around a more diversified, advanced and resilient local economic base which is being pursued by Tees Valley Unlimited’s Strategic Economic Plan and through the 	

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>Redcar & Cleveland Regeneration Masterplan; and</p> <ul style="list-style-type: none"> from meeting growth in ‘replacement demand’ - filling an increasing number of job vacancies arising from a higher proportion of workers retiring, taking into account the proposed increase in the retirement age under the 2011 Pensions Act. 	
106	Paragraph 6.12	Amend text	<p>Delete: The Council supports the inclusion of a gross target above the minimum requirement to reduce the likelihood of an undersupply situation developing because of high stock losses or site development delays. Due to unusually high levels of housing clearance linked to housing market renewal programmes, net housing completions since 2004 fell significantly behind cumulative requirements in the Regional Strategy and Local Development Framework (LDF) and the preferred minimum requirement is similar to that in the LDF.</p> <p>Add: In addition to meeting household growth projections, the housing requirement allows for an increase in housing demand which is aligned to the Council’s strategic aim to redress population imbalance and decline and support economic growth. In that regard, the Council believes that a minimum annual requirement of 260 dwellings is appropriate for the following reasons:</p> <ul style="list-style-type: none"> it would satisfy local housing needs and aspirations and enable the identification of an appropriate mix of sites to broaden and improve the housing offer in the borough; 	For clarity and to reflect new evidence and approach

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<ul style="list-style-type: none"> • it would provide for an increase in development above household projections and would, therefore, allow for a higher level of housing demand to promote a stable, increased and more balanced population, including an increase in family households, and to support employment growth; and • it would enable a significant increase in housing supply whilst remaining realistically achievable as it would fall within the indicative development capacity over the market cycle. 	
106	Paragraph 6.13	Amend text	<p>Delete: The gross target represents a modest increase against the net requirement.</p> <p>Add: The Council supports increasing the housing land supply against the requirement as this will reduce the likelihood of an undersupply situation developing because of unanticipated stock losses or site development delays. The over-allocation represents a modest increase over the minimum requirement.</p>	For clarity in response to reps about confusion over having a 'gross target' and a 'net requirement'.
106	Paragraph 6.14	Amend text	<p>Delete: The LDF and Regional Strategy divided the housing requirements into five-year phases to promote the managed delivery of housing supply. The Council supports the continuation of this approach and the appropriately phased release of sites for development for the following reasons:</p> <p>Add: The Council supports the continuation of dividing the housing requirement into five-year phases to promote the managed delivery of housing supply and the appropriately phased release of sites for development for the following reasons:</p>	For clarity

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
107	Paragraph 6.15	Add text	The figures also reflect the current level of housing commitments, short-term delivery prospects as evidenced in the estimate of five year housing supply, the range of sites included at Policy H3 and REG3 and the longer lead-in times required to bring forward some larger sites for development.	For clarity/accuracy
107	Option H1a	Delete text	<p>Delete: Option H 1a</p> <p>Housing Targets and Phasing</p> <p>Rejected Options</p> <p>The Council believes that a lower requirement, including one based purely around the interim household growth projections, would be inappropriate for the following reasons:</p> <ul style="list-style-type: none"> • further population decline and the growing imbalance between working age and retired people would be more likely to continue; • social housing needs and the demand for market housing may not be satisfied over the plan period; and • it would be less conducive to supporting economic growth and regeneration aspirations. <p>Advocating a higher requirement, such as that previously set out in the Regional Strategy (340 dwellings per annum net), would be unrealistic for the following reasons:</p> <ul style="list-style-type: none"> • it may not be achievable given the indicative historic development 	Option deleted for publication. Policy has been amended to take account of proposed approach.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>capacity and could result in a counterproductive oversupply of housing land which would undermine the development viability of some sites, and the strategic delivery of the plan;</p> <ul style="list-style-type: none"> • it is more likely to present difficulties in maintaining a deliverable five-year housing supply, which could result in more unplanned development in less sustainable greenfield locations; and • it may be difficult to justify, through the plan-making process, a further increase on top of what is proposed bearing in mind the relatively limited projected growth in household numbers. 	

Policy H3 Housing Allocations

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
112	H3 policy text	Table added	The updated allocations table has been moved from the supporting text into the policy box	In response to reps #1195 and #903.
112	H3 policy text	Policy Wording	Housing site allocations are required in order to the housing site allocations set out below are required in order to:	To sync with the inclusion of the allocations table in the policy text
112	Policy H3 (a).	Policy Wording	2014-2029 '2015-2030'	To reflect the changed plan period.
113	H3 6.29	Text deleted	The balance of the requirement will be met on the preferred allocations set out at Table 6.	Superfluous
	H3 6.31	Text amended	The phasing of sites seeks to achieve a balance of supply across the plan period and in terms of: development types; broad locations; site size; any identified delivery constraints; and whether there is planning consent and detailed proposals in place. The phasing of sites is indicative rather than restrictive and seeks to demonstrate that a consistent and balanced housing supply can be achieved across the plan period and between different areas of the borough. Site delivery assumptions also reflect the scale of development and site characteristics, any identified delivery constraints and whether there is planning consent and detailed proposals in place.	To further explain and justify the rationale for phasing.
	H3 supporting text	Text added	The above allocations are identified in addition to the supply from ongoing major residential developments and 'small windfall' sites, as	To reflect changed structure of text and

			shown in Table 6 below.	in recognition of small windfall contributions.
	H3 6.32	Text deleted	Justification for the preferred sites, estimated housing yield and site delivery is set out in the site specific policies below and in more detail in the supporting housing background evidence paper.	Superfluous.
	H3 Table 5	Table updated and amended	Becomes Table 6.	In response to reps #1195, #903 and #344.
	H3 supporting text	Text added	The figures include an allowance for completions on 'small windfall' sites (schemes providing fewer than 10 additional dwellings) based on recorded outstanding commitments. Windfall completions - on large as well as small sites - can fluctuate and are difficult to predict over the long term, but they are nonetheless an important source of supply and will continue to come forward over the plan period.	In response to rep #285 re. small windfall contributions

Policy H3.1 Marske Inn Farm Strategic Site

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
116	H3.1 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30 and projected completion figures adjusted accordingly.	To reflect changed timescales for plan adoption.
116	H3.1 (a)	Text deleted	mixed-use	To reflect primacy of residential development and ancillary uses.
116	H3.1 (c)	Text amended	a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of development on the landscape and settlement character ;	To ensure the proposed development is in keeping with the character of the adjacent built-up area.
116	H3.1 (g)	Text amended	significant provision of appropriate and highly accessible community green spaces within the site and, potentially, contributions to enhance local off-site facilities; provide multi-functional, highly accessible and well-overlooked community green space within the site core and, potentially, contributions to enhance local off-site facilities;	To promote the creation of highly quality on-site public green space which can meet a range of needs.
116	H3.1 (i)	Text amended	archaeological investigation and adequate boundary treatments to achieve separation from the Scheduled Monument at Hall Close; prior archaeological investigation within and adjacent to the Scheduled Monument at Hall Close and an appropriate scheme which protects and integrates the archaeological area within the proposals;	In response to comments from archaeological conservationists (reps. 652 and 771)..
122	H3.3 Policy Box	Additional policy	the preparation and implementation of a travel plan to encourage	In response to consultation

