

Redcar & Cleveland

Report of Consultation on the Draft Local Plan

June 2014

1	Introduction	3
2	Summary of Comments Received	7

Appendix 1: Individual Comments & Council Responses

Appendix 2: Changes to Local Plan following consultation

I Introduction

- I.1 The Redcar & Cleveland Local Plan is being prepared as a single document to set out the Council's vision, objectives, spatial strategy and policies for the development of the plan area up to 2030. Once adopted, the Local Plan will become the Council's statutory development plan for the borough and will be used to guide development proposals and in the consideration of planning applications.
- I.2 This Report of Consultation has been prepared to set out full details of how consultation was carried out on the Draft Local Plan. It summarises the issues raised and the Council's response to them.
- I.3 Full details of each individual response has been included in Appendix 1 and a full schedule of changes made to the document as a result of the consultation, or any additional work, has been included in Appendix 2.

Overview and Background to the Redcar & Cleveland Local Plan

- I.4 Following the consultation on the Local Plan Scoping Report in November 2012, the Council commenced work on the Draft Local Plan. To help underpin the strategy and policies within the Draft Local Plan, the Council has gathered a detailed and robust evidence base, which includes the following :
- Affordable Housing Offsite Contributions Study
 - Strategic Housing Land Availability Assessment (SHLAA)
 - Housing Background Evidence Report
 - Tees Valley Strategic Housing Market Assessment Update
 - Tees Valley Strategic Flood Risk Assessment
 - Tees Valley Gypsy and Traveller Accommodation Needs Assessment
 - Strategic Retail, Leisure and Office Study Update
 - Tees Valley Hotel Futures Report
 - Tees Valley Rural Accommodation Futures Report
 - Redcar & Cleveland Leisure Needs Assessment
 - Redcar & Cleveland Playing Pitch Strategy
 - Redcar & Cleveland Employment Land Review Update
 - Whole Plan Viability Testing - Redcar & Cleveland Local Plan
 - Draft Local Plan Infrastructure Delivery Plan
- I.5 The Draft Local Plan was agreed by the Cabinet in September 2013, and was subject to a six week consultation between 21 October and 2 December 2013. The purpose of the Draft Local Plan was to set out the Council's preferred policy approach for the Local Plan and to give stakeholders and the general public the opportunity to comment on the document and whether there are other factors the Council should consider.

Consultation Methods

- I.6 Several communication methods were used in consulting on the Draft Local Plan, as follows:

Publication of the Draft Local Plan and Comments Form

- 1.7** Copies of the Draft Local Plan and comment forms were made available to view in all libraries in the Borough and at Redcar & Cleveland House, Kirkleatham Street, Redcar.

Website

- 1.8** The Draft Local Plan and background evidence reports were made available on the Council's website through the online consultation portal. Comments on the Draft Local Plan could also be through the online consultation portal.

Letters and Emails

- 1.9** Over 1,500 letters and emails were sent out to the statutory consultees, individuals and organisations on the Councils Local Plan consultee database inviting them to comment on the Draft Local Plan.

Council Magazine

- 1.10** An article was published in the winter 2013 edition of the Council's residents magazine 'this is Redcar & Cleveland', providing details of the consultation, where the copies of the document could be made and how comments could be made on the draft plan.
- 1.11** Copies of the Council magazine were sent to every postal address in the borough during the consultation period.

Consultation Drop-in Sessions

- 1.12** During the consultation period there was a total of eight drop in events, where members of the public were invited to attend and speak to Council Officers. Drop in events were held at a variety of locations throughout the Borough, as detailed in Table I.

Press Releases

- 1.13** In advance of the consultation starting on the Draft Local Plan, a press release was included within the Evening Gazette, inviting people to engage in the preparation of the Local Plan. The article provided details of the consultation dates and where the document could be viewed.

Publicity

- 1.14** In response to the consultation, articles were published by the Darlington and Stockton Times, the Northern Echo and the Evening Gazette. The majority of the articles published were with reference to preferred housing allocation sites and the support for the inclusion of a traditional pier in Redcar.
- 1.15** Publicity material was placed in all Redcar and Cleveland libraries before the start of the consultation period.

Programme of Consultation Events

- I.16** The following meetings and drop in sessions were attended by Council Officers, where they either presented the Draft Local Plan document or the relevant key issues for that area and invited comments and discussion:

Table I Programme of consultation events for Draft Local Plan

Drop in Consultation session: Skelton Civic Centre	21 st October 2013
Drop in Consultation session : Tuned In! Redcar	23 rd October 2013
Drop in Consultation session: Nunthorpe Youth and Community Centre	28 th October 2013
Drop in Consultation session: Loftus Town Hall	4 th November 2013
Drop in Consultation session: Saltburn Community and Arts Centre	5 th November 2013
Saltburn Neighbourhood Action Partnership	6 th November 2013
Drop in Consultation session: Marske Leisure Centre	8 th November 2013
Drop in Consultation session: Eston City Learning Centre	19 th November 2013
Drop in Consultation session: Sunnyfield House, Guisborough	21 st November 2013

- I.17** Where possible, drop-in sessions were arranged to take place immediately before a town or parish council meeting, providing the opportunity for anyone due to attend the town or parish council meetings to also visit our drop-in events.

2 Summary of Comments Received

Responses Received

2.1 During the consultation we received responses from 957 individuals/groups. Whilst all of the responses received were logged as individuals, a large proportion of these were submitted as a signature to a standard proforma, which had been prepared to object to a particular aspect of the Draft Local Plan on the same grounds/issues. In particular, proformas were used to object to the following:

- Policy H3.1 Marske Inn Farm Strategic Site;
- Housing on Greenfield sites in Nunthorpe/Ormesby;
- Housing on Greenfield sites in Redcar; and
- Seeking the inclusion of a "traditional pier" for Redcar in the plan.

2.2 The responses from individuals and groups raised a total of 1836 individual comments. These comments have been summarised and organised in accordance with the Local Plan structure. The number of comments received on each section and policy are set out below:

Table 2 Number of comments received by section/policy

Chapter / Policy or Page Number	Section / Policy Title	Number of Comments
	Draft Local Plan	27

Key Issues

2.3 The consultation responses highlighted a number of key issues. These have been summarised as follows:

- Objections to the inclusion of specific housing sites, in particular the Strategic site at Marske Inn Farm. Common grounds of concern on all housing sites included, flooding, traffic impacts and the loss of greenfield land. Objections were also made regarding the Council's decision not to include certain sites as allocations.

- Concerns over flooding in general and the wish to see a policy included in the plan do address flooding concerns.
- The proposed housing target (either too high or too low).
- Wishing to see proposals for a "traditional" pier for Redcar included in the plan.

2.4 A more detailed summary of the issues is set out below. Full details of each comment received and the Council's response to it them are set out in Appendix 1. Full details of the changes made to the Local Plan following the consultation are set out in Appendix 2.

Summary of Issues Raised

General comments on Draft Local Plan (inc. SA/HRA)

2.5 There were 27 comments received relating to the document as a whole, or to the accompanying Sustainability Appraisal (SA) and Habitats Regulation Assessment (HRA).

- General support for the document and strategy from neighbouring authorities. However, North York Moors National Park Authority would like it to be made more clear that parts of the national park are within the borough boundary.
- Several objections that the plan does not promote jobs and the strategy is based entirely on building more housing. New jobs should be created before more housing is built.
- Natural England express some concerns over the 5km buffer for the Teesmouth and Cleveland Coast SPA used in the SA. Offers some support to the SA and recommends how it could be improved in other areas.
- The RSPB express concerns over the HRA and potential impacts of the plan on the Teesmouth and Cleveland Coast SPA.
- The plan has too much emphasis on Redcar to the detriment of other areas.
- Would like to see land at Cleveland Gate Business Park included as a regeneration mixed use site for residential and retail uses.
- Feel that that plan does not represent the views of the public and should be written more clearly, with less reference to 'aspirations' and 'issues'.
- Mobile Operators Association would like a specific telecommunications policy to be included.
- HSE recommend that major hazard installations and MAHPs are shown on the Policies Map. Guidance should also be included on compatible uses.
- Photographs should include captions.
- Durham Tees Valley Airport would like the aerodrome safeguarding area to be shown on the Policies Map and a specific policy included on aerodrome safeguarding.
- Not clear why the potash mine is not included in the plan area if its in the borough.
- English Heritage advise that the significance of heritage assets should be considered when allocating sites. Not considering this up front could make sites unjustified, undeliverable and unsustainable.
- Query asking what is happening to the land at Hob Hill.

- There needs to be a more joined up approach to care services.
- North Yorkshire County Council would like consideration to be given to the impact of development on their road network.

Chapter I Introduction

2.6 We received 39 comments relating to this section.

- A number of comments expressed support of the proposed vision and approach, and key outcomes and priorities including Northumbrian Water Ltd. and Natural England.
- Tees Valley Unlimited/Local Enterprise Partnership supported the alignment with the ambitions of the Masterplan and welcomed the reference to TVU and LEP. Suggest that the Local Plan make reference to the Strategic Economic Plan and European Structural and Investment Funds Strategy.
- English Heritage welcome the Vision and Approach for Redcar and Cleveland. The statements and commitments amount to recognition that the historic environment and its heritage assets are a strategic priority for the Council. However, a number of amendments are suggested to strengthen the role within the plan.
- The document is long, wordy, technical and deliberately complicated and convoluted.
- How can statements on managing development so that it is accessible be accurate as public transport cannot meet existing needs.
- Statements on flood risk are contradicted by proposals in the Local Plan.
- Housing plans are at odds with population figures and need.
- Objections to housing at Guisborough and Marske.
- To reduce out migration we need an area people want to live in and jobs for them to do so.
- Tables 3 and 4 are difficult to understand.
- Greater clarity is requested as to the plan period, it is important that it covers a 15 year period.
- The interrelationship between economic growth objectives and the supply of housing is supported by the House Builders Federation and Persimmon Homes.
- Sport England support the vision that residents and visitors alike will be more active and have access to quality sport and recreation facilities and the intention to ensure development is adequately supported by open space, sport, recreation and community facilities. Request evidence document is updated.
- This is an important document for setting a strategic vision for our borough. It is vital that it strikes the right balance between economic development, enabling communities to thrive and prosper, whilst ensuring the natural beauty and unique character of the area is preserved.
- Hope that feedback from the community will be reflected in the final document.
- Would have thought that any opportunity to raise finance for the benefit of key community infrastructure through Community Infrastructure Levy would be welcomed.

- RSPB generally support Vision. There is need to ensure that economic development does not impact detrimentally on the area's protected wildlife. Support the recognition given to the coast and natural environment as assets which contribute to quality of life and attract new investment.
- Development has not been accompanied with improvements in infrastructure and transport.
- The rural economy also includes food production which should be recognised.
- Too much emphasis on larger executive housing.
- Development should be in urban areas not greenfield sites.
- Tees Valley Nature Partnership support the approach to set out a strong vision from which to build the Local Plan and some additional wording to further recognise the value of natural assets.
- Would like to see improvements to Redcar High Street East.
- The Highways Agency were generally supportive of the plan's visions and aspirations and requested some additions.
- The Marine Management Organisation suggested reference was included to the Marine and Coastal Access Act (2009), Marine Policy Statement, Marine Plans and Licensing.

Chapter 2 Sustainability and Design

2.7 We received 2 comments relating to this section.

- RSPB welcome the inclusion of a definition and explanation of sustainable development in the Local Plan.
- English Heritage indicates that Local Plans should contain strategic policies to conserve the historic environment and explain how the presumption in favour of sustainable development will work locally. The policies need to clearly be strategic, so that they cannot be overridden by a neighbourhood plan. A statement clarifying matters should be provided in order to satisfy the NPPF.

Policy SD1 Sustainable Development

2.8 This policy attracted 8 comments.

- There was support for general principle of taking a positive approach towards the presumption in favour of sustainable development.
- Further clarification it needed on how conflicts between economic growth and the impact on important environmental sites will be resolved.

Policy SD2 Locational Policy

2.9 This policy attracted 33 comments.

- Marske should not be included as part of the conurbation, it is part of East Cleveland.
- A number of consultees thought that Greenfield sites should not be built on, whereas a number of developers and landowners thought that additional greenfield sites should be released where they are sustainable and deliverable.
- The NPPF seeks to simply encourage the re-use of previously developed land; it does not priorities such land.

- RSPB recommend that a strategic masterplan for the conservation and enhancement of biodiversity is produced.
- RSPB recommend investing in further data and evidence gathering to make informed and evidence-led decisions in the HRA with regards to identifying suitable strategic mitigation ahead of allocating development.
- Request that Lazenby is not included within the conurbation.
- The sequential approach to development sites does not accord with the NPPF and should be replaced with a statement encouraging the re-use of brownfield sites.
- More housing should be proposed in Redcar.
- More housing should be proposed in Saltburn.
- Natural England advise that further consideration to the application of HRA screening to specific development classes and size be given.
- The NYM National Park supports the policy and the designation of Newton under Roseberry as a 'village'.