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
		criterion	more sustainable travel modes, having regard to Policy TA2;	representations and in accordance with Policy TA2.
	H3.1 supporting text	Text amended	<p>The scale of the proposals will necessitate the provision of significant areas of usable green space and, potentially for off site contributions for some types of space. Quantitative open space requirements and financial contributions should be determined in accordance with Policy N3. Public green spaces should be well overlooked and in strategically accessible locations so they provide a communal focal point along with any built community facilities.</p> <p>The scale of the development will necessitate the on-site provision of significant public green space and, potentially, off-site contributions for some types of space. Formal green space should be well-designed and in a highly accessible, prominent and safe location so it is capable of a meeting a range of recreational needs and provides a communal focal point along with built facilities. Quantitative open space requirements and financial contributions should be determined in accordance with Policy N3.</p>	To support the policy changes at H3.1 (g)
	H3.1 supporting text	New paragraph	<p>The Scheduled Monument located to the north-east of the site at Hall Close is the site of Marske Hall. The required archaeological investigation should take in part of the development site immediately to the west of the Scheduled Monument in the event that there are valuable artefacts also present in this area.</p> <p>Any subsequent development proposals should be designed in such a way as to appropriately incorporate the Scheduled Monument in order to promote a distinctive scheme which reflects and safeguards the archaeological value of the site.</p>	To support the policy changes at H3.1 (i)

Policy H3.2 Low Grange Strategic Site

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
119	Title, policy and supporting text	Site Name Changed	Low Grange Farm Strategic Site.	Clarity.
	H3.2 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30.	To reflect changed timescales for plan adoption.
	H3.2 (d)	Text correction	subject to a transport assessment, the construction of vehicular accesses from the A1085 Trunk Road and Church Lane; subject to a transport assessment, the construction of vehicular accesses from the A1085 Trunk Road and North Loop Road ;	In response to rep # 539.
	H3.2 (f)	Text amended	ground investigation to assess any contamination and remediation relating to historic residential and industrial uses on part of the site and at locations nearby; ground investigation and comprehensive risk assessment to assess any contamination and remediation relating to historic residential and landfill uses on part of the site;	In response to Environment Agency comments (rep # 712).
	H3.2 Policy Box	Additional policy criterion	the preparation and implementation of a travel plan to encourage more sustainable travel modes, having regard to Policy TA2;	In accordance with Policy TA2 and to reflect national planning guidance.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
	H 3.2 supporting text	New Paragraph	Northerly parts of the site are previously developed, including landfill operations undertaken towards the northwest corner some 30-35 years ago. Ground investigation and comprehensive risk assessment are required in terms of the latter to monitor any landfill gas migration.	To clarify the policy changes at H3.2 (f).
121	6.52	Text amended	<p>The recent retail development at Low Grange incorporated a sustainable urban drainage system (SUDS) and it is anticipated that a similar approach will be required for the residential element.</p> <p>The recent retail development at Low Grange Farm incorporated a sustainable urban drainage system (SUDS) and it is anticipated that this will be required for the residential element. Consideration of SUDS solutions should investigate the potential for watercourse de-culverting as such an approach could promote the restoration of natural habitats and biodiversity.</p>	In response to Environment Agency comments (rep # 712).

Policy H3.3 Swan's Corner, Nunthorpe

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
122	H3.3 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30.	To reflect changed timescales for plan adoption.
122	H3.3 Policy Box	Additional policy criterion	achieving development which respects the character and enhances the appearance of the area, having regard to any potential impact on the setting of Upsall Hall;	In response to comments from English Heritage (rep # 804).
122	H3.3 Policy Box	Additional policy criterion	the preparation and implementation of a travel plan to encourage more sustainable travel modes, having regard to Policy TA2;	In response to consultation representations and in accordance with Policy TA2.

Policy H3.4 Gypsy Lane, Nunthorpe

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
124	H3.4 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30.	To reflect changed timescales for plan adoption.
124	H3.4 (g)	Criterion amended	incorporate an appropriate landscaping scheme throughout the site, including adequate screening along the western boundary with the railway, the retention of hedgerows where possible incorporate an appropriate landscaping scheme throughout the site, including adequate screening along the western boundary with the railway, the retention of hedgerows where possible and planting along the northern boundary to minimise any impact on views from Ormesby Hall;	Following heritage assessment undertaken in response to rep # 803.
124	H3.4 Policy Box	Criterion added	retaining and where possible enhancing the setting of the Grade-II listed boundary stone within the site boundary;	Following heritage assessment undertaken in response to rep # 803.
124	H3.4 Supporting Text	New text	Outline planning consent for 10 dwellings was granted in March 2014 (application ref. 2013/0765/OOM).	To update planning status.

Policy H3.5 Morton Carr Lane, Nunthorpe

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
126	H3.5 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30.	To reflect changed timescales for plan adoption.
	H 3.5 (c)	Text added	public green space requirements in line with Policy N3, the establishment of a deep woodland buffer and a landscaping scheme throughout the site;	Omission.
	H3.5 Policy Box	Additional policy criterion	preparation of a transport assessment to consider the cumulative impact of development on the wider local highway network;	In response to consultation representations and in accordance with Policy TA2 and national policy.
	H3.5 Policy Box	Additional policy criterion	the preparation and implementation of a travel plan to encourage more sustainable travel modes, having regard to Policy TA2;	In response to consultation representations and in accordance with Policy TA2 and national policy.
	H3.5 Supporting Text	New paragraph	Although the indicative level of development is relatively modest, the proposals will contribute to the significant cumulative level of development in the immediate area and will impact directly on the principal road network at Guisborough Road. Therefore a transport assessment and travel plan are required in accordance with national planning guidance and Policy TA2.	To support and clarify additional policy criteria.
	H3.5 Supporting Text	New paragraph	To support the retention of natural assets, proposals should seek to incorporate and improve some of the young woodland and developed hedgerows as part of the integral open space, woodland buffer and landscaping.	Following advice of subsequent Stage 1 Ecology Report.

Policy H3.6 Longbank Farm, Ormesby

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
128	H3.6 Policy Box	Text amended	<p>Land at Longbank Farm, Ormesby (21.2ha) is allocated for development of up to approximately 320 dwellings and open space uses including a substantial landscaped buffer in the east of the site. The residential element of the scheme should occupy no more than 50% of the land area and achieve an indicative overall density of 30 dwellings per hectare. Indicative housing delivery is phased as follows:</p> <p>Land at Longbank Farm, Ormesby (21.2ha) is allocated for the limited development of up to approximately 225 dwellings and open space uses including a substantial landscaped buffer in the east of the site. The residential element of the scheme should be focussed on western parts of the site, with development minimised in more environmentally-sensitive areas, and achieve an indicative overall density of 30 dwellings per hectare. Indicative housing delivery is phased as follows:</p>	To more accurately reflect policy aspirations for the site.
	H3.6 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30.	To reflect changed timescales for plan adoption.
	H3.6 Policy Box	Additional policy criterion	the preparation and implementation of a travel plan to encourage more sustainable travel modes, having regard to Policy TA2;	In response to consultation representations and in accordance with Policy TA2 and national planning guidance.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
	H3.6 (c)	Criterion amended	<p>a well-designed residential scheme which is fully integrated with the adjacent housing and promotes a 'softening' of the urban edge within the landscape;</p> <p>a well-designed residential scheme which is well integrated with the adjacent housing and promotes a 'softening' of the urban edge within the landscape with development focused on the west of the site, including the area occupied by the farm buildings;</p>	<p>To strengthen policy in order to promote a more coherent and sustainable form of development.</p> <p>The inclusion of a service corridor wayleave along the western boundary (crit. k.) may restrict the potential to 'fully' integrate the development with existing housing.</p>
	H 3.6 (e)	Criterion amended	<p>avoiding restricting development within the higher and more environmentally-sensitive parts of the site and minimising disturbance to wildlife areas within and adjacent to the site;</p>	<p>Some development will need to take place on higher parts of the site, including access.</p>
		Criterion added	<p>undertake a flood risk assessment and incorporate an appropriate sustainable urban drainage scheme within the development;</p>	<p>In response to representations from local residents.</p>
	6.73	Word inserted	<p>Subject to overcoming access constraints, sensitive residential development at this location provides an opportunity to achieve a high quality extension to the housing area east of Ormesby Bank linked to significant environmental and landscape improvements. The site is within 1km of Nunthorpe schools and sixth-form college and 500m from a major bus route into Middlesbrough.</p>	<p>To support policy in order to promote a coherent, sensitive and sustainable form of development.</p>
	6.76	Para. amended	<p>The site is in a highly visible hillside location and is adjacent to important natural areas. Hence only partial development is supported, at the western end, with the eastern part of the site to be largely given over to establishing a landscaped woodland buffer. The higher southern part of the site is designated as a Sensitive Landscape Area and Local Wildlife</p>	<p>To support policy in order to promote a coherent, sensitive and sustainable form of</p>

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>Corridor under Policies N1 and N4 respectively, so any development should be strictly limited in that area.</p> <p>The site is in a highly visible hillside location and is adjacent to important natural areas. Hence only partial development is supported, predominantly at the western end, with the eastern part of the site to be largely given over to establishing a landscaped woodland buffer. In addition to minimising negative environmental impacts, such an approach will also promote sustainability by concentrating development close to existing housing and services. The higher southern part of the site is designated as a Sensitive Landscape Area and Local Wildlife Corridor under Policies N1 and N4 respectively, so any residential development should be strictly limited in that location. Although on the periphery of the Eston Hills and remote from the designated historic landscape area, higher parts of the site, and lower parts immediately beyond the existing housing, form part of the Eston Hills landscape tract identified in the Council's Landscape Character Assessment (2006).</p>	development.
6.77		Para. amended	<p>Although development will extend the housing area along the hillside, it will also provide an opportunity to 'soften' the harsh urban edge established by earlier development, thereby complementing the wooded landscape to the east and enhancing the quality of the residential environment. The site is on the periphery of the Eston Hills escarpment and is remote from the designated historic landscape area.</p> <p>The proposals would extend the housing area along the hillside, but would also provide opportunities to 'soften' the harsh urban edge established by earlier development, logically round-off the built-up area east of Ormesby Bank, complement the wooded landscape to the east, visually enhance the landscape and effectively extend the 'green finger' provided by the green wedge to the north of the A174.</p>	To support policy in order to promote a coherent, sensitive and sustainable form of development.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
	6.78	Text amended	<p>To blend in with the existing residential area, proposals should promote continuity with earlier development in terms of house types, building lines and layout through, as appropriate, the provision of single-storey dwellings on higher parts of the site and the inclusion of the farmstead within the development.</p> <p>To blend in with the existing housing, proposals should promote continuity in terms of house types, building and roof lines, materials and layout including, as appropriate, the provision of single-storey dwellings on higher parts of the site. In order to promote containment and cohesion, the development should incorporate the farm buildings and immediate grounds.</p>	To support policy in order to promote a coherent, sensitive and sustainable form of development.

Policy H3.7 Spencerbeck Farm, Ormesby

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
131	H3.7 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30.	To reflect changed timescales for plan adoption.
131	6.81	Additional text	This is a brownfield site is in a highly sustainable location adjacent to a main bus route with frequent connections to Middlesbrough and within 500m of local primary and secondary schools and 1km of Normanby local centre. Detailed planning permission was granted in June 2013 for 41 dwellings, including the clearance of 20 existing properties (application reference R/2011/0589/FFM), including affordable housing provision. The SHMA has identified a need for smaller affordable properties in the south of Greater Eston.	For accuracy.

Policy H3.8 Normanby Hall

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
132	H3.8 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30.	To reflect changed timescales for plan adoption.
132	H3.8 (f)	Word added	detailed tree, ecological, building and archaeological surveys and adherence to recommendations emerging from them;	Following advice of subsequent Stage 1 Ecology Report.
133	6.89	Text added	A detailed drainage investigation is required as a partly culverted watercourse, Middle Gill, crosses the site in a north-westerly direction. There are three drainage channels entering the site at different points, two of which appear to discharge into Middle Gill which may also provide a valuable wildlife corridor between the urban area and the Eston Hills. Development should therefore be carefully controlled in order to avoid this area and proposals should seek to improve Middle Gill through de-culverting and consider its function in the sustainable management of surface water.	Following advice of subsequent Stage 1 Ecology Report.

Policy H3.9 Former Redcar & Cleveland Town Hall and Adjacent Land

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
134	H3.9 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30.	To reflect changed timescales for plan adoption.
134	H3.9 Policy Box	Additional policy criterion	the preparation and implementation of a travel plan to encourage more sustainable travel modes, having regard to Policy TA2;	In response to Highway's Agency comments and to reflect the scale of development..

Policy H3.10 Former Redcar Adult Education Centre

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
136	H3.10 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30.	To reflect changed timescales for plan adoption.
136	H3.10 (g)	Text added	acceptable vehicular access from Corporation Road; subject to a transport assessment, acceptable vehicular access from Corporation Road and any off-site requirements;	To reflect proposed scale of development
136	H3.10 Policy Box	Criterion added	the preparation and implementation of a travel plan to encourage more sustainable travel modes, having regard to Policy TA2;	To reflect proposed scale of development

Policy H3.11 St. Hilda’s Church, Redcar

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
138	H3.11 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30 and delivery moved forward into first phase.	To reflect changed timescales for plan adoption and comments from prospective developer.