Policy SD3 Development Limits

2.10 This policy attracted 15 comments.

- The RSPB recommend that the policy be amended to indicate that the redevelopment of land outside development limits will only be acceptable if sites are not of high environmental value.
- There was a request to include land at High Farm within development limits.
- There was a request to include land at Woodcock Wood within development limits.
- There was a request to include additional land (plot known as Ardmore) to be included within development limits.
- English Heritage advise that policy text would be more appropriate to be amended to 'conservation and where appropriate, enhancement' rather than preservation and conservation.
- The Council should put in place a flexible criteria based policy mechanism to give positive consideration to development proposals on sustainable but unallocated sites when there is a shortfall in housing supply.
- The inclusion of 'safeguarded land' will provide greater certainty over the delivery of future requirements.

Policy SD4 General Development Principles

2.11 This policy attracted 27 comments.

- There was a concern over the requirement to reduce the energy requirement by 10% over and above Building Regulations due to the forthcoming amendments to Building Regulations and the Governments push for zero carbon.
- The Government are currently consulting on a wide range of housing standards and allowable solutions. The outcomes of this consultation should be taken into account when developing the policy.
- English Heritage advise that development should respect or enhance the historic environment and both designated and non-designated heritage assets.

- Development on flood risk areas should not be allowed.
- The RSPB advice that distinction should be made between the hierarchies of internationally, nationally and locally important environmental assets.
- New criteria should be added, which requires new development proposals to be sustainable accessible or capable of being made to be sustainable accessible.
- Reference should be made to the Water framework Directive.
- The Environment Agency advise that the policy should set out how the Council will minimise the impact of current and future mine water pollution.
- NWL Ltd suggested that a policy solely focused on flood risk should be included.
- In terms of the provision of public art, 'offsetting' should be allowed so that the art feature can be provided in places which are accessible by the public rather than on industrial estates.

Policy SD5 Developer Contributions

2.12 This policy attracted 13 comments.

- There was a general support for the policy
- The policy should be amended to make it clear that developer contributions will only be sought where they meet the three tests set out in the NPPF and CIL Regulations.
- The Environment Agency advise that mitigation measures for creating a healthy water environment and habitat creation should be sought.
- Sport England request that developer contributions be used to fund sports facilities.

Policy SD6 Renewable Energy

2.13 This policy attracted 14 comments.

- The National Trust supported the policy.
- Natural England and RSPB requested changes to ensure that the policy provided sufficient protection for European Protected sites.
- The Tees Valley Nature Partnership and Tees Valley Biodiversity Trust requested the inclusion of species protection within the policy.
- Two comments expressed disappointment that the policy did not set minimum separation distances surrounding wind turbines.
- Banks Renewables Ltd. objected to the policy stating that it failed to reflect the NPPF presumption in favour of sustainable development. Requested that the policy includes the findings of the Tees Valley Wind Capacity Study.
- It was commented that the policy should encourage district heating and that priority should be given to development that has a direct benefit for local communities.
- Durham Tees Valley Airport requested the addition of wording to the policy to ensure that proposals do not impact on the safe operation of the airport.

- It was commented that the policy had no agreed strategy for windfarm development.
- The North York Moors National Park suggested wording to improve protection of the setting of the Park and requested that impact on recreation was included as a consideration within the policy.

Chapter 3 Local Spatial Strategies

2.14 We received 1 comment relating to this section.

- English Heritage indicate that local plans should include strategic policies to conserve and enhance the historic environment. The policies should be clearly strategic so they cannot be overridden by a neighbourhood plan.

Policy LSI Greater Eston Spatial Strategy

2.15 This policy attracted 9 comments.

- Include Asda's South Bank store as part of the district centre within the retail hierarchy.
- The Great Park should be restored.
- There is a shortage of care homes in the area.
- Concern over the reliance of housing coming forward on Low Grange Farm.
- Natural England advised to recognise the potential contribution made by setting to the significant heritage assets.

Policy LS2 Redcar Area Spatial Strategy

2.16 This policy attracted 139 comments.

- There was a request to include support for a new pier in Redcar.
- The green wedge between Redcar and Marske should be maintained.
- English Heritage advise that policy should safeguard all heritage assets, not just Kirkleatham Village.
- More parking should be provided.
- Marske should not be included with the conurbation and therefore should not be in the Redcar Sub Area.
- Object to development south of Marske.
- The Redcar House project needs further explanation.

Policy LS3 Rural Communities Spatial Strategy

2.17 This policy attracted 14 comments.

- More development should be allocated in the villages in East Cleveland, including Saltburn.
- Guisborough should be recognised for its role in the provision of new housing.
- There is a requirement for a new community hall at the top end of the Town, potentially on the Kiltondale Home site. The site could also provide a MUGA for all weather activities.

- Natural England advise that there is need to recognise the potential contribution made by setting to the significant heritage assets.
- The Highways Agency advise that confirmation is required that the level of proposed growth can be delivered without detrimentally impacting on the highway network.
- The green infrastructure links need further explanation.
- The Tees Valley Nature Partnership advise that the policy should recognise the wider green infrastructure links between Nunthrope and East Cleveland.

Policy LS4 South Tees Spatial Strategy

2.18 This policy attracted 7 comments.

- Natural England advise that the policy should protect all heritage assets in the area.
- TVU request that the importance of other industries be recognised.
- TVU request that reference is made to the South Tees District Heating Scheme.
- The Highways Agency advise that confirmation is required that the level of proposed growth can be delivered without detrimentally impacting on the highway network.

Policy REG1 Coatham

2.19 This policy attracted 8 comments.

- Tees Valley Unlimited support the policy as it would help improve the retail and visitor economy.
- Disappointing that the Coatham Masterplan has not yet been published despite being prepared since 2011.
- Natural England and the RSPB are concerned about the potential impacts upon the Teesmouth and Cleveland Coast SPA. The Environment Agency's Shoreline Management Plan recommended a transition area between the development and the SPA, but this has not been included in the HRA assessment.
- Further clarification is needed on potential impacts between economic development and impacts on the SPA. Otherwise the masterplan could be jeopardised by minor adverse impacts which could be mitigated against.
- Environment Agency advise that part of the site is in flood zone 3. The Local Plan should steer development away from areas most at risk of flooding. Development in the flood zone would need to be supported by a Flood Risk Assessment and the sequential and exception tests would also need to be passed.

Policy REG2 Kirkleatham

2.20 This policy attracted 8 comments.

- Concern about Kirkleatham Old Hall Museum being sold to the private sector as a hotel. There is already a museum in the town centre and no need for another one.

- English Heritage support the detailed and positive commitment to the conservation area. The potential impacts of the policy on Coatham Conservation Area need to be considered. Suggested wording improvements have been put forward.
- The policy should indicate that Kirkleatham Conservation Area is of outstanding significance. Several interventions in recent years have shown areas of high archaeological potential.
- York Potash indicate that their proposed pipeline would be located within this area, but they are confident that it would not harm the heritage assets at Kirkleatham, or the policy proposals.
- Tees Valley Wildlife Trust indicate that the policy needs to include reference to the requirements of protected species as some of the properties are known to be used as bats and barn owls.
- HSE indicate that part of the site would be within the HSE's consultation zones. The extent and compatibility of any development should be considered within this context.
- Environment Agency advise that this site drains to a watercourse which is culverted through Redcar to Coatham Marsh. The policy should make reference to protecting and restoring the natural environment including restoring watercourses and deculverting. Part of the site was formerly used for landfill. The surrender of the site was formerly accepted following an assessment of the environmental risk, including landfill gas.

Policy REG3 Skelton

2.21 This policy attracted 6 comments.

- Highways Agency are generally supportive of the policy. The potential impact of the proposals on the Strategic Road Network should be considered through the Model Assessment Report.
- Environment Agency support reference to SuDS, however to not believe that the culvert connects to the water treatment plant.
- Concerns over permitting bulky goods retail on the site as this could impact on Rectory Lane, Guisborough and Teesside Shopping Park. It may also harm accessibility to the remainder of the site for industrial use.
- ASDA would like to see their new store and surrounding area designated as a district centre.
- Concerns over the types of businesses which might be located on the site and potential impacts on the High Street businesses.
- More residential development will result in more pollution.
- There is no mention of Skelton Green. The village has lost facilities over the years, but could not support new businesses. The street lighting needs to be improved.

Policy EDI Protecting and Enhancing the Borough's Centres

2.22 This policy attracted 21 comments.

- General support for the policy

- Highways Agency suggest that if a low threshold was introduced for sequential assessments that they would expect that proposals should still be sustainably accessible.
- West Midlands Pension Fund disagree with the proposed local thresholds for impact assessments.
- English Heritage suggests the policy supports the reuse of buildings, particularly those of heritage value and at risk.
- Concern over the impact of Low Grange District Centre on Eston District Centre.
- Several objections over the inclusion of the eastern end of Redcar High Street in the town centre boundary. This has a high proportion of residential properties and the high number of takeaways and drinking establishments causes litter, noise, disturbance and parking problems.
- Lady Hewley Trust would like Low Grange Centre boundary extended to include some of their land.
- For Marske area the plan relies on leisure and tourist development, which along with Longbeck Trading Estate would not provide enough jobs for the new housing proposed.
- Objection to Loftus District Centre being reduced in size.
- Policy should make clear that a sequential assessment would not be required for proposals in accordance with an adopted plan.
- Improvements should be made to Brotton Local Centre. The Old Station Yard site offers an opportunity to do this.
- Every effort should be made to consolidate all district centres and return vacant units to residential use.
- Would like to see a Christmas market in Redcar.
- Royal Mail would not like to see any proposals adjacent to their South Bank sorting office that would affect their operations.
- ASDA would like their Skelton and South Bank stores to be included within a district centre designation, or if not, they should be protected under Policy ED1 and shown on the proposals map.
- Redcar shopping experience needs to be improved, with more focus on the High Street and not just the sea front.
- Small businesses should be encouraged in all the local centres and not threatened by out of centre supermarkets.

Policy ED2 Cleveland Retail Park

2.23 This policy attracted 2 comments.

- Middlesbrough Borough Council would like the policy to make reference to protecting centres in their borough too.
- Highways Agency support the policy. Where significant development is proposed, the impacts on the Strategic Road Network should be considered and the Agency consulted at an early stage.

Policy ED3 Hot Food Takeaways

2.24 This policy attracted 6 comments.

- General support for the policy.
- One objection to the policy on the grounds that the policy would hamper economic growth as the 5% threshold is set too low and the policy has not been prepared positively in accordance with the NPPF. Each case should be treated on its own merits.
- Concerns over car parking in Zone H as visitor permits are being used by businesses.

Policy ED4 Retail Development on Industrial Estates and Business Parks

2.25 This policy attracted 2 comments.

- General support for the policy.
- Highways Agency any proposals should consider potential impacts on the strategic road network and the Highways Agency should be consulted at an early stage where impacts have been identified.

Policy ED5 Advertisements

2.26 This policy attracted 3 comments.

- Natural England indicate that illuminated adverts can have an adverse impact upon protected species and the policy should be amended to take account of this.
- The policy needs to be backed by adequate enforcement. As with all policies in the plan, the enforcement section should be highlighted in the Local Plan.

Policy ED6 Protecting Employment Areas

2.27 This policy attracted 13 comments.

- Some support for the policy.
- Forewind Ltd support the protection of the Green Wedge between Redcar and Marske and restoration landscape designation to the south of the A174, which would not affect their proposed onshore operations.
- Would like there to be more emphasis on attracting industries to the area, especially East Cleveland.
- RSPB have concerns over the potential impacts of the employment allocations on the Teesmouth and Cleveland Coast SPA. Development up to the boundary of the SPA is unlikely to satisfy the HRA.
- Lack of thinking over economic strategy. No mention of high tech and niche industries. Traditional large industries are in decline. The notion of creative industries in Redcar has already failed.
- York Potash support the safeguarding of 343ha of employment land, however this should include logistics for consistency with Policy LS4. Express concern that the restriction to chemical and energy related uses at Wilton International may not support their proposed drying and dewatering facility.
- Highways Agency would like information provided on the quantum of development expected on each site, in order to assess potential impacts on the strategic road network.

- The plan should restrict abattoirs to employment sites and ensure they are not located close to existing or future housing.
- The plan should recognise the existing allocation for industrial land at Liverton Mines.
- The plan should recognise creative industries at Saltburn.
- Royal Mail would like sufficient protection to be added into the policy to protect the operation of their Guisborough and Redcar delivery offices from non compatible uses nearby.
- Environment Agency would like to see the proposed Eco Park encouraged for green industries and recyclers with high environmental standards. New industries are encouraged to use Best Available Technology to design out waste from processes as much as possible.
- Environment Agency support the Enterprise Zone and its focus on low carbon industries.
- Environment Agency believe that the policy is too narrowly focused on local and visual impacts and should be widened to include improvements to land, water and habitats.
- The employment allocations don't appear to be shown on a proposals map.

Policy ED7 New Employment Allocations

2.28 This policy attracted 3 comments.

- Sport England disagree with the Council's view on the loss of playing pitches. The excess of adult and mini pitches in the area needs to be balanced against the shortfalls in junior football, cricket and rugby pitches in the Greater Eston area.
- Highways Agency indicate that the impacts of the proposed allocation on the strategic road network need to be considered.
- Natural England support the reuse of land for development and note that a playing field would be lost.

Policy ED8 Rural Economy

2.29 This policy attracted 3 comments.

- General support for the policy.
- Tees Valley Unlimited support the policy, in particular reference to the leisure and tourism economy and expansion of the broadband network which is consistent with the Strategic Economic Plan. Would like to see more emphasis on what is special about the rural area and how its assets can be managed to support growth.

Policy ED9 Leisure and Tourism Development

2.30 This policy attracted 14 comments.

- General support for the policy.
- RSPB have concerns over the potential impact of leisure and tourism development at Coatham on the Teesmouth and Cleveland Coast SPA. The Recreation Management Plan should identify if potential impacts could be

adequately mitigated. Natural England also have concerns over the potential impact on the SPA.

- West Midlands Pension Fund would like reference to be included to leisure and tourism potential at Marske and in particular south of Marske.
- Financial viability should not be the only reason why tourist accommodation can be lost. Some existing accommodation is poor quality through years of decline and bad management. The policy should also allow for losses of accommodation where there is a detrimental impact upon the local environment and amenity of an area.
- English Heritage believe that development should seek to capitalise on heritage assets more generally, not just at Kirkleatham.
- National Trust support reference to Natura 2000 sites in the policy but would like reference to other policies and designations to be included in the policy.
- Environment Agency indicate that the borough's watercourses provide the opportunity to link inland and coastal tourism.
- It is vital that the plan aligns with the business and development plans of the North York Moors National Park who are a key partner.
- To promote tourism in rural areas, they need to be kept attractive. Wind turbines and other development threatens this. Wind turbines should be restricted to the industrial landscapes.
- More emphasis should be placed on the Cleveland Way National Trail, which is one of only 15 in the country. Reference should also be made to the English Coastal Path and the 'alternative coast to coast'.
- Only supporting hotel development in Redcar and Saltburn represents an old-fashioned view of tourism.

Policy ED10 Caravan Sites and Tourist Accommodation

2.31 This policy attracted 4 comments.

- Natural England would like reference to potential impacts upon protected sites to be included in the policy.
- The National Trust support reference to Natura 2000 sites, but would be useful if the policy could cross reference to other policies in the plan regarding the natural environment. Would also support protection of other designated sites which may not be Natura 2000 sites.
- Environment Agency express concerns over the potential impacts of sewerage from caravan sites on watercourses. Policy should be amended to encourage coastal sites to connect to existing sewer network, where possible. Where this is not possible, an Environmental Permit will be required. Sites should not be located in areas at risk of flooding.

Policy ED11 New Hotel and Guest House Accommodation

2.32 This policy attracted 6 comments.

- Hotel accommodation should be allowed in areas other than Redcar and Saltburn. This is contradictory to requiring a sequential assessment.
- English Heritage indicate that development should not harm to the significance of any heritage assets.

- Natural England express concerns over potential impacts on Natura 2000 sites resulting from an increase in visitor numbers. If the option for focusing the policy on particular areas is adopted, it could specifically address the local designated sites and environmental concerns.
- Good hotel accommodation is not necessarily related to tourism. There is a lack of good hotel accommodation in the whole area.

Policy ED12 Equestrian Development

2.33 This policy attracted 3 comments.

- English Heritage express concerns that the policy remains silent on proposals for changes of use which could mar the character and appearance of otherwise attractive agricultural land.
- Environment Agency recommend the policy is amended to ensure appropriate manure storage and dirty water handling facilities, in order to protect the cleanliness of watercourses.

Policy HI Housing Requirement and Delivery Phasing

2.34 This policy attracted 39 comments.

- North York Moors NPA support the proposed level of housing.
- Support for mix of housing.
- Highways Agency does not object to overall approach of overallocating housing land provision to support delivery provided supporting evidence is robust.
- The requirement and strategy to reverse population decline is too optimistic as movement in Redcar & Cleveland is constrained by physical barriers.
- Greenfield housing allocations should be removed as they are detrimental to the attractiveness of the borough.
- Object to policy as it inconsistent with NPPF because it does not provide sufficient allocations to significantly boost housing supply, it does not meet objectively assessed needs over the plan period and does not include an undersupply buffer over the first five years.
- The requirement is insufficiently aspirational and should be increased to align with Regional Strategy figure of 340 per annum which is realistically deliverable and more effectively supports the Council economic regeneration aspirations.
- The target should be increased to account for the historic performance backlog against Regional Strategy requirements.
- In line with NPPF, the figure should include a 20% buffer in the first 5 years.
- The strategy appears to assume that increasing the level of new housebuilding will halt net out-migration and attract incomers and new jobs, but this is not supported by sound evidence.
- The requirement is insufficiently aspirational and should be increased by 10% to include reserve sites to support deliverability.
- The requirement is too high relative to the demographic profile of the borough and contradicts the sustainability goals set out elsewhere in the plan.
- The policy lacks certainty in terms of the wording and the approach of identifying a minimum requirement supplemented by an unjustified buffer.

- Reliance on the 2011 CLG Interim Household Projections is inadequate as the figures do not cover the entire plan period and are based on trend-based projections which reflect the 2008-11 recession and as such are overly pessimistic.
- To facilitate a more flexible and deliverable supply site phasing should be abandoned and the requirement should be increased to guard against increased demolitions.
- The requirement is too high and not justified due to high unemployment and a declining population and economic base.
- There is an adequate supply of unsold properties on the market and some new builds are not selling.
- The strategy is flawed because population loss has accompanied economic decline and the situation will not change unless there is a significant increase in economic activity.
- There is no clear demonstration of cross-boundary working.
- Historic under-delivery will have curtailed household formation rates, therefore in order to achieve an objective assessment of needs the requirement should be increased by at least 50% to account for the backlog.
- The requirement is not founded on a robust evidence base and as such regard should be had to the RS figures which are. Increasing the target in line with RS targets will be achievable, realistic and aspirational provided sites in locations where people want to live are allocated for development.
- The plan seems to assume that building houses will encourage in-migration, but this will only happen if accompanied by job creation or people are attracted to a high quality environment.
- Due to established contraction of the local economic base, a more appropriate strategy would be to plan for managed decline with incomers attracted to a more rural atmosphere with lower density, executive housing.
- The increase in the requirement above the household growth projections is not justified in the supporting text.
- Assumptions on housing completions from 2014/15 on sites in Skelton and Saltburn are inaccurate.
- Major development proposed at Marske will exacerbate flood risk, spoil the character of the village and is unnecessary without commensurate employment growth.
- Overall approach to provide a continuous and flexible housing supply is supported but the figure is insufficiently aspirational and needs to be increased to reflect past under-performance and significantly boost the supply in accordance with the NPPF.
- Previous gross delivery rates indicate that there is significant scope to increase the net requirement.
- The Home Builders Federation supports the approach to set a housing requirement which exceeds household growth projections but contends that the figure should be increased in line with the Regional Strategy requirement in order to significantly boost supply in accordance with national policy, address historic under-delivery and more effectively align with the Council's economic regeneration aspirations. Based on past completion rates, the suggested target is realistically achievable.

- Tees Valley Unlimited supports the overall approach to increase housing supply, but the policy could be strengthened by having more regard to the economic benefits of housing development.
- Tees Valley Unlimited advises that the assumptions do not take fully into account the findings of the Tees Valley SHMA which could present problems at inquiry stage.
- Tees Valley Unlimited suggest that stipulating a 'minimum net requirement' and a 'gross target' could be confusing.
- There appears to be no allowance made for the replacement of older dwellings which are demolished over the plan period due to unfitness.
- Support the approach that the requirement is specified as a minimum and therefore not a ceiling.

Policy H2 Type and Mix of Housing

2.35 This policy attracted 12 comments.

- The plan needs to focus on the provision of market and affordable housing for young families rather than higher end detached and 'executive' dwellings and by encouraging small-scale development and property renovation and re-occupation in all localities.
- Too much emphasis is placed on the development of detached and 'executive' properties.
- The strategy to rebalance the population by attracting working-age households and developing larger detached dwellings is flawed without increasing employment levels and appears to be based on securing higher Council Tax revenues.
- Policy is broadly supported but the market should dictate appropriate housing type and mix.
- The scope for attracting executive type developments and high income households is limited due to declining employment prospects, falling population and poor quality environments and new developments.
- The plan establishes the need for affordable housing but this is contradicted by prioritising the development of executive-style housing which are not affordable to those younger households most in need.
- I suspect that there is a greater proportion of larger family homes on the market for sale than any other house type. These are mostly estate houses, similar to those proposed in the plans. The current mix of housing is unbalanced, and future housing plans seem to further exaggerate the imbalance.
- Para. 6.25 on appropriate housing densities and site location is at odds with the proposals for the strategic site at Marske Inn Farm.
- Tees Valley Unlimited welcomes recognition that a healthy local economy requires an appropriate mix of housing, in particular the role executive housing plays in retaining and attracting high earners. Would like to see definition of executive housing expanded to include a reference to penthouse apartments, particularly those arising from conversions of larger older buildings.
- Tees Valley Unlimited suggests plan should make reference to how Redcar and Cleveland will cater for the significant increase in older (over-65) residents.

Policy H3 Housing Allocations

2.36 This policy attracted 44 comments.

- Site promoter supports inclusion of Marske Inn Farm as a housing allocation.
- Support for protection of Guisborough Rugby Club site under open space policies and rejection as housing allocation.
- Site promoter supports inclusion of Land West of Pine Hills as a housing allocation.
- Site at Old Saw Mill, Kirkleatham presented for consideration as a housing site.
- Strategy should focus on small brownfield sites within existing built-up areas rather than large greenfield allocations.
- English Heritage considers that insufficient regard has been had to heritage assessment in identifying housing allocations.
- Objection to allocations in Nunthorpe and Ormesby due to the cumulative adverse impact which developments will have on traffic congestion and community infrastructure provision such as schools, healthcare and local shops and because the Swan's Corner proposal will remove all possibility of by-pass which is badly needed to alleviate current congestion.
- Rejected sites at Coach Road Brotton should be included as allocations.
- The strategy should be abandoned as too much emphasis has been placed on allocating greenfield land which has negative implications for quality of life, the environment, highways and traffic management and flood risk and because the level of development proposed is not justified as the population is falling.
- Not all housing land allocations have been subject to an ecological assessment which is contrary to UK and EU wildlife law and could undermine plan progression.
- Site at Empire Garage, Boosbeck presented for consideration as a housing site.
- Question consistency of strategy in terms of prioritising previously sites with the level of development proposed on greenfield
- Rejected site at Highfields, Brotton should be included as allocation.
- Question why Coatham Enclosure site has not been included as housing allocation.
- That plan proposes too much development on greenfield land which is contrary to the stated aims of preventing urban sprawl and reducing CO² emissions.
- Improvements to sewerage disposal and surface water drainage management should be undertaken prior to development. Greenfield developments in Redcar have increased further pressure on the existing systems which have insufficient coping capacity.
- Developments in Redcar should be put on hold until an effective surface water management system is established.
- The large strategic site at Marske Inn Farm is disproportionate to meeting housing needs in Marske and the borough in general.
- Site at Boosbeck Road, Boosbeck presented for consideration as a housing allocation.
- Sites at Galley Hill Farm, Guisborough presented for consideration as housing allocations.

- Sites at High Farm, Teesville presented for consideration as housing allocations.
- Land north of Meadowcroft Road, Normanby presented for consideration as executive housing allocation.
- Housing requirement should be increased based on RS figures.
- Rejected site at Woodcock Wood, Normanby should be included as allocation.
- Rejected site at Cleveland Gate should be included as regeneration site for mixed use commercial and residential scheme or, failing that, purely as a housing allocation.
- Rejected site at Hewley Reservoir, Normanby should be included as allocation.
- Some development should take place at Skelton Green, at Cleveland View.
- Rejected site at Morton Carr Farm, Nunthorpe should be included as allocation.
- No further development should be allowed at Guisborough until the impact of existing residential permissions has been assessed and any further allocations should focus on affordable housing including bungalows on sites in sustainable locations close to the town centre.
- Rejected site on Land East of Mickle Dales, Redcar should be included as allocation.
- Rejected site at Marske Mill Farm, Saltburn should be included as allocation.
- Rejected site at Sparrow Park Farm, New Marske should be included as allocation.
- Objects to plan as it is silent on future use of former Sacred Heart / St Dominic's site at Redcar.
- Object to policy as it inconsistent with NPPF because it does not provide sufficient allocations to significantly boost housing supply, it does not meet objectively assessed needs over the plan period and does not include an undersupply buffer over the first five years.
- Insufficient sites have been allocated to meet the proposed target.
- The proposed over-allocation should be increased by a further 10% to ensure housing delivery.
- Objects to any development at Windy Hill Farm (a rejected site) as it would place increased capacity on drainage, sewerage and highways infrastructure and would promote coalescence between Marske and Saltburn.
- Requirement should be increased by 300 to allow for contributions on small windfall sites.
- Site promoter supports inclusion of St.Hilda's site but delivery should be brought forward into first delivery phase to support targets.
- Middlesbrough Council advise that the joint authority Arup Model Assessment Report identifies that the proposed allocations in Nunthorpe and Ormesby and at Guisborough Road in the Middlesbrough Council area will create congestion at Swan's Corner junction and further collaborative work is required to explore capacity improvement solutions.
- Policy could be strengthened by incorporating housing allocations.
- Highways Agency advises that it will consider potential impact of allocations on strategic road network, taking into account the supporting evidence base.
- Natural England advise that the Habitats Regulation Assessment highlights the need to address the indirect impacts of development on habitat

- Tees Valley Unlimited supports the spatial balance of housing allocations on sustainability grounds.
- RSPB advises that screening exercise to determine the need for Appropriate Assessment should also apply to sites over 5km from a Natura 2000 site.