Policy H3.12 Bylands Close, Redcar

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
140	H3.12 Policy Box	Text amended	Estimated dwelling yield increased from 40 to 64 .	As per recently submitted layout.
140	H3.12 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30 and delivery moved forward into first phase and revised yield	To reflect changed timescales for plan adoption and recent site proposals which are subject to HCA funding bid.
140	H 3.12 (c)	Criterion removed	off-site contribution towards open space improvements in accordance with Policy N3;	The proposal is for a small-scale self-contained extra-care specialist housing scheme and as such any impact on external open space requirements is likely to be negligible.
141	6.113	Text amended	Estimated dwellings increased from 40 to 64 .	As per recently submitted layout.

Policy H3.13 Connexions Campus (South), Redcar

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
142	H3.13 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30.	To reflect changed timescales for plan adoption.
	H 3.13 (c)	Criterion deleted	'prior completion of the current Wheatlands Chase development'	In response to comment # 731 and in order to provide a continuous and flexible housing supply.
	H 3.13 (f)	Criterion amended	subject to a transport assessment, achieving satisfactory access via the Wheatland Chase site; subject to a transport assessment, achieving satisfactory vehicular access to the site;	In response to comment #731 and following discussion with RCBC highways engineers.
	H 3.13 Policy Box	Additional criterion	The preparation and implementation of a travel plan to encourage more sustainable travel modes, having regard to Policy TA2.	To reflect the proposed scale of development.
	6.117	Para. amended	The redevelopment of the northern end of the Connexions Campus site for 158 dwellings has commenced (the 'Wheatlands Chase' development). It is anticipated that residential development on the remainder of the site, the former playing field, will follow on from this. The redevelopment of the northern end of the Connexions Campus site for 158 dwellings (the 'Wheatlands Chase' development) has commenced and is progressing well. It is therefore anticipated that residential development on the remainder of the site will proceed in due course.	In response to comment # 731 and in order to provide a continuous and flexible housing supply.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
	6.118	Text deleted	The site is in a sustainable location adjacent to a main bus route into Redcar, opposite the Ings neighbourhood centre and within 500m of primary and secondary schools. The site abuts an area of higher value, lower density detached properties at Wheatlands Park and its location therefore presents an opportunity to improve the housing offer in the borough, particularly by increasing the stock of detached properties, for which provision is limited in Redcar.	To emphasise the significance of this site in terms of housing mix in Redcar.
		New para	The site abuts an area of higher value, lower density detached properties at Wheatlands Park and its location therefore presents an opportunity to improve the residential offer, particularly by increasing the stock of larger detached properties, the supply of which is relatively limited in Redcar. This will help to provide a broader and more balanced mix of market housing proposed through the plan and on existing sites.	To emphasise the significance of this site in terms of housing mix in Redcar.
	6.121	Text amended	Subject to a transport assessment, it is anticipated that access will be achieved by extending the estate road serving Wheatlands Chase. Subject to a transport assessment, it is anticipated that access will be achieved by extending the estate road serving the Wheatlands Chase development and / or providing a separate access with Redcar Lane.	In response to comment #731 and following discussion with RCBC highways engineers.
	6.122	Text amended	To achieve a well-designed scheme, proposals should be well-related to adjacent developments and should include the following: <ul style="list-style-type: none"> • strong physical integration with the Wheatlands Chase development to achieve a logical extension to the residential area, potentially including road access; • an appropriate mix of housing which complements the ongoing development with larger detached properties to be focused towards the southern end of the site to reflect the lower density development at the adjacent Wheatlands Park; 	To further clarify policy aspirations for the site and its potential. In response to comment #731 regarding open space provision.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<ul style="list-style-type: none"> • frontage onto Redcar Lane, following the building line to be established by the Wheatlands Chase development; • adequate separation from the electricity substation and sea Cadets hut on the northern edge of the site; and • subject to further assessment, community green space which is easily accessible and well overlooked with properties facing onto it to promote passive surveillance. • larger detached properties to be focused towards the southern end of the site to reflect the lower density development at the adjacent Wheatlands Park. 	

Policy H3.14 Land Adjacent Rye Hills School, Redcar

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
144	H3.14 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30.	To reflect changed timescales for plan adoption.
	6.126	Text amended	<p>The site is relatively small and has an irregular configuration. Redevelopment is therefore unlikely to present any capacity issues and it would be appropriate to seek an off-site contribution towards improving the quality of local spaces.</p> <p>The site is relatively small, with an irregular configuration and the proposed scale of development is modest. It would therefore be appropriate to seek an off-site contribution towards improving the quality of existing spaces.</p>	For clarity.

Policy H3.15 Land adjacent Newcomen School

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
146	H3.15	Allocation deleted	Policy and supporting text deleted	Site is under development.

Policy H3.16 Land Adjacent Errington School, Marske

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
147	H3.16	Allocation deleted	Policy and supporting text deleted	Site is under development.

Policy H3.17 Wilton Lane, Guisborough

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
149	H3.17 Policy Box	Text Amended	Land at Wilton Lane, Guisborough (0.3ha) is allocated for the development of approximately 15 eco-homes , phased as follows: Land at Wilton Lane, Guisborough (0.3ha) is allocated for the development of approximately 14 dwellings , phased as follows:	To reflect planning permission granted in March 2014.
149	H3.17 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30 and delivery moved forward into first phase and revised yield	To reflect changed timescales for plan adoption and recent site proposals which are subject to HCA funding bid.
149	H3.17 Policy Box	Table amended	Estimated dwelling yield reduced from 15 to 14 .	To reflect planning permission granted in March 2014.
149	H3.17 b).	Criterion removed	on-site affordable housing provision in accordance with the requirements of Policy H4;	To reflect planning permission granted in March 2014.
149	H3.17 c).	Criterion removed	an off-site contribution towards local open space improvements in accordance with Policy N3;	To reflect planning permission granted in March 2014.
149	6.139	Text removed	The Council has identified the site as having the potential to deliver highly sustainable eco-homes, following on from the success of the eco-village scheme at South Bank. The developer will therefore be expected to deliver homes with eco credentials.	To reflect planning permission granted in March 2014.
149	6.140	Text removed	Affordable housing should be provided on-site in accordance with Policy	To reflect planning permission

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			H4. The Tees Valley SHMA (2012) has identified a need for predominantly smaller, affordable properties in Guisborough.	granted in March 2014.
150	6.141	Text removed	As the site was previously developed, it will be necessary to undertake ground investigation works and any required remediation prior to development.	To reflect planning permission granted in March 2014.
		New text	Detailed planning permission was granted for 14 dwellings in March 2014 (application reference 2013/0858).	To reflect planning permission granted in March 2014.
		New text	The planning consent is subject to meeting several conditions, including ground investigation and remediation requirements and incorporating a sustainable urban drainage system within the development.	To reflect planning permission granted in March 2014.

Policy H3.18 Jackson's Field, Guisborough

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
151	H3.18 Policy Box	Amended text	Housing yield increased from 73 to 85 .	To reflect detailed planning consent granted in March 2014.
151	H3.18 Policy Box	Amended table	Housing yield increased from 73 to 85 .	To reflect detailed planning consent granted in March 2014.
151	H3.18 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30 and delivery moved forward into first phase and revised yield	To reflect changed timescales for plan adoption.
151	H3.18 Policy Box	Criterion added	f). the preparation and implementation of a travel plan to encourage more sustainable travel modes, having regard to Policy TA2;	To reflect detailed planning consent granted in March 2014.
151	6.144	Text amended	Outline planning permission for residential development has been granted (application ref. R/2011/0931/OOM) and this is reflected in the dwelling estimate, delivery phasing and policy criteria stated above. It is anticipated that a reserved matters application will be submitted in the near future. Detailed planning permission was granted for 85 dwellings in March 2014 (application reference 2014/0241).	To update planning status.
152	6.145	Text deleted	Locally, surface water drainage problems have previously been experienced and the site functions as a natural sink to assist the drainage process. Any proposals should therefore incorporate a comprehensive surface water drainage scheme to ensure that development would not increase run-off from the site.	To reflect detailed planning consent granted in March 2014.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
152	6.147	Text deleted	As the site was historically used as allotments, a ground investigation should be undertaken and any necessary remediation completed prior to development. Similarly, and in order to safeguard any important hedgerows, proposals should also be supported by an ecological assessment to ensure that development would not damage the habitat of any protected species.	To reflect detailed planning consent granted in March 2014.
152	6.148	Text deleted	The landscaping scheme should include a peripheral buffer to provide screening from allotment uses abutting the western boundary and to achieve adequate separation from properties on Rectory Lane in the interests of residential amenity.	To reflect detailed planning consent granted in March 2014.
		New paragraph	The planning consent is subject to meeting a range of conditions, including ground investigation and remediation requirements, a sustainable urban drainage system, a comprehensive landscaping scheme and the implementation of ecological mitigation measures.	To reflect detailed planning consent granted in March 2014.

Policy H3.19 Middlesbrough Road, Guisborough

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
153	H3.19 Policy Box	Table amended	Delivery period updated from 2014/15-2028/29 to 2015/16-2029/30 and delivery moved forward into first phase.	To reflect changed timescales for plan adoption.

Policy H3.20 Former Chaloner Primary School

186	Policy H6 paras 6.248 and 6.249, and Options H6a and H6b	Delete paragraphs and alternative options text boxes	Delete paragraphs and options text boxes.	These alternative options have now been rejected and do not form part of the Local Plan.

Policy H7 Gypsy, Traveller and Travelling Showpeople Accommodation

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
188	Paragraph 6.253	Amend text	Add/Delete: To identify the future need for residential pitches for the plan period, the Council has applied an annual household growth rate of 3% (in accordance with the methodology of the TVGTAA) to the existing number of occupied pitches, which is thirteen. This identified a need for 21 pitches by 2029.	For clarity as site is temporarily closed for refurbishment.
188	Paragraph 6.254	Amend text	Delete: This has thirteen pitches all of which are currently occupied. There is also a warden's pitch and an adjacent area set aside for temporary pitches. Add: However, this site is currently closed for improvement works.	For clarity as site is temporarily closed for refurbishment.
188	After Paragraph 6.255	Add new paragraph	Add: As the Council's only designated site is currently closed for improvement works, the Council has assumed that the number of pitches occupied when reopened would thirteen, which is the same number of pitches which were occupied prior to the temporary closure. On this basis, the Council has identified a need for 21 pitches by 2030.	For clarity as site is temporarily closed for refurbishment and the plan period now extends to 2030.
188	Paragraph 6.256	Amend text	Delete: 2029 Add: 2030	For clarity as the plan period now extends to 2030.

7 Natural Environment

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
189	Para. 7.3	Add text	<p>Green infrastructure also provides an important contribution to the character of the borough and its historic environment, including conservation areas and views and vistas associated with historic estates. Open spaces may also be designated heritage assets, such as historic parks and gardens.</p>	DLP777 English Heritage

Policy N1 Landscape

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
190	Policy N1	Amend wording	High importance will be given to protecting the landscape setting, and scenic Beauty and special qualities of the North York Moors National Park, by ensuring inappropriate development that would result in a significant impact on these features does not take place within our plan area that new development does not harm these interests.	DLP469 North York Moors National Park (new wording agreed with National Park)
190	Policy N1	Amend wording	In Sensitive Landscape Areas, including the historic landscape of the Eston Hills, we will prioritise the retention of elements that make up the landscape character , in many cases with little intervention to change its this character	For clarity.
191	Supporting text N1, para. 7.4	Amend wording	...and the North York Moors National Park , which fringes part of the borough lies within, although this area is outside of the Local Plan area.	Wording changed to make clear that the National Park is within the Borough, although outside of the Plan area, in response to North York Moors National Park comments.
193	Supporting text N1, para. 7.16 , 7.17 and Option N1a and N1b	Delete supporting text and options textboxes	Alternative options considered were including a policy which restricts all development in Sensitive Landscape Areas. However, it was considered that this would be unduly restrictive as some limited development may be able to be accommodated without fundamentally damaging the area's character. Issues related to the Heritage Coast can sometimes be similar to other landscape considerations. For this reason it was decided to include the Heritage Coast within this policy. However, an alternative option could be to include a separate policy within the Local Plan covering the Heritage Coast.	Paragraphs and textboxes detailed alternative options which have been rejected and do not form part of the preferred Plan.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>Sensitive Landscape Areas</p> <p>Rejected option:</p> <p>A policy which restricts all development in Sensitive Landscape Areas.</p> <p>Heritage Coast</p> <p>Alternative option:</p> <p>A separate policy protecting only the Heritage Coast.</p>	

Policy N2 Green Infrastructure

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
195	Policy N2	Addition to policy	... and seek opportunities to improve the water environment.	Environment Agency comment DLP 718
195	Policy N2 a)	Deletion of text	Delete these from criterion 'a) strategic green infrastructure corridors within the borough and linking these to neighbouring areas, in accordance with the Tees Valley Green Infrastructure Strategy'.	For clarity
196	Policy N2	Amend text	Delete text: Where appropriate, the use of planning conditions, planning obligations and Section 106 agreements will be made to secure the provision and maintenance of green infrastructure. Add text: The Council will seek developer contributions towards green infrastructure in accordance with the requirements and standards set out in the Developer Contributions SPD.	For clarity
196	Supporting text para. 7.18	Addition to supporting text	Green infrastructure includes parks, open spaces, playing fields, woodlands, trees, allotments, ponds, public rights of way, private gardens, waterways and wetlands.	Environment Agency comment DLP713
196	Supporting text para. 7.19	Add text	Community involvement should be encouraged from the onset in the design, implementation and management of green infrastructure.	For clarity.
196	Supporting text	Add new paragraph after para. 7.19	Green infrastructure can facilitate water management by allowing space for water, providing sustainable soakaways, and reducing run-off. It can provide an alternative to hard engineering and can also help to improve water quality by reducing the impacts of diffuse pollution. Opportunities	Environment Agency comment DLP 718