Policy H3.1 Marske Inn Farm Strategic Site

2.37 This policy attracted 614 comments.

- High number of objections to the proposals.
- West Midlands Pension Fund support the policy.
- No need for additional housing. There are already lots of properties for sale.
- Plan is focused on executive housing. People cannot afford executive housing and it is small less expensive housing that is needed.
- No need for any more affordable housing.
- The area has a high unemployment rate. There are no jobs and therefore people cannot afford to buy these new houses. New jobs should be created first before houses are built.
- The plan is based on a flawed economic premise that if you build the houses the jobs will come. It should be the other way round, provide the jobs first and then the houses after.
- Impact of development on Local Infrastructure.
- Concerns over flooding/surface water drainage.
- The site is outside of development limits.
- Questions whether development limits around Marske already been extended to include the site.
- There is no need for a hotel/drive thru restaurant/ pub/petrol filling station.
- Don't want four storey buildings.
- Traffic/Congestion concerns
- Objections to narrowing the road under the railway bridge to a single carriageway.
- Loss of village character/identity.
- Housing should be built on brownfield sites, not greenfield land.
- Loss of/damage to the strategic gap between Marske and New Marske.
- The proposals would result in the merging of Redcar, Marske, New Marske and Saltburn.
- Object to housing development on land at Windy Hill Lane.
- Marske should not be included in the conurbation.
- High density housing is not appropriate in Marske.
- Impact of the proposals on local schools. Not enough school places.
- Concerned that the Council is seeking a financial contribution for off-site education proposals and that the new school originally proposed has not been included in the planning application.
- Reduction in property value.
- There is no need for a park and ride facility.
- Community consultation on proposals by West Midlands Pension Fund was inadequate.
- Phasing of development is over too long a time period. It should be quicker to limit disturbance and impact upon the community.

- Loss of good quality agricultural land.
- The existing water treatment works are not adequate enough to cope with additional development.
- Sewerage system is inadequate.
- Concerned over demolition of school buildings in Marske with no replacements being provided.
- Impact on the natural environment.
- Loss of green space.
- The plan makes no mention of the need to support high tech or niche industry.
- Impact on quality of life.
- The proposals would not be sustainable. The site is not located close to jobs and very few jobs would be created by the proposed development.
- English Heritage indicate that there is a need for an appropriate evaluation of the potential impact of the allocation on the significance of the scheduled ancient monument before consideration can be given to whether public benefits would clearly outweigh any harm. English Heritage advise that separation between the monument and the proposed development would be harmful and undesirable. If it can be satisfactorily established that development can proceed without any unnecessary loss of heritage significance, efforts should be made to integrate the monument, perhaps through limited access and interpretation, thereby giving 'ownership' and sympathetic usage of it to the local community.
- North East Archaeological Research Ltd (Neil Cookson) indicate that more information needs to be provided about the archaeological requirements at the site. It is likely that there will be remains beyond the boundary of the scheduled monument to the west and this needs prior evaluation. It is important that the monument is included as an integral part of the site at the design stage and that the long-term maintenance and presentation of the site is secured as part of the proposals.
- Natural England note that the site is within 3.4km of the SPA/Ramsar site. Although the site is well served by transport, it is adjacent to the A174 and is likely to increase reliance on the private car.
- Highways Agency indicate that they have been consulted on the proposals as part of the planning application and although having an impact on the strategic road network, this could be accommodated within existing capacity.
- The development would be disproportionate to the size of the settlement.
- Impact on biodiversity and geodiversity.
- The plan seems to offer safeguards against the proposed housing developments threatening Marske notably (R/2013/0669/OOM), yet these do not prevent the application being considered.
- The plan is undemocratic as it was passed on one vote. Some of the Councillor's don't live in the borough.
- The Council's consultation was inadequate. No publicity regarding the proposals. Limited number of consultation events. Website difficult to navigate.
- Increased pollution as a result of traffic congestion.
- The development is not for a new community as it is not separate to Marske.
- Potential impact on bathing water quality due to water storage tanks discharging onto the beach. Existing storage tanks at the Stray have already discharged much more regularly than they are supposed to.

- Loss of views.
- Increased traffic will make it impossible to park outside of own house.
- Hot food takeaway would result in additional impact on the NHS.
- The loss of green belt.
- Concerned that the houses would be used to re-house people from other areas.
- There is not enough parking in Marske and extra housing will make this situation worse.
- Loss of privacy.
- The plan is premature as it allocates this as housing land, prejudicing in favour of the planning application before it is determined.
- The railway line is a defensible boundary to the village.
- Development is close to a Scheduled Ancient Monument.
- Impact of proposed commercial development on existing businesses within Marske District Centre.
- Inadequate pedestrian access from the proposed development to existing amenities within Marske.
- Impact on landscape.
- Policy would overturn decisions on previous plans not to include the site as a development allocation.
- The site should not have been included in the plan without a full enquiry into its necessity.
- Impact on tourism in Marske. Will make the village less attractive.
- Impact on conservation area.
- The area of land between the coast and Errington Woods should be a sensitive landscape area.
- Marske does not receive the same level of investment as other areas of the borough.
- There is a need for a new bus shelter at the end of Hummershill Lane.
- No need for a further 70 offshore wind turbines between Redcar and Marske.
- Soon there will be no open spaces left for future generations.
- England & Lyle acting on behalf of private clients object to proposed allocation as they consider that Marske should not be part of the conurbation. They suggest that their clients site at Woodcock Wood should be allocated instead.

Policy H3.2 Low Grange Strategic Site

2.38 This policy attracted 5 comments.

- Questions whether the indicative delivery rate can realistically be achieved; a lower figure is suggested.
- Suggested changes to site boundary and text correction in regard to access.
- Environment Agency advise that policy should be amended to reflect historic landfill operations on part of site and need for risk assessment and encouragement should be given to de-culverting of local watercourses in dealing with surface water drainage issues.

- Highways Agency advise that off-site, strategic road network implications and any require measures should be identified before planning application stage.
- HSE confirms that allocation could encroach upon outer HSE consultation zone and that H3 housing development would be compatible use within the outer zone.

Policy H3.3 Swan's Corner, Nunthorpe

2.39 This policy attracted 118 comments.

- Mostly objections from local residents.
- Impact on traffic congestion (of this site and others nearby), is highlighted as a major concern and reason for objection from many respondents.
- Impact on traffic safety.
- Concern about flooding and drainage problems on the site and the increased off-site flood-risk implications posed by building on it.
- Opposed to loss of greenfield land and open space.
- Priority should be given to providing housing in more affordable locations.
- Loss of view towards hills.
- Loss of wildlife / birdlife on the site and in the wider local area due to development.
- Priority should be given to developing 'brownfield' sites.
- Over-development will remove rural feel of the area.
- Inadequate local services, including school places to support more development.
- Inadequate open spaces and leisure facilities to support more development.
- There is insufficient local green space.
- Inadequate parking to service more development.
- Object because the opportunity to provide a new route into Middlesbrough will be lost and should be reconsidered.
- Impact on heritage assets at Upsall Hall has not been considered.
- Development will add to noise and air pollution.
- Development will remove separation between Nunthorpe and Ormesby.
- Loss of wildlife corridor.
- There is no need for further housing in the local area.
- Highways Agency advise that off-site, strategic road network implications and any require measures should be identified before planning application stage.
- English Heritage object due to absence of heritage assessment.

Policy H3.4 Gypsy Lane, Nunthorpe

2.40 This policy attracted 94 comments.

- Mostly objections from local residents.
- Impact on traffic congestion (of this site and others nearby), is highlighted as a major concern and reason for objection from many respondents.
- Impact on traffic safety.
- Loss of good agricultural land.
- Priority should be given to developing 'brownfield' sites.

- Loss of wildlife / birdlife.
- Object due to access difficulties and density which is too high.
- Loss of view to north
- Loss of footpath towards Ormesby Bank and Ormesby Hall.
- Loss of green space.
- Access gate will still need to be used by farmer.
- Queries why new housing is needed given vacant property levels.
- Local services and infrastructure are inadequate to cope with the level of development proposed in the Nunthorpe area.
- Will exacerbate flooding and drainage problems.
- Development will encourage further proposals to develop on open fields nearby.
- Over-development will remove rural feel of the area.
- Highways Agency advise that while proposed development should not in itself present major problems for strategic road network, site needs to be considered within the wider impact assessment.
- English Heritage object due to absence of heritage assessment.

Policy H3.5 Morton Carr Lane, Nunthorpe

2.41 This policy attracted 60 comments.

- Mostly objections from local residents.
- Impact on traffic congestion (of this site and others nearby), is highlighted as a major concern and reason for objection from many respondents.
- Priority should be given to developing 'brownfield' sites.
- Loss of wildlife and biodiversity.
- Loss of amenity area for dog walkers.
- There is already an oversupply of housing.
- Site has drainage problems.
- Local services and infrastructure are inadequate to cope with further development.
- Public consultation with local residents and notice given has been inadequate.
- Impact on traffic safety.
- Object to development on greenfield land.
- Highways Agency advise that while proposed development should not in itself present major problems for strategic road network, site needs to be considered within the wider impact assessment.

Policy H3.6 Longbank Farm, Ormesby

2.42 This policy attracted 138 comments.

- Impact on traffic congestion (of this site and others nearby), is highlighted as a major concern and reason for objection from many respondents.
- Traffic safety.
- Loss of wildlife and biodiversity.
- Object to development on greenfield land.
- Loss of green link to Eston Hills.

- Object to access from existing estate roads.
- Previous planning application was rejected due to limited traffic handling capacity of existing estate roads.
- Site is steeply sloping and development could exacerbate flood risk and drainage problems.
- The housing requirement cannot be justified as the population is falling.
- 'Brownfield' rather than 'greenfield' sites should be developed.
- Unacceptable impact on the landscape.
- Essential water and sewerage infrastructure crosses the site.
- If development is allowed, should be at a lower density and respect the residential character of the adjacent area, including the significant provision of bungalows and should incorporate green buffers along the northern and western boundaries to maintain wayleaves for the water and sewer infrastructure.
- Loss of green space.
- Loss of privacy.
- Increased environmental pollution.
- Accessibility constraints.
- Limited capacity of local schools to meet the additional need for places.
- Location of proposed access road adjacent to existing properties would have negative quality of life outcomes for nearby residents due to increased environmental pollution and loss of privacy.
- Inadequate consultation and information including online maps.
- Site is outside development limits.
- Limited capacity of local health services and sustainable transport provision to access healthcare.
- Land stability concerns of developing on sloping site in former mineworking area, including impact on structural soundness of existing properties.
- Questionable demand for housing given current local economic situation.
- Impact on landscape.
- Poor public service provision in Ormesby, including facilities for children and youths.
- Overlooking of existing properties.
- Encroachment on woodland and countryside.
- Deliverability concerns due to skyline location and awkward configuration, bearing in mind the Council's policy aspirations set out in the plan.
- Impact on house values.
- Loss of daylight to existing properties, including though the development of single-storey dwellings.
- Loss of view.

Policy H3.7 Spencerbeck Farm, Ormesby

2.43 This policy attracted 4 comments.

- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.
- Object to housing on greenfield sites in Nunthorpe and Ormesby.

- There are not enough local green spaces left for people to enjoy.
- Increased congestion.
- Lack of parking and doctors surgeries.
- The landowner would like additional land to the south to be included as part of the allocation.

Policy H3.8 Normanby Hall

2.44 This policy attracted 7 comments.

- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.
- Concerns over increase in traffic.
- Object if access would be via Cricket Lane or other sites.
- Hope the Council will be sympathetic to the need to protect the hall, but without swamping the site with too many houses.
- Object to the increase in houses from 20 to 25.
- Concerned about environmental impacts.
- Object to impact of proposals on listed building and its setting.
- England & Lyle (on behalf of private clients) support the inclusion of the site. Extensive marketing of the site has shown that there are no viable alternatives to the proposals. The proposed development would secure the future of the listed building. An archaeological assessment and detailed assessment of the trees has already been undertaken.
- English Heritage are not satisfied that an assessment of potential impacts on the significance of heritage assets has been undertaken, or whether the public benefits of the proposals have been considered against any impacts.

Policy H3.9 Former Redcar & Cleveland Town Hall and surplus adjacent land

2.45 This policy attracted 1 comment.

- Highways Agency indicate that including the proposals in the model assessment report will assist in identifying the implications of development proposals on the strategic road network.

Policy H3.10 Former Redcar Adult Education Centre

2.46 This policy attracted 2 comments.

- Highways Agency indicate that including the proposals in the model assessment report will assist in identifying the implications of development proposals on the strategic road network.
- English Heritage indicate that it is not clear if any assessment has been done to assess of the impact of the proposals on the significance of Coatham Conservation Area or Grade II* Listed Red Barns, or whether any harm would be outweighed by public benefits.