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			should be sought to reduce flood risk by utilising green infrastructure for flood storage; provision of ponds or swales; the maintenance or restoration of riparian zones alongside river courses; and the planting of trees, rain gardens or green roofs to intercept rainfall.	
197	Supporting para. 7.25 and Option box N2a	Delete para. 7.25 and Option box N2a	<p>The types of green infrastructure protected by the policy were considered. We want to retain our approach of separating urban settlements from each other, and also the rural communities from the conurbation. The green wedge policy has been successful in achieving the former and strategic gaps the latter. We believe that it would be inappropriate to abandon this approach. We have assessed development sites and in some circumstances consider that limited development can be achieved through revising their extents without compromising the overall aims of the policies.</p> <p>Green Infrastructure</p> <p>Rejected option:</p> <p>Remove protection of green wedges and strategic gaps.</p>	Alternative options have been rejected and do not form part of the Local Plan.
197	Supportive text	Add new paragraph at end	Developer contributions may be required to increase the provision of or to enhance the green infrastructure network. Minimum standards for quantity and accessibility of green infrastructure will be set out in the Developer Contributions SPD. (Foot Note: The Developer Contributions SPD is being prepared in 2014), which will support the implementation of this policy. These standards are drawn from the Green Space Strategy as well as nationally recognised standards from Natural England and the Woodlands Trust. Where there is already sufficient provision to meet current needs, as well as those expected to arise from new development, this should be adequately demonstrated.	For clarity

Policy N3 Provision of Open Space and Leisure Facilities

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
198	Policy N3	Remove references to cultural and community facilities	<p>Provision of Open Space and Recreation Leisure and Community Facilities</p> <p>The Council will safeguard, enhance and, where appropriate, extend our network of open spaces, sport and recreation cultural and community facilities to meet community needs and enable healthy, active lifestyles...</p> <p>As part of housing developments, we will seek a contribution towards open space, sport and recreational and community facilities to serve and support the site. Where possible, provision should be made on-site, in accordance with the standards in the Planning Obligations Supplementary Planning Document, unless:</p>	DLP 433 Theatres Trust. 203	Supporting text, paragraph 7.39	Add text	'...and part of Pinkney and Gerrick Woods'	RSPB comment DLP1238
203	Supporting text, Local Wildlife and Geodiversity Sites, para 7.41	Insert text	<p>Local Sites can be Local Wildlife Sites (LWS) or Local Geological Sites (LGS). These are sites valued at a local level; they represent a range of habitats within the borough including woodland, scrub, marsh, moorland, meadows, grassland, cliffs and ponds.</p> <p>Local Wildlife Sites meet specific, objective criteria for nature conservation value. These criteria, which are based on Defra guidance, have been decided locally by the Tees Valley Local Sites Partnership, which includes representatives of all five Tees Valley local authorities and is responsible for the selection and designation of Local Sites. The Tees Valley RIGS (Regionally Important Geological Sites) group advises the Local Sites Partnership on the selection and management of Local Geological Sites.</p> <p>The Local Plan will continue to protect these sites and encourage and support opportunities to enhance them, including working with the Local Sites Partnership. The selection and designation of sites is an on-going</p>	DLP317 Tees Valley Nature Partnership

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			process and additional sites may be selected or de-selected throughout the Plan period. Designated Local Sites will be kept will be kept up to date on the on-line Proposals Map.	
203	Supporting text, Wildlife Corridors and Connectivity, after para.7.45	Add new paragraph after 7.45	The North York Moors National Park Management Plan identifies a number of strategic connections with the Plan area where there are opportunities to improve connections with the National Park.	DLP471 North York Moors National Park
204	Supporting text, new paragraph after 7.51	Add paragraph after 7.51	Watercourses The River Tees and our neighbourhood water courses also provide an important role as wildlife corridors. The biodiversity and habitat of water courses should be maintained and enhanced, and opportunities sought to improve the water environment. Opportunities to create wet woodlands for the benefit of flood risk mitigation, water quality improvement and enhanced biodiversity will also be supported.	DLP 719 Environment Agency comment

8 Historic Environment

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
205	Historic Environment, para. 8.3	Amend text	The borough contains some of the finest heritage assets...	DLP650, North East Archaeological Research, for clarity
205	Historic Environment, after para. 8.2	Insert new paragraph	A Heritage Asset is defined by the NPPF as: a building, monument, site, place, area or landscape identified as having a degree of significance meriting consideration in planning decisions, because of its heritage interest. Heritage asset includes designated heritage assets and assets identified by the local planning authority (including local listing). A Designated Heritage Asset is defined by the NPPF as: a World Heritage Site, Scheduled Monument, Listed Building, Protected Wreck Site, Registered Park and Garden, Registered Battlefield or Conservation Area designated under the relevant legislation.	DLP650, North East Archaeological Research
205	Historic Environment, para. 8.1	Amend text	The historic environment is a term used to embrace all the historic aspects of our environment, as they includes all aspects of the environment resulting from the interaction between people and places through time, including all surviving physical remains of past human activity, whether visible, buried or submerged, and landscaped and planted or managed flora. It includes archaeological sites, historic landscapes, standing buildings, parks and gardens, semi-natural environments such as wood, heath and moor, or historic land uses such as industry, farming, defence, communications and even tourism.	DLP650, North East Archaeological Research to clarify definition of historic environment
205	Historic Environment, para. 8.3	Delete text	These sites (and others) are of significant value locally, nationally and internationally	DLP650, North East Archaeological Research to clarify definition of historic

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
				environment
205	Historic Environment, para. 8.3	Amend text	...partners, in particular English Heritage including national agencies, to succeed.	DLP650, North East Archaeological Research
205	Historic Environment, after para. 8.3	Insert new paragraph after 8.3	Development proposals which affect the historic environment will need to sustain the borough's local distinctiveness and character by safeguarding, conserving and enhancing designated and undesignated heritage assets and their settings.	DLP650, North East Archaeological Research
205	Historic Environment, para. 8.3	Amend text	Therefore, we must take a collaborative approach working with heritage owners and other partners...	DLP779, English Heritage
205	Historic Environment, after para. 8.3	Insert new paragraphs after 8.3	<p>The Council will work proactively with owners of heritage assets to remove buildings, monuments and conservation areas from the Heritage at Risk register, encouraging sustainable reuse of buildings where appropriate, and sympathetic repair. We will work proactively with owners to minimise heritage assets becoming at risk. Where necessary the Council will use enforcement powers outlined in 'Stopping the Rot' to bring about repairs to heritage at risk, and consider and enforce Article 4 Directions to positively manage the historic environment in conservation areas. The Council will seek to introduce a buildings at risk register for Grade II listed buildings. We will support local communities seeking grant funding from external sources to encourage conservation.</p> <p>All of our Conservation Areas have up-to-date Conservation Area Appraisals which outline opportunities for enhancement. These appraisals will be kept under review and will be utilised to inform development and enhance conservation areas and heritage assets. At Kirkleatham we will investigate a strategic masterplan approach for the conservation led regeneration of the historic estate.</p>	<p>DLP779, English Heritage, to ensure conformity with NPPF</p> <p>DLP650, North East Archaeological Research</p>

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>We will seek opportunities to improve the historic environment, heritage assets and their settings, including the use of S106 agreements where appropriate. Development proposals which affect the historic environment will need to sustain the borough's local distinctiveness and character by safeguarding, conserving and enhancing designated and undesignated heritage assets and their settings.</p>	

Policy HE1 Conservation Areas

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
206	Policy NE1, criteria d and e	Add text	<ul style="list-style-type: none"> d. it is demonstrated that the structural condition of the building or structure prevents its repair; e. the building or structure makes no significant positive contribution to the architectural or historic character of the conservation area; 	DLP654, North East Archaeological Research Ltd
207	Policy NE1, para. 8.8	Add text	In many areas special 'Article 4 Directions' have been introduced to give extra protection. This means that in these areas even minor alterations, for example constructing a porch, replacing windows or re-roofing could require planning permission.	DLP345, Mr P Thomson

Policy HE2 Heritage Assets

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
209	Policy HE2 Heritage Assets, Alteration, Extension or Change of Use		Alteration, Extension or Change of Use of a Designated Heritage Asset	DLP650, North East Archaeological Research,
209	Policy HE2 Heritage Assets, Substantial harm or loss of a Designated Heritage Asset	Add text	Where a development will lead to substantial harm or total loss of a designated heritage asset, permission will not be granted unless it can be demonstrated that the harm or loss is significantly outweighed by the need to achieve substantial public benefits that cannot be met in any other way.	DLP781 English Heritage
209	Policy HE2 Heritage Assets, Substantial harm or loss of a Designated Heritage Asset	Amend text	Where a development will lead to substantial harm or total loss of a designated heritage asset, permission will not be granted unless it can be demonstrated that the harm or loss is necessary to achieve substantial public benefits that outweigh that harm or loss and significantly outweighed by the need to achieve substantial public benefits that cannot be met in any other way, or all of the following apply: In applying this test, the applicant will be required to demonstrate that: <ul style="list-style-type: none"> h. the nature of the designated heritage asset prevents all reasonable uses of the site; i. no viable use of the designated heritage asset can be found in the medium term that will enable its conversion; j. conservation by grant funding or some form of charitable or public funding is demonstrably not possible; and k. the harm or loss is significantly outweighed by the benefit of bringing the site back into use. 	DLP650, North East Archaeological Research, to ensure compliance with NPPF.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
210	Policy HE2 Heritage Assets, new sub-section	Insert new sub-section in policy	<p><i>Other harm to a Designated Heritage Asset</i></p> <p>Where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, it will only be permitted where that harm is outweighed by the public benefits of the proposal, including securing its optimum viable use</p>	DLP650, North East Archaeological Research, to ensure compliance with NPPF.
210	Policy HE2 Heritage Assets, new sub-section	Insert new sub-section in policy	<p><i>Non-designated Heritage Assets</i></p> <p>Non-designated heritage assets of archaeological interest that are demonstrably of equivalent significance to scheduled monuments will be considered subject to the policies for designated heritage assets.</p> <p>In determining applications that would result in substantial harm or the total loss of a non-designated heritage asset or its setting, the applicant will be required to demonstrate that the benefits of the development would outweigh any harm or loss of the heritage asset, based on its significance.</p>	DLP650, North East Archaeological Research, to ensure compliance with NPPF.
210	Policy HE2 Heritage Assets, supporting text following policy	Insert new paragraph	<p>Heritage assets, designated and non-designated, are irreplaceable, so any harm or loss will require clear and convincing justification. Heritage policies seek to ensure that the borough's listed buildings, monuments, archaeological sites, landscapes and areas of historic and built heritage significance are preserved and enhanced so that they can continue to make an important contribution to the environment, economy, quality of life and lifelong learning for this and future generations.</p>	DLP650, North East Archaeological Research, to ensure compliance with NPPF.
210	Policy HE2 Heritage Assets, para. 8.11	Amend wording	<p>The Council wishes to encourage the continued upkeep and active use of designated heritage assets with a general presumption in favour of their preservation conservation based upon their significance. The control of the development of, or around, designated heritage assets is stringent since it is of paramount importance that their special qualities are preserved conserved and where possible enhanced contributed to. Development proposals should give due consideration that protected species may be using the building and any</p>	DLP781 English Heritage

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
			<p>proposal will need to comply with the relevant legislation. The Council will have special regard to the desirability of preserving conserving any designated heritage asset or its setting, or any features of architectural or historical interest which it possesses, which enhance contribute to its significance</p>	

Policy HE3 Archaeological Sites and Monuments

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
211	Policy HE3 Archaeological Sites and Monuments	Amend wording	Development that would adversely affect archaeological sites or monuments that are designated heritage assets, or their settings, or important archaeological sites or monuments will not of equivalent significance will only be approved in the most exceptional circumstances and in accordance with this policy and other heritage policies in this plan.	DLP651, North East Archaeological Research Ltd. to ensure accordance with NPPF DLP782 English Heritage
211	Policy HE3 Archaeological Sites and Monuments	Amend wording	Development that may affect a known or possible archaeological site, whether designated or non-designated , will require the results of a desk-based assessment an archaeological evaluation to be submitted as part of the planning application. An archaeological evaluation may also be required.	DLP651, North East Archaeological Research Ltd. DLP1218, The Gisborough Estate to ensure accordance with NPPF
211	Policy HE3 Archaeological Sites and Monuments	Amend policy wording	b.Where in situ preservation is not required, or appropriate satisfactory provision is in place for archaeological investigation, recording and reporting to take place before, or where necessary during, development. Where archaeological investigation, recording and reporting has taken place it will be necessary to publish the findings within an agreed timetable.	DLP651, North East Archaeological Research Ltd. to ensure accordance with NPPF DLP782 English Heritage

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
211	Policy HE3 Archaeological Sites and Monuments	Amend policy wording	Development that affects a site where archaeology exists or where there is evidence that archaeological remains may exist will only be permitted if: a. The harm or loss of significance is necessary to achieve public benefits that outweigh that harm or loss. Harm or loss may be avoided by preservation in situ or refusal;	DLP782 English Heritage
211	Policy HE3, supporting text	Insert new paragraph after 8.15	Applications which are likely to impact on archaeological remains will need to specify any mitigation measures and the steps to be taken to record, retain, incorporate, protect, enhance and, where appropriate, manage the archaeological interest, as part of the proposals.	DLP651, North East Archaeological Research Ltd
211	Policy HE3, supporting text	Para. 8.15	Where development is likely to affect sites of known or possible archaeological interest, an archaeological evaluation will be requested required , the scope of which will be agreed with the Council	DLP782 English Heritage
211	Policy HE3, supporting text	Para. 8.16	The former may be achieved through alterations to the design of the development	DLP782 English Heritage
211	Policy HE3, supporting text	Para 8.14	The Council will ensure important archaeological sites, whether scheduled or not, are protected from inappropriate development. Through the Historic Environment Record (HER) held by the Council contains aims to maintain details of all known sites of archaeological interest in the area, finds, landscapes, buildings and other aspects of the historic environment. In addition, it contains information on past research and investigations. The HER is an ever-changing record , there are currently over 3500 entries within the Redcar and Cleveland HER .	DLP651, North East Archaeological Research Ltd For clarification of the role of the HER.