Policy H3.11 St. Hilda's Church, Redcar

2.47 This policy attracted 13 comments.

- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.
- Several objections to housing on greenfield sites in Redcar and Marske.
- Concerns that loss of greenfield sites will set a precedent which would make it difficult to resist development on others in the future.
- Concerns over traffic.
- No green space has been provided as part of housing at Newcomen School. This site should therefore be kept as open space to offset that loss.
- No need for more housing. Do not have the infrastructure to support what we have now.

Policy H3.12 Bylands Close, Redcar

2.48 This policy attracted 1 comment.

- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.

Policy H3.13 Connexions Campus (South), Redcar

2.49 This section attracted 11 comments.

- Several objections to housing on greenfield sites in Redcar and Marske.
- Concerns that loss of greenfield sites will set a precedent which would make it difficult to resist development on others in the future.
- Concerns over traffic.
- Development would be located too close to the road. Grass verges and front gardens make for a better quality of life.
- Concerns over high density development.
- Redcar will become overcrowded.
- Redcar & Cleveland College indicate that the site may be available earlier than the phasing suggests. The site should have its own access, so that it can be developed independently of Wheatlands Chase. The housing mix will be determined by the college and the developer based on their own assessments. There is an overprovision of recreation space in this area, so any on-site provision will need to be considered within a wider context. It is understood that the Miller housing site has provided adequate drainage for the whole site, including this allocation. The level of financial contributions will be informed by the college and developers viability assessments.
- Sport England object. The site is wholly playing field. The playing pitch strategy shows a shortfall of junior football, cricket and rugby pitches in Redcar.
- Highways Agency indicate that including the proposals in the model assessment report will assist in identifying the implications of development proposals on the strategic road network.

Policy H3.14 Land adjacent Rye Hills School, Redcar

2.50 This policy attracted 12 comments.

- Several objections to housing on greenfield sites in Redcar and Marske.
- Concerns that loss of greenfield sites will set a precedent which would make it difficult to resist development on others in the future.
- Concerns over traffic.
- Site was supposed to be used for a new gym.
- The Council's playing pitch strategy indicates that there is a shortfall of junior and mini pitches in the borough and advocates community use of school fields. The proposed loss of school fields would therefore be contrary to the Council's playing pitch strategy.
- Sport England are concerned that the Council has reneged on its promise to use the former school site as part of the school playing field.
- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.

Policy H3.15 Land adjacent Newcomen School, Redcar

2.51 This policy attracted 4 comments.

- Object to housing on greenfield sites in Redcar and Marske.
- Sport England did not object to the redevelopment of the school on the basis that as conditions secured the reprovision of the playing field and community use of the site. Concerned that the community use agreement has not been followed through and the allocation is greater than envisaged.
- Site should be removed as development has started.
- Development should not have been allowed whilst there continues to be a shortage of playing pitches.
- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.

Policy H3.16 Land adjacent Errington School, Marske

2.52 This policy attracted 4 comments.

- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.
- The Council's playing pitch strategy indicates that there is a shortfall of junior and mini pitches in the borough and advocates community use of school fields. The proposed loss of school fields would therefore be contrary to the Council's playing pitch strategy.
- There is no need for new housing in Marske.
- There is high unemployment and no jobs for new residents.
- The area is prone to flooding.
- Marske would lose its own distinctive character.
- Increased congestion.

- Increased primary and secondary school provision would be required.
- Greenfield and brownfield sites should remain as they are to protect the environment, agriculture and wildlife.

Policy H3.17 Wilton Lane, Guisborough

2.53 This policy attracted 2 comments.

- North York Moors National Park Authority indicate that the proposals would not have any adverse impact upon the setting of the national park.
- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.

Policy H3.18 Former Jackson's Field Allotments, Guisborough

2.54 The policy attracted 2 comments.

- North York Moors National Park Authority indicate that the proposals would not have any adverse impact upon the setting of the national park.
- Highways Agency indicate that including the proposals in the model assessment report will assist in identifying the implications of development proposals on the strategic road network.

Policy H3.19 Middlesbrough Road, Guisborough

2.55 The policy attracted 3 comments.

- North York Moors National Park Authority indicate that the proposals would not have any adverse impact upon the setting of the national park.
- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.
- Northumbrian Water would like the land to the north to be included as a housing allocation as a logical extension to the proposed allocation.

Policy H3.20 Former Chaloner Primary School, Guisborough

2.56 The policy attracted 2 comments.

- North York Moors National Park Authority indicate that the proposals would not have any adverse impact upon the setting of the national park.
- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.

Policy H3.21 Former Luke Senior House, Guisborough

2.57 The policy attracted 2 comments.

- North York Moors National Park Authority indicate that the proposals would not have any adverse impact upon the setting of the national park.
- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.

Policy H3.22 Enfield Chase, Guisborough

2.58 The policy attracted 2 comments.

- North York Moors National Park Authority indicate that the proposals would not have any adverse impact upon the setting of the national park.
- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.

Policy H3.23 West of Pine Hills, Guisborough

2.59 The policy attracted 7 comments.

- North York Moors National Park Authority indicate that the proposals would not have any adverse impact upon the setting of the national park.
- There is no need for several hundred more houses in Guisborough.
- The site would be visible for miles from the west.
- The houses would be too far from public services in the town centre.
- Increased pressure on local schools/services.
- Increase in traffic.
- The Council did not undertake sufficient consultation with the public. The documents were not available at Guisborough library.
- Make a legally binding agreement to retain King George V playing field.
- Bellway support the inclusion of the site, however disagree with the density, nature and quantum of the development proposed in the policy. The policy should be changed so that it is consistent with the planning application.
- Guisborough is a market town which is its strength, turning it into a major urban settlement would undermine this.
- There is already sufficient executive-style detached housing in Guisborough, there is a need for supported housing for older people which can be accommodated on infill sites.
- There is a lack of urban green space in the west of Guisborough, so building on another green field site does not make sense.
- Highways Agency indicate that including the proposals in the model assessment report will assist in identifying the implications of development proposals on the strategic road network.
- The density and phasing included in the policy are different to that of the planning application. Questions whether the Council can insist on the density and phasing proposed in the policy.

Policy H3.24 Galley Hill Farm, Guisborough

2.60 The policy attracted 3 comments.

- North York Moors National Park Authority indicate that the proposals would not have any adverse impact upon the setting of the national park.
- There is no need for several hundred more houses in Guisborough.
- The site would be visible for miles from the west.
- The houses would be too far from public services in the town centre.
- Increased pressure on local schools/services.
- Increase in traffic.
- The Council did not undertake sufficient consultation with the public. The documents were not available at Guisborough library.
- Make a legally binding agreement to retain King George V playing field.
- Highways Agency indicates that highways improvements should be planned up-front and not left to a planning application. The model assessment report will indicate whether the proposals are likely to have an impact on the strategic road network.

Policy H3.25 Whitby Avenue Field, Guisborough

2.61 The policy attracted 6 comments.

- North York Moors National Park Authority indicate that the proposals would not have any adverse impact upon the setting of the national park.
- Sport England concerned about the loss of playing fields, as there is a shortage of 8 sports pitches in Guisborough.
- English Heritage advise that the site is encircled by Guisborough Conservation Area and part of the site falls within it. There does not appear to have been any assessment of the impact of the proposals on the significance of heritage assets, or whether these impacts would be outweighed by public benefits.
- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.
- Environment Agency advise that part of the site is located within Flood Zone 3. Development should be directed away from areas prone to flooding and the plan should demonstrate that the sequential approach to growth has been undertaken. A Flood Risk Assessment would need to be undertaken alongside any application.
- Guisborough Estate support the inclusion of the site, however believe that the estimated yield should be raised to 54 dwellings and the site should be included in the first phase of development.

Policy H3.26 Church Hill, Skelton

2.62 The Policy attracted 1 comment.

- Highways Agency indicates that highways improvements should be planned up-front and not left to a planning application. The model assessment report will indicate whether the proposals are likely to have an impact on the strategic road network.

Policy H3.27 Home Farm, Skelton

2.63 The Policy attracted 3 comments.

- English Heritage have concerns over the policy. The site is adjacent to the Grade II* listed All Saints Church and the conservation area character appraisal indicates that the farm buildings are amongst the most important in the conservation area. It will therefore not be possible for the proposals to meet Policy HE1 (e). There does not appear to have been any assessment of the harm to the significance of the heritage assets as a result of the policy, or any consideration of whether the public benefit would outweigh the harm.
- Development of Home Farm should be speeded up.
- Public toilets should be provided.
- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.

Policy H3.28 Stanghow Road, Skelton

2.64 The Policy attracted 1 comment.

- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.

Policy H3.29 Former Saltburn Junior School

2.65 The Policy attracted 4 comments.

- The Council does not recognise the historic heritage of the area. This site should be developed along the same lines as Great Ayton School.
- English Heritage are concerned that there does not appear to have been any assessment of the potential impact on the significance of the Grade II Listed school building.
- Sport England indicate that the school grounds are being used as a playing pitch by Saltburn Juniors, due to the shortage of junior pitches within the town. Sport England would need to be satisfied that the shortage of junior pitches has been addressed to withdraw their objection.
- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.

Policy H3.30 Kilton Lane, Brotton

2.66 The Policy attracted 6 comments.

- Greenfield sites should not be used until all other sites have been exhausted.
- Any future development should include bungalows for the elderly.
- English Heritage indicate that a resolution of archaeological matters is yet to be reached on this site. Until the Council undertakes an assessment of the significance of the remains and the impact of the development upon that

significance it is not possible to have an understanding of whether the public benefits would outweigh the harm.

- Sight lines onto the bypass need improving, for vehicles coming from Skelton side of the roundabout.
- No need for new roundabout for entrance.
- Sewerage and drainage needs to be upgraded before development takes place.
- Need executive housing in Brotton.
- There is sufficient affordable housing already in Brotton.
- Should only be released in later phases on the plan as housebuilding still taking place.
- High street regeneration is needed, the Station Yard site offers the opportunity for retail development.
- Housing gain money should be used for a new community centre at the top end of Brotton.
- Old Kiltondale site would offer potential for building, car parking and a MUGA to cater for lack of leisure facilities.
- Taylor Wimpey would like the phasing to be brought forward. Given the suitability of the site and the lack of supply, there is no logical explanation to delay the phasing.
- No longer need for cemetery provision as the church have opened up their grounds for burials.
- Any housing gain should be spent in the area receiving the housing.
- Highways Agency advise that the model assessment report will indicate whether the proposals are likely to have an impact on the strategic road network.

Policy H3.31 Former Rosecroft School, Loftus

2.67 The Policy attracted 2 comments.

- Object to the proposals as the site would need to be accessed along a narrow lane and across a narrow railway bridge.
- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.

Policy H3.32 Hummersea Hills (Phase II), Loftus

2.68 The Policy attracted 3 comments.

- The policy says that Loftus district centre has a wide range of shops and services, this is not true.
- English Heritage indicate that it is not clear whether an assessment has been undertaken to assess the impact of the allocation on heritage assets, in particular Coatham Conservation Area.
- Highways Agency advise that the model assessment report will indicate whether the proposals are likely to have an impact on the strategic road network.

Policy H3.33 Cragg Hall Farm, Carlin How

2.69 The Policy attracted 3 comments.

- Some support for the policy, as it provides residents with the opportunity to stay in the village and purchase a new property.
- The site is unsuitable for housing. Existing flooding problems would be made worse.
- Highways Agency indicate that the proposals shouldn't have an adverse impact upon the highway network, however the site should be included within the evidence based assessments.

Policy H4 Affordable Housing

2.70 The Policy attracted 15 comments.

- Some support for the policy, particularly allowing flexibility for where viability is an issue.
- Objections to tenure requirements, as this may affect viability.
- Tees Valley Unlimited fully support the aims of the policy, however would like further clarification on what information would be required as part of a viability assessment and a rural exceptions policy to be included in the text.
- The Local Plan should also emphasise the continuing need to refurbish and modernise the existing social housing stock.
- Concerns over the viability of some large sites, as the viability study does not take account of the full costs of the plan.
- Policy should be more flexible to receiving off-site contributions towards existing housing stock.

Policy H5 Sub-division and Conversion of Buildings to Residential Uses

2.71 The Policy attracted 3 comments.

- English Heritage advised that the sub-division or conversion of buildings should not result in the unnecessary loss of heritage significance.
- The Highways Agency would welcome the consideration of transport implications of sub-division and conversion as part of the policy.

Policy H6 Houses in Multiple Occupation

2.72 The Policy attracted 2 comments.

- English Heritage advised that the sub-division or conversion of buildings should not result in the unnecessary loss of heritage significance.

Policy H7 Gypsy, Traveller and Travelling Showpeople Accommodation

2.73 The Policy attracted 3 comments.

- English Heritage indicate that development should not result in the unnecessary loss of any heritage significance.
- It is not clear if sites will include space for the keeping of livestock (horses etc). Would like information on how the Council would treat the keeping of livestock within the plan to avoid adverse issues associated (highways, trespass etc).