9 Transport and Accessibility

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
213	Paragraph 9.1	Move Paragraph	Move Paragraph 9.1 to after Paragraph 9.3	DLP 1197: For clarity
213	Paragraph 9.4	Add text	Add: This is also reflected in the sub-regional Tees Valley Statement of Transport Ambition and the Tees Valley Strategic Economic Plan.	DLP 1197: To make reference to the consistency with the Tees Valley Statement of Transport Ambition and the Tees Valley Strategic Economic Plan.

Policy TA3 Improving Accessibility within and beyond the Borough

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
219	Policy TA3 (c)	Add text	Add: the A66, A1053 and A174, particularly Greystones roundabout , working in collaboration with the Highways Agency	DLP 1198: To include reference to improvements proposed at Greystones roundabout
219	Policy TA3 (f)	Amend text	Delete: developing feeder public transport services from surrounding rural areas to ensuring integration with core network services. Add: developing feeder public transport services from surrounding rural areas to ensure integration with core network services.	For clarity
220	Paragraph 9.18	Add text	Add: This will ensure that Redcar and Cleveland...	For clarity
221	Paragraph 9.24	Add text	Add: The Council will continue to work strategically with its neighbouring local authorities and the LEP to maximise on funding opportunities via the Government. The Local Plan is being developed in parallel with the sub-regional Strategic Economic Plan and the Local Growth Fund and is ensuring consistency of objectives.	DLP 1198: To make reference to the consistency with the Tees Valley Strategic Economic Plan and Local Growth Fund.
221	Paragraph 9.25	Amend text	Delete: This includes junction improvements on the A66 which are underway ; and ; Add: This includes junction improvements on the A66 which have recently been completed ;	To reflect completion of junction improvement works on the A66.

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
221	Paragraph 9.25	Add new bullet point	Add: improvements to Greystones roundabout to improve strategic highway capacity.	DLP 1198: To include reference to proposed improvements at Greystones roundabout.
222	Paragraph 9.27	Delete text	Delete: ...projects funded by central, regional and local government.	To reflect the abolition of the regional tier of government.
223	Paragraph 9.32 : Redcar Central Station	Amend text	<p>Delete: a £1.2million upgrade to station facilities and immediate public realm is to take place by the end of 2013. Improvements will include revised layouts and improved accessibility to both the north and south entrances, an enhanced/remodelled eastbound platform and new shelters, full CCTV coverage, real time information screen, and a range of other improvements to passenger facilities throughout the station. This will complement the significant regeneration works to the sea front and town centre including the £31 million Redcar Leisure and Community Heart development, immediately adjacent to the station, which is due to open in 2014.</p> <p>Add: a £1.2million upgrade to station facilities and immediate public realm was recently completed. Improvements included revised layouts and improved accessibility to both the north and south entrances, an enhanced/remodelled eastbound platform and new shelters, full CCTV coverage, real time information screen, and a range of other improvements to passenger facilities throughout the station. This complements the significant regeneration works to the sea front and town centre including the £31 million Redcar and Cleveland Leisure and Community Heart development,</p>	To reflect completion of station improvements and the Redcar and Cleveland Leisure and Community Heart development.

			immediately adjacent to the station, which was opened in April 2014.	
223	Paragraph 9.32: Marske, Longbeck, Redcar East and South Bank stations	Amend text	<p>Delete: a package of works totalling over £300k is currently being designed and is programmed for implementation before the end of 2013. Improvements will include new shelters, full CCTV coverage, improved information and signage and enhanced lighting at South Bank.</p> <p>Add: a package of works totalling just over £300k has recently been completed. Improvements included new shelters, full CCTV coverage, improved information and signage and enhanced lighting at South Bank.</p>	To reflect completion of station improvements.
223/224	Paragraph 9.33	Add text	Add: The Council supports the Tees Valley aim for the electrification of the Northallerton to Middlesbrough railway line.	DLP436: To signal the Council's support for electrification of rail route from Northallerton to Middlesbrough.
224	Paragraph 9.35	Amend text	Add/Delete: ...the Tees Valley has a rail service fit for the 21 st Century and improve services within and beyond the borough, to Middlesbrough, and Tyne & Wear and North Yorkshire.	For clarity.
225	Paragraph 9.38	Add text	Add: Improvement of rail connections to Teesport from East Coast mainline to increase its capacity for more freight movement by rail is a major priority. The Council supports the Tees Valley aim for the electrification of the rail route to Teesport.	DLP436: To signal the Council's support for electrification of rail route to Teesport.

Policy TA4 Sustainable Transport Networks

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
226	Paragraph 3.39	Add text	Add: Works undertaken as part of the Local Sustainable Transport Fund programme (2011-2015), have improved the standard of several paths for use by both walkers and cyclists.	DLP 1199: To make reference to improvements made under LSTF.
226	Paragraph 9.40	Add text	Add: It is also recognised that increased activity in sensitive designated areas such as the Teesmouth and Cleveland Coast SPA or the North York Moors SPA could have an adverse effect on the natural environment. All proposals in sensitive areas will have their environmental impacts assessed in order to ensure that there would be no adverse impacts.	DLP 1239 & 1161: To make it clear that the impacts of proposals upon designated sites will be considered.

Appendix 1 Implementation Plan and Monitoring Framework

Page	Location in draft Plan	Type of change	Wording change (new text in bold)	Reason for change
230	Appendix 1: Implementation and Monitoring Framework	Add paragraph	The implementation of the Local Plan will be monitored annually in the Annual Monitoring Report. This will involve not only quantitative assessment of targets but a qualitative analysis of the wider factors within the borough, and nationally, which may be influencing the implementation of the plan. For some policies and it has not been appropriate to set targets for indicators, in such cases a qualitative analysis will be undertaken to assess policy implementation. While policies will be monitored annually, a review of policies is likely to be triggered where targets have been missed over a number of years or it is clear that inappropriate development is coming forward.	For clarity
230	Appendix 1: Implementation and Monitoring Framework	Replace Implementation and Monitoring Framework with more detailed Implementation and Monitoring Framework		For clarity
230	SD1: Sustainable Design	Amend text	Delete: SD1: Sustainable Design Add: SD1: Sustainable Development	For consistency
234	LS2: Redcar Spatial Strategy	Add text	Add: Redcar Area Spatial Strategy	For consistency
241- 244	ED4- ED9	Correct Policy Numbers	Amend Policy Numbers so that they are consistent with those contained within the policy and rearrange the order of the policies so that they are consistent	For consistency