Chapter 7 Natural Environment

2.74 We received 2 comments relating to this section.

- English Heritage stated that it is important to recognise that many open spaces are designated heritage assets in their own right (e.g. registered parks and gardens), many are key to the character of conservation areas, and some are integral to designed views and vistas associated with large country houses.
- The RSPB support paragraphs 7.1 and 7.3. A strategic masterplan for the conservation and enhancement of biodiversity would help to achieve these aims and facilitate development and economic recovery within the borough.

Policy NI Landscape

2.75 The Policy attracted 23 comments.

- There was general support of the policy from a number of consultees including the RSPB, Natural England, The Natural Trust, The Tees Valley Wildlife Trust and the Tees Valley Nature Partnership
- A number of comments requested the designation of Beacon Moor as a Local Green Space.
- CPRE questioned why if the policy seeks to protect important landscapes, why we were promoting wind turbines on and around Eston Hills.
- It was requested that the coastline of Redcar, Marske and Saltburn and the area surrounding Marske should be designated as a Sensitive Landscape.
- York Potash Ltd. requested that the policy be updated to provide greater flexibility for development to be located in the Heritage Coast.
- The North York Moors National Park welcomed protection of the landscape setting and scenic beauty of the National Park but provided suggested amendments to strengthen the policy.
- The Woodland Trust welcomed the priority given to the planting of trees, woods and hedgerows and would welcome an indication of the how quantity and need would be calculated.

Policy N2 Green Infrastructure

2.76 The Policy attracted 25 comments.

- The policy was generally supported by the Tees Valley Wildlife Trust, Tees Valley Nature Partnership and the Woodland Trust.
- While there was support for the protection of strategic gaps, there were a number of objections that the proposed development at Marske Inn Farm would unacceptably reduce the strategic gap between Marske and New Marske and that this was in conflict with the policy.

- The National Trust supported the protection of green space around Ormesby Hall.
- Forewind Ltd. welcomed the protection of open space and green wedges between Redcar and Marske.
- West Midlands Metropolitan Authority Pension Fund support the policy.
- The policy does not include separation between Marske and Redcar which are separate communities.
- Great Park should be returned to its former quality.
- Concern was raised about the potential loss of green space at Eston Hills.
- Why develop on good agricultural land and green spaces when there is a good supply of brownfield land.
- Objection to the extent of the green wedge between Redcar and Marske; and between Middlesbrough and Eston/Ormesby/Normanby. The extent of these designations has not been reviewed.
- The open space between Redcar and Marske is necessary to provide a buffer between the sewage works and the nearest houses.
- It was requested that more definitive boundaries were identified between Marske and New Marske; and Marske and Saltburn.
- The Environment Agency support the recognition of the socio-economic value of a good quality environment to local communities , however request that the policy is amended to provide a greater emphasis on actions that specifically protect and improve the water environment in local neighbourhoods.

Policy N3 Provision of Open Space, Leisure and Community Facilities

2.77 The Policy attracted 9 comments.

- The policy was supported by Natural England.
- Development viability needs to be considered.
- Any financial contributions sought should meet the tests set out in paragraph 2014 the NPPF, policy wording should be amended to reflect this.
- Sport England fully supported the policy in principle but questioned why designations on the proposals map do not extend to education sites.
- Policy should be flexible and allow opportunities for off-site improvements and upgrades to existing facilities. There must be a qualitative assessment of facilities.
- The Theatres Trust requested that community and cultural facilities are extracted from the policy and covered separately.

Policy N4 Biodiversity and Geological Conservation

2.78 The Policy attracted 18 comments.

- The policy is supported by Natural England, Northumbrian Water Ltd, the National Trust,
- English Heritage commented that the concept of 'net gain' does not sit easily with the historic environment as it is a finite resource.

- The Woodlands Trust welcome the text outlining the key benefits of trees, woods and hedgerows. They welcome the protection of irreplaceable habitats but suggest stronger policy wording.
- Offsetting should be seen as a last resort. If used an increase in biodiversity should be provided local to the area of loss and this should be embedded in the policy.
- The RSPB supports many aspects of this policy and its positive intentions, however a number of additions and alterations to the policy are recommended.
- The Environment Agency requested the inclusion of text which advocated opportunities to create wet woodlands, that the policy is amended to provide greater emphasis on actions that protect and improve the water environment.
- The North York Moors National Park suggested that the policy should refer to protecting and improving important habitat networks, and that the policy should refer to strategic connections identified in the National Park Management Plan.
- Persimmon Homes acknowledge their responsibility to conduct appropriate assessments on appropriate sites and state that the council should ensure that they have a strong justifiable framework which should create universal guidelines for the Borough that clearly and simply set out the need for requirements, the scope of the assessments and the benchmarks for what is considered an acceptable and unacceptable impact on a site and mitigation measures.
- The Tees Valley Nature Partnership and Tees Valley Wildlife Trust support the statement on Natural Network and Opportunity Mapping. They suggest the inclusion of reference to the process of selecting and de-selecting Local Sites. There is no policy statement on the protection given to Local Sites and the policy fails to give protection to priority species or those protected by law.

Chapter 8 Historic Environment

2.79 We received 1 comment relating to this section.

- English Heritage indicate that the plan should provide a clear and positive strategy for the conservation and enjoyment of the historic environment in the area. Whilst read as a whole the plan does provide a positive strategy, aspects of this are spread throughout the document and should be brought together in one section. Concerns that the plan does not contain a strategy for dealing with heritage at risk within the borough.

Policy HE1 Conservation Areas

2.80 The Policy attracted 6 comments.

- There is a typographical error in paragraph 8.3 which makes it difficult to read.
- In subsections 'd' and 'f', reference to structures as well as buildings would be useful.
- English Heritage indicate that whilst outline applications in conservation areas are discouraged, there is no blanket prohibition in place.

- The coast between Redcar and Marske contains the same flora and fauna as the surrounding area, so should also be designated as a sensitive landscape area to protect it from development. Any development here would also damage the historic character.
- Preserving and enhancing should be used for existing buildings as well as new buildings.
- Respecting existing architecture and built form is admirable and should be highlighted more in the plan.
- Plan needs to identify how the community will be involved in putting the policy into practice. Having a joint responsibility for enforcement should be part of a planning control mechanism.
- There is no mention of Article 4 anywhere in the document and this should be an integral part of any conservation policy.

Policy HE2 Heritage Assets

2.81 The Policy attracted 7 comments.

- General support for the policy.
- A number of suggestions were put forward for amendments to the wording of the text in the policy.
- Eston Hills and its historic features have been left to rot and decay for many years by the Council. What is the Council going to regarding the sale of part of the hills again to private owners.
- The historic buildings/conservation sites such as Upsall Hall and Kirkleatham Hall should be protected for future generations.
- If our finest heritage assets includes Guisborough Priory and Eston Hills, views from these should be protected from wind turbines.

Policy HE3 Archaeological Sites and Monuments

2.82 The Policy attracted 6 comments.

- General support for the policy.
- English Heritage advise that the wording within the policy and supporting text is amended to ensure consistency with the NPPF. Suggested amendments have been put forward.
- The policy is not in accordance with the NPPF as it is unnecessary and onerous. It should be amended so that proposals in an area of known archaeological interest are supported by a desk-top survey at application stage. Depending on the outcomes of the desk-top survey, further work may be required.
- Some amendments to the text are proposed for consistency with the NPPF and other policies in the Historic Environment section. Check that 10,000 records for the HER is accurate as this seems a bit high.
- The policy is prescriptive and does not allow for judgement to be exercised.

Policy TAI Demand Management Measures

2.83 The Policy attracted 8 comments.

- Natural England support the policy.
- The plan does not mention how the Council intends to deal with the state of the roads for all users.
- Concerns over traffic impacts from proposed strategic housing allocation at Marske Inn Farm. The policy pins hopes on a 'soft' policy of demand management.
- To tackle climate change we need to stop building out-of-town supermarkets and dormitory estates in East Cleveland. If new housing developments go ahead, new infrastructure will be required.
- If long stay car parking is reduced it is essential to make improvements to public transport as an attractive alternative.
- The policy is 'anti-motorist' and 'anti-car industry'. The proposals do not gel with the aspirational nature of the rest of the plan, as to attract people to move to the area the lack of congestion and ease of travel and parking is a positive, which the plan seeks to remove.
- Tees Valley Unlimited recommend changes to the ordering of the paragraphs and inclusion of reference to the TVU Statement of Transport Ambition.
- Highways Agency support the policy, however the synergy between the Local Transport Plan and the spatial provisions of this plan should be made more clear.
- Almost the whole chapter is based on improving public transport, but the focus should be on reducing the need to travel in the first place. Ensuring fast broadband is available could reduce the need to travel.

Policy TA2 Travel Plans

2.84 The Policy attracted 4 comments.

- General support for the policy
- This section needs revising so that its more up-to-date. TVU are unlikely to be placing too much emphasis on Tees Valley Airport, following their proposed plans. Residents in East Cleveland can't be expected to enjoy new facilities in Redcar. An explanation needs including regarding transport needs of existing communities throughout the borough, particularly the increasing elderly population without access to a car.
- Cycling to work/school in East Cleveland is not possible due to steep slopes, bad weather and long distances that need to be travelled.

Policy TA3 Improving Accessibility within and Beyond the Borough

2.85 The Policy attracted 9 comments.

- Some support for the policy, including from the Highways Agency.
- West Midlands Pension Fund support the policy. Their outline application for land to the south of Marske included enhancements to the railway station, a park-and-ride car park, improvements to the pedestrian routes.
- Rail service should be extended to Guisborough and trolley buses used in East Cleveland.

- Concerns over impact on increased frequency of rail services to traffic in Redcar using crossing points. Improvements need to be made to scheduling and crossing points.
- People in East Cleveland need a more reliable bus service.
- Improve access by foot along Tilbury Road crossing point to Asda.
- TVU would like reference included for the proposed improvements at Greystones roundabout. Opportunities presented through the Strategic Economic Plan and the Local Growth Fund should also be mentioned.
- Reference should be made to DfT's 'electric spine'. Include support for proposals to electrify Northallerton to Middlesbrough rail line.
- The Council should look at scope for regulating bus transport in East Cleveland to improve timetables, connectivity and interlinkages.
- Local Plan should recognise potential need for a new access to Skinningrove Industrial Plant and possibility of adoption of any new bridge on Gaskell Lane, Loftus.
- There is a need to see that there is a policy co-terminus with the Minerals Local Plan to allow for pipeline development as an environmental improvement for conveyance of minerals and liquids and for reduction of excess HGV traffic.

Policy TA4 Sustainable Transport Networks

2.86 The Policy attracted 4 comments.

- Highways Agency supports the policy.
- RSPB indicate that where Teesmouth and Cleveland Coast SPA, or North York Moors SPA are being adversely affected by recreation, any mitigation from a Recreation Management Plan must ensure no adverse effects on the SPA.
- Natural England support the commitment to improving public access, however increased access to the coast and North York Moors may increase visitor pressure on these designated sites.
- TVU would like a reference to specific initiatives identified as part of the Local Sustainable Transport Fund.

Appendix 3 Proposed Standards for Open Space and Leisure

2.87 We received 1 comment relating to this section.

- There is no inclusion of extra football pitches for Dormanstown in the Local Draft Plan.

Appendix 4 Proposed Site Allocations

2.88 We received 2 comments relating to this section.

- Full details of the maps are not online so it is difficult to provide detailed comments without knowledge of the areas.
- Drawings in the appendices should be up-to-date.

Section/Policy

Draft Local Plan

DLP409**Full Name:** Ray Bryant**Organisation:** North Yorkshire
County Council**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** Yes**Comment summary:**

No objections. Support the strategic approaches being proposed.

Officer response:

Support noted

DLP432**Full Name:** Mr Graham Banks**Organisation:** Hambleton District
Council**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** Yes**Comment summary:**

Given that we share such a very short rural boundary with you outside of the National Park Local Planning Authority area, there is little of direct cross-boundary significance arising between us in your Plan's policies. The key strategic priorities of meeting your objectively assessed local housing needs and employment needs, whilst protecting the countryside from inappropriate development are fully addressed and we have no concerns to raise. We therefore support your new Local Plan. This is particularly in respect of seeking to stem out-migration by fully meeting local housing needs within the Borough through over allocating land and replacing difficult to deliver brownfield sites with more attractive large greenfield sites, such as those around Guisborough. This should lead to less pressure on the local housing market in nearby settlements in the north east of Hambleton (ie the Stokesley/Great Ayton area) which suffers from high house prices and affordability problems for local people. We are also pleased to see that you are seeking to meet your needs for Travellers pitches within the Borough. I trust that this proves helpful in demonstrating you have fulfilled the Duty to Co-operate and I look forward to future

Comment summary:

The Council does not wish to make any representations in respect of the matters covered by the draft Local Plan. The draft Local Plan's approach to planning for new housing is not considered to have any significant implications for Darlington Council's approach to new housing. On the issue of accommodating Gypsies, Travellers and Travelling Showpeople, it is noted that the draft Local Plan only seeks to meet the need arising from those that are either already resident in the Borough, or the new households that will arise from those over the plan period, and makes no provision for meeting the needs that were assessed as arising in the wider Tees Valley area in the 2009 Gypsy and Traveller Accommodation Needs Assessment (GTAA). However, we will be commissioning a Darlington GTAA shortly, and that once complete and agreed, this will be the basis for planning for traveller sites, replacing the 2009 GTAA in our evidence base.

Officer response:

Support noted. The plan provides sufficient pitches to meet the identified needs of the travelling community, based on a robust evidence base.

Agree with section?: No

Comment summary:

We object to the Draft Local Plan, as the plan stands, it does nothing to promote jobs in the borough. This plan only proposes to invest in more housing which in itself will not reverse the trend in population decline.

Officer response:

The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth, building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked.

Comment summary:

HRA - suggest 5km threshold may not be suitable in the area to capture the draw of European sites in the area. - suggest visitor survey data for sites should be reviewed/collected. - suggest strategic approach to tackling possible impact of recreational disturbance on sites. Sustainability Appraisal -support the contention presented in paragraph 7.2.10 that development ought to be focused upon those settlements either with existing services or with the likelihood of being provided with services since this would help sustain the viability of the services and those communities. Further, Natural England agree with the SA report that it would be preferable not to permit development outside development limits unless it is to serve a specific rural need since it would be likely to lead to increased car travel. -Paragraph 9.2.3 of the SA report observes that given the policy framework addressing designated sites that an opportunity exists for increased emphasis to be given to the protection of wildlife corridors and other linking features. Natural England support this view since the delivery of a landscape scale response to the management of biodiversity is needed to deliver adaptation and resilience to climate change. - Given the uncertainty of policies, Natural England wish to see that the proposed monitoring indicators are robust with suitable triggers and actions identified. - SA does not critique proposed monitoring framework in Local Plan

DLP747**Full Name:** Mrs A G Galloway**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

We are making an official objection to the Draft Local Plan in that it is flawed from start to finish. There is not the market for the number of houses you intend to build. These houses are being built on Greenfield sites only. If these plans go ahead, there will be fatalities because of extra traffic in already congested areas. You are making a rural conurbation into an urban conurbation, when we are known nationwide as having the most beautiful part of the country as it is, with seaside, countryside, moors and industry in our area. Any expansion will destroy all this. You state that people will want to come here to live near their work. What work? SSI is at capacity. Wilton sites are closing down. Unemployment is running at 11.9%, higher than any other part of the country. Why build expensive housing when there aren't any jobs available. The whole plan is flawed as it was drawn up on evidence given in 2006 by people who are not from this area. The council should not be allowing this planning application to go ahead for the sake of their own area. Stop and think.. You were elected by the people and should be working for the wishes of the people. I am having problems with damp and excess water as it is. Any development on flood risk areas will make things worse for us. Also property prices will be affected, transport access into Marske will be impossible. It is bad enough now with traffic speeding through the High Street. The humps are a waste of space because nobody takes notice of them.

Officer response:See Comment DLP746.

It is bad enough now with traffic speeding through the High Street. The humps are a waste of space because nobody takes notice of them.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has sought to allocate development in the most sustainable locations possible, in order to reduce the need to travel and the distance travelled. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. The Local Plan has been prepared using a robust and up-to-date evidence base. No changes are being proposed to the conurbation through the Local Plan. Policy SD4 seeks to direct development away from the areas most vulnerable to flooding, where possible. The potential impact of the Local Plan on property values is not a material planning consideration and therefore cannot be taken into consideration in the preparation of the plan.

Agent Organisation: Strutt & Parker
Submission type: E-Mail
Agree with section?: No

Comment summary:

Would like to see land at Cleveland Gate Business Park and Guisborough Rugby Club included as a regeneration policy for a mixed use development comprising retail and housing.

Officer response:

The proposals are not supported. The updated Strategic Retail, Leisure and Office Study (2011) did not identify a requirement for additional floorspace in Guisborough and the site is not in the town centre. Sufficient land has been identified to meet the assessed housing requirement in the Plan, including significant development within the rural area, particularly at Guisborough and which, taking into account subsequent permissions, amounts to 40% of the supply and thereby corresponds to the indicative development ceiling in the revised locational strategy under Policy SD2. The Guisborough sites could deliver around 750 dwellings, thereby potentially meeting housing needs over the plan period. As such, it is not proposed to allocate further housing land.

Comment summary:

The HSE recommends that where there are major hazard installations and MAHPs within the area of your local plan, that you mark the associated consultation zones on a map. The guidance in PADHI - HSE's Land Use Planning Methodology will allow you to identify compatible development within any consultation zone in the area of your local plan. The HSE recommends that you include in your plan an analysis of compatible development type within the consultation zones of major hazard installations and MAHPs based on the general advice contained in the PADHI guidance.

Officer response:

Policy SD4 indicates that development will be permitted where it avoids locations that would put the environment, or human health or safety, at unacceptable risk. This includes inappropriate development within HSE consultation zones. Paragraph 2.23 also indicates that, where necessary, the Council will consult the HSE on proposals which fall within the HSE consultation zone and advises that applicants should contact the relevant authority for information on consultation zones. It is not considered necessary to provide further detail on HSE consultation zones in the plan or show the consultation zones on the Polices Map.

Draft Local Plan

DLP809

Full Name: Mr Alan Hunter
Organisation: English Heritage
Agent Name:
Agent Organisation:
Submission type: Letter
Agree with section?: No

Comment summary:

In order that the historic environment is appropriately safeguarded when preparing the Local Plan it is necessary to fully understand the significance of any heritage assets which might be affected (directly or otherwise) by a site allocation and to carefully assess the extent of any harm to, or loss of, its significance in relation to any public benefits that the development might bring. This understanding forms an integral part of the evidence base for the Plan. An uncertainty relating to this casts doubt on the site allocation being justified, deliverable and, ultimately sustainable. The same should apply to sites of archaeological importance. The potential impacts on these should be considered before sites are allocated. Whilst the Housing Background Evidence Paper factors in the presence of listed buildings, archaeology, conservation areas as 'other constraints' this views the analysis does not consider the significance of these assets.

Officer response:

Consideration has been given to heritage assets when allocating sites for development. Where necessary, an assessment of potential development upon the heritage assets will be undertaken, based on their significance. No site allocations will be included within the Local Plan, where it is considered that the development would have an unacceptable impact upon heritage assets, or their setting, which could not be adequately mitigated. A more detailed assessment of the impacts of proposed development upon the historic environment will be undertaken at the planning application stage, taking into account Policies HE1, HE2 and HE3.

Why is the potash mine listed as being outside of the plan area if the plan is for the Borough? The mine is a vital part of the borough.

Officer response:

Boulby Mine is located within the North York Moors National Park, which act as the local planning authority for the national park area. However, the significant contribution that the mine makes to the local economy is recognised by the Council and the Redcar & Cleveland Local Plan.

Draft Local Plan

DLP1240	Comment summary:	Officer response:
<p>Full Name: Neil Douglas</p> <p>Organisation: RSPB</p> <p>Agent Name:</p> <p>Agent Organisation:</p> <p>Submission type: E-Mail</p> <p>Agree with section?: In Part</p>	<p>HRA 5.3 OBJECT Table 5 of the HRA, which summarises SSSI condition assessments for component SSSIs within the Teesmouth and Cleveland Coast SPA, includes a summary that the Redcar Rocks area of the SPA is in 100% favourable condition, with "No evidence of anthropogenic disturbance". This summary is ambiguous and could be read as the site not being affected by anthropogenic disturbance. Clearer wording would be "Effects of anthropogenic disturbance have not been assessed." An assessment of the current use of Redcar Rocks by bird populations of the SPA should inform any conclusions about the effects of disturbance. Without this, disturbance should be considered a potentially damaging operation for Redcar Rocks at Appendix 4. It is noteworthy that the Natural England condition assessment for this unit is a reference to conservation of geological features of the SSSI and does not refer to bird populations of the SPA, or any effects of anthropogenic disturbance. HRA 5.24 SUPPORT An additional consideration should be that the habitats and populations of the SPA have severely limited capacity to adapt to the effects of climate change, including coastal squeeze, which is a threat to favourable conservation status in the foreseeable future. HRA 7.3 COMMENT Table 17 of the HRA, which summarises SMP management prescriptions, omits potential policy plan actions identified in the relevant table of the SMP to address the effects of coastal change. These include investigating the use of dredged material to maintain the extent of the Bran Sands mudflats and consideration of a transition between the development area and Coatham Sands. Actions to address the effects of coastal change should be a consideration within local plan policies and could be considered within a strategic masterplan for the conservation and enhancement of biodiversity, which we recommend is prepared to support this local plan. HRA 7.7 OBJECT "The HRA that was completed for this document concluded that the policies were unlikely to have a significant effect on the North York Moors. No in combination effects with the Local Plan are predicted." (p.37 HRA) Where the Stockton Regeneration and Environment Local Development Document is identified in Table 18 of the HRA, the comments section fails to recognise the potential effects of this document on the Teesmouth and Cleveland Coast SPA. In this respect, the prediction that no combination effects are likely with the RCBC Local Plan is unsound. As it is a requirement that Local Plan decisions are based on the findings of the HRA process, it is vital that this HRA is comprehensive. Potential combined effects include disturbance and loss of functional land, in particular loss of feeding and roosting habitat for wintering birds using the SPA, which could occur as a result of the development policy of these plans. HRA 8.7 COMMENT Where precautionary mitigation is identified in the HRA (Para. 8.7), it takes the form of a requirement to carry out a screening exercise for Appropriate Assessment. This is considered a deferral of the assessment of any effects and the need for mitigation, rather than mitigation. Deferring consideration of the viability of development allocations to the planning proposal stage could lead to wasted resources being put into the preparation and submission of unviable applications, or lack of due consideration being given to the combined effects on European sites at the individual application stage. Details of how any Recreation Management Plan (Para. 8.8) would ensure that any proposed development would not result in an adverse effect on an SPA should be considered at this plan preparation stage. HRA recommended explicit reference to the Recreation Management Plan, Teesmouth and Cleveland Coast European Marine Site Management Plan and the North York Moors Draft Management Plan.</p>

Full Name: Melisa Burnham

Organisation: North Yorkshire
County Council

Agent Name:

Agent Organisation:

Submission type: E-Mail

Agree with section?: In Part

Comment summary:

North Yorkshire County Council (NYCC) as the Local Highways Authority (LHA) would ask that any impact the plan has on our local network should be identified and considered in the scope of the cross boundary traffic and its effect on our routes to the desirable service centres (Market Towns and Coastal towns). Where it is clear that the development will have a material impact on the North Yorkshire's Local Highway Network the NY LHA will want to be included in agreeing the scoping for the Transport Assessment (TA) and Travel Plan (TP). In other instances it is accepted that it may not become obvious until the volume of traffic heading towards the county boundary is identified in the actual TA. In those circumstances it is acknowledged that consultations may be delayed. If in doubt neighbouring authorities are asked to consult NYCC as LHA and let us make the judgement on the potential impact on our network.

Officer response:

There are no large sites allocated close to the administrative boundary which are anticipated to have a significant impact upon the local highway network within North Yorkshire. However, the Council will be mindful of the potential impact if any issues arise and NYCC can be assured that they will be consulted as appropriate.

INTRODUCTION

DLP301		Comment summary:
Full Name:	Mrs Heather Douglas	I find this document virtually unintelligible to the layman. It is long, wordy, technical, and deliberately complicated and convoluted - presumably to discourage the average council tax payer from commenting. I do not agree with the proposed housing development at Marske. It is not needed, is over development without infrastructure support and - based on the problems seen with flooding earlier in the year at both Marske and Redcar - could endanger existing properties.
Organisation:		
Agent Name:		
Agent Organisation:		
Submission type:	Web	
Agree with section?:	No	

Officer response:

The Draft Local Plan was written in plain English wherever possible. However, it is a technical document that sets out planning policies that must not only stand up to independent scrutiny by the Planning Inspectorate, but also be robust enough to avoid legal challenge through the courts. Therefore, plain English is not always appropriate. It has also been subject to a period of public consultations where planning officers have been on hand to discuss the document with members of the public. Objection to the housing allocation at Marske Inn Farm is noted and the issues raised are dealt with in the response to comments made on that policy.

DLP291		Comment summary:
Full Name:	Mrs Eileen Herd	1.6 states that local plans should reflect the vision and aspirations of local communities. The proposed development south of Marske is not in accord with the expressed wishes of many of the inhabitants of Marske. This also states that local plans should seek to meet the objectives, principles and policies of the National Planning Policy Framework. Why therefore is the Council seeking to build in an area which is outside accepted development limits and is clearly a 'greenfield' site, when the NPPF and the Council's own draft plan seeks to prioritise the use of 'brownfield' sites. Is this a case of saying what pleases the environmentalists while doing exactly what the Council pleases? Section 1.13 states that the Council has worked closely with the EA to ensure any new development is located in areas which are not at risk of flooding, yet the proposed area to the south of Marske is on an area known to be prone to surface water flooding and although possible solutions are said to have been examined there would appear to be no plans to do anything to ensure any developer would carry these out.

Officer response:

The Local Plan aims to ensure that sufficient development can take place to meet the needs and aspirations of residents of the Redcar and Cleveland. In order to do this, it is necessary to identify greenfield sites as there are insufficient previously developed sites that are suitable for housing. The identification of development limits is done through the Local Plan, and it is necessary to revise these to ensure that sufficient development can take place to meet identified needs. A large number of potential sites have been assessed and areas at significant risk of flooding have been avoided. The risk from surface water flooding at Marske Inn Farm can be managed and reduced through appropriate works to support the proposed scheme.

INTRODUCTION

DLP571		Comment summary:
Full Name:	Ann Higgins	TRANSPORT: 1.123 & 1.104: How can this statement be accurate as public transport cannot meet the needs of existing communities in the borough, so how can it accommodate new and large expanses of development proposed to built by the council, as stated we have a much larger growing elderly population who do not have access to good public transport need now. FLOOD RISK: 1.113 - contradicts the previous statement on flood risk i.e. Low Grange Farm was designated as a flood risk area as it is on the Ox Bow of the River and 1/3 of land was designated as a flood risk area, by the SFRA pre 2010 which is being ignored by the council and developers. The councils proposed large housing development by Westfield Pension is also susceptible to flooding, which should not be overlooked easily by the council. Disagree with the proposal to build a large housing estate at Marske as it contradicts statement 1.127.
Organisation:

Officer response:

In order to promote the use of public transport we have allocated sites in the most sustainable locations which are close to public transport options and close to services and facilities. The Local Plan also supports the provision of cycling and walking routes as part of development and requires the preparation of Travel Plans for strategic and significant development proposals to consider and include measures to encourage the use of sustainable modes of transport. A sequential approach to flood risk has been taken in the allocation of sites to ensure that development is located in areas least at risk of flooding from all sources. Where there is risk of flooding on an allocated site this will need to be addressed as part of any development with layout designed to avoid areas of higher risk. 1.113 will be updated to reflect this. This site at Marske Inn Farm was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement.

DLP758		Comment summary:
Full Name:	Mr Alan Hunter	The Vision and Approach for Redcar and Cleveland is welcomed. The statements and commitments amount to recognition that the historic environment and its heritage assets are regarded as a strategic priority for the Council and the Plan, thereby largely satisfying that part of NPPF paragraph 156. Paragraph 1.45 - To strengthen further the role of the historic environment within the Plan, however, the Vision Statement could helpfully refer to the safeguarding and improvement of the historic environment generally and all asset types, designated or otherwise, not just buildings and structures, especially those judged to be at risk. Paragraph 1.47 - the borough's heritage assets are not only an asset, but an opportunity, the constructive use of which has wider social, cultural, economic and environmental benefits. Paragraph 1.67 - inclusion of the listed building within the Enterprise Zone would have done much to bring about improvements to its wellbeing. The historic environment is to be positively embraced rather than avoided wherever significance is not compromised. Paragraph 1.69 - English Heritage welcomes efforts to improve the fortunes of the borough's town centres. Many will be conservation areas containing numerous listed buildings and other heritage assets, the future of which is less certain these days. Paragraph 1.78 - the historic environment is a vital offer in terms of helping the economic recovery. Paragraph 1.84 - site selection should also seek to conserve the borough's outstanding historic assets.
Organisation:	English Heritage	
Agent Name:		
Agent Organisation:		
Submission type:	Letter	
Agree with section?:	No	

Officer response:

Support for the vision and approach is noted. Para 1.45 - vision will be amended to refer to the safeguarding and improvement of the historic environment generally. Para 1.47 - table to be amended to include heritage assets as an opportunity. Points relating to 1.67 & 1.78 will be taken into account in reviewing 'Outcome 3' from para 1.96 of the Draft Local Plan onwards, as they are considered to be valid points but out of context with the rest of those paragraphs. Para 1.84 - text to be amended to refer to conservation of heritage assets.

INTRODUCTION

DLP283**Full Name:** mr Jeff Rudd**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

Object to further housing development in Guisborough, which has already grown significantly over the last few decades. There are no major employers or commuter routes and Guisborough is not a hub for education or retail. People choose to live here as it is not a large town or housing estate. Traffic is already dangerous in the west (The Avenue/Stokesley Rd.) and there is not the infrastructure to deal with hundreds more residents - doctors surgeries also running beyond capacity. Nobody is struggling to find a property in the area and there is not a shortage as there are many houses are for sale/rent.

Officer response:

Guisborough is the largest rural settlement in the borough and is therefore a sustainable location for housing development. There has been relatively little new housing development over the last 15 years and it remains a popular location for family housing. It is also one of the few locations in Redcar and Cleveland where it will be possible to achieve executive housing development. The Council's Engineers have not highlighted any concerns over highway capacity or safety in being able to accommodate the level of housing development being proposed. We have, and will continue to involve the NHS in preparing the Local Plan to ensure that they are able to provide a sufficient service to meet the needs of existing and future residents.

DLP40**Full Name:** Mr William James Kelly**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

Section 1.95 states "...as can be seen, there are elements of unmet affordable housing needs in every sub-area ...except Greater Eston....The greatest unmet needs are demonstrated within the Redcar, Guisbrough and Skelton sub-areas and relate to smaller, general needs units."But the action plan talks about development at Marske, and mixed Executive/Executive-style housing - again obtuse.

Officer response:

Para 1.95 specifically relates to affordable housing needs - i.e. households whose needs cannot be met by the market. The housing allocations, including the site at Marske Inn Farm, aim to deliver a much wider range of housing to meet affordable and market housing needs, including executive and executive-style housing.

DLP39**Full Name:** Mr William James Kelly**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

Cannot make head or tail of Tables 3 and 4 - how are they formulated and what are they telling us?

Officer response:

Tables 3 and 4 are taken from the Strategic Housing Market Assessment, and show the net and gross annual affordable housing requirements for the borough, and by sub-area, for general needs and older person housing. This is an indication of the number of houses that need to be provided to meet the needs of people who cannot afford to access market housing.

INTRODUCTION

DLP38**Full Name:** Mr William James Kelly**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

Section 1.89 - talks about "lower weekly earnings leading to an increased demand for both social and private rented housing, and that this is likely to grow even further". It then goes on to say that housing developments will be (largely) Executive or Executive-style housing, which is obtuse. The plan should properly identify the extent of the need and drive housing developments targeted at the results, otherwise it is just 'pie in the sky'.

Officer response:

Para 1.89 highlights current issues some sectors of the community have in gaining access to mortgage finance that consequently has an impact of increasing demand for private and social rented housing. This is one element within the context of a range of unmet housing needs for the whole community, many of which are leaving the borough and choosing to live elsewhere where executive-style housing is available. The full range of identified needs are set out in the Local Plan, and fully detailed in the Housing Background Evidence Paper and the Strategic Housing Market Assessment that have been used in the preparation of the plan.

DLP37**Full Name:** Mr William James Kelly**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

Section 1.45 - States that "to the south of Marske, a new community will be created through the development of significant area of mixed housing alongside new community facilities". This requires reflection: the proposed development is not wanted by the residents. A "new" community sounds very separate, if any development goes ahead it should be integrated. Significant work on flood prevention/planning should be carried out before anything is decided. I would suggest that residents across the borough should be asked where they would prefer new housing developments to be sited, and under what circumstances.

Officer response:

The site identified to the south of Marske is a critical site for delivering the overall strategy of retaining our existing level of population, and meeting identified housing needs. There have been a number of public consultations seeking views on the location of new housing and no more appropriate options have been put forward to the Council. The creation of a new community is a key project in the Council's Regeneration Masterplan. We will continue to work with the landowners and developers to ensure development proposals are appropriately linked to the existing community at Marske.

DLP36**Full Name:** Mr William James Kelly**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

Section 1.25 - I would like to see an explanation for the rather large local increase in households, in the context of a relatively large decline in the local population: it does not make sense.

Officer response:

The number of households is increasing due to a number of factors, principally people are living longer and household sizes are getting smaller - there are more couples and single person households as well as increased pressure arising from divorces. Government statistics indicate that if our population continues to decline at a similar rate (approximately 400 per annum) there will still be an increase in housing demand of 200 additional households per annum.

Comment summary:

Regional Spatial Strategies are no longer in effect, so why on Page 8 Para 1.8 still refer to our spatial strategy? The IDP, which sets out the infrastructure required, will continue to be updated alongside the preparation of the Local Plan. How can we the public be expected to wait until April 2014 to contribute to something still being updated? It is well recognised that Marske is a village and wishes to remain as is. I hope the housing allocation to the South of Marske can be removed. Why a new community and current outline plan not offering new community facilities. Statement at 1.73 on new ASDA store at Skelton just another one of a number presenting what you see as achievements and justifying action. Tees Valley Unlimited and ONS population figures show a reduction in population and large increase in retired people. Your plans are at odds with need. Can the types of statements related to affordable housing at 1.88, and others which follow, be justified taking due consideration of Local Government Act 1986 and the related Code of Recommended Practice on Local Authority Publicity as revised by the Secretary of State on 2 April 2001 "A local authority shall not publish any material which, in whole or in part, appears to be designed to affect support for a political party." 1.89 A continued lack of access to mortgage finance and the requirement for home buyers to provide larger deposits means that many households are still unable to become owner-occupiers. If you are allowed under statute to include, must on balance include at least regard to Government Policies with Help to Buy! Why after at least three years is there still no Coatham Masterplan? The allocation should be removed. The Strategic Flood Risk Assessment (2010) must be seen as well out of date when you consider flooding in the Borough. Redcar, Marske and New Marske are being included for future House building. Previous attempts to deal with excess surface water drainage/storage has failed. The necessary infrastructure should be in place and any Flood Risk Assessment should have been carried out with due regard to Housing Proposals already in receipt of Planning Approval as well as large scale Industrial/Commercial development in East Cleveland.

Officer response:

The reference to spatial strategy at para.1.8 relates to the spatial strategy for the future development of Redcar and Cleveland, i.e. that contained in the Local Plan. The reference is unrelated to Regional Spatial Strategy. A draft Infrastructure Delivery Plan (IDP) to support the implementation of the Local Plan was produced in September 2013. This formed part of the background evidence base and was available on the Council website throughout the consultation on the draft Local Plan. Infrastructure providers will revise their plans over the proposed timescale of the Local Plan and planned provision and subsequent infrastructure requirements will evolve. The IDP will therefore be updated to reflect changes. Whilst it is noted that the scale of the development south of Marske would be significant, it has been necessary for the Council to identify a strategic housing site of this scale to enable the delivery of a sufficient supply of housing to meet the identified housing needs of the borough across the plan period. After assessing several options in the conurbation area, which is the main focus for employment, population and development within the borough, the site was considered by the Council to present the most sustainable and acceptable option. The policy requires the provision of community facilities to support the development. Text at 1.73 provides background and context on our town and district centres, and explains that since the retail study was undertaken a new food store has opened to meet need identified in the study. Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline. It is therefore necessary to provide an appropriate mix of sites to provide for the needs identified in the Strategic Housing Market Assessment. Text on affordable housing at 1.88 provides a factual background information on the factors affecting the need for affordable housing in the borough. It is not considered that this could be classed as material designed to affect support of a political party. The Council continues to support the regeneration of Coatham and is committed to producing a masterplan for the area. It is therefore considered appropriate to designate the site within the Local Plan. In addition to considering the findings of the SFRA, the Council has worked closely with Northumbrian Water Ltd. and the Environment Agency to ensure that development is located in areas at least risk of flooding. The latest flood risk maps from the Environment Agency have also been used. As part of any planning application appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required to show that not only can flood risk be mitigated on site but that flood risk will not increase the surface water or groundwater flood risk elsewhere.

INTRODUCTION

DLP138**Full Name:** Mr Timothy Argument**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

The premise that increased housing provision will drive an increase in jobs is flawed. To reduce out migration we need an area people want to live in and jobs for them to do. Before building new unaffordable housing we need to ensure that existing stock is taken up, new build when required is instigated in line with real demand on brownfield sites first before moving onto vanity sites with high (potential) Council Tax yield (only IF they are occupied) in the green belt. The Draft Plan appears to be ineffective as the Marske Housing plans flies in the face of many of its 'safeguards' - if these cannot be observed why support any of it?

Officer response:

The overarching strategy that underpins the Local Plan is retain our existing population. Our evidence base demonstrates that over the last 10 years (and longer) there has been continued trend of population decline as economically active people choose to leave Redcar and Cleveland and buy houses elsewhere in the Tees Valley. This indicates that we do not have an appropriate supply of housing to meet the needs of our residents. The housing allocations have been prioritised on suitable brownfield land. However, there limited development opportunities on such land to allow sufficient housing to be developed to meet our identified needs, and greenfield sites will be required across the borough.

DLP823**Full Name:** Mr Dave McGuire**Organisation:** Sport England**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Sport England supports the vision where it states 'residents and visitors alike will be more active and have access to quality sport and recreation facilities. Support is also given to para 1.103, which states the intention to ensure that developments are supported by adequate provision of open space, sport, recreational and community facilities. However, the overall soundness of the Local Plan is challenged on the basis that it is not compliant with the NPPF, in particular as it considered to be based upon an out of date evidence base, namely the Playing Pitch Strategy (2011) and the Leisure Needs Assessment (2007). Should have used the document entitled 'Redcar & Cleveland Borough Council Leisure Provision Strategy 2011'.

Officer response:

Support for part of the vision and para 1.103 is noted. The evidence base will be reviewed in finalising the Local Plan.

DLP636**Full Name:** Mr Ben Stephenson**Organisation:** Persimmon Homes Teesside**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

We are keen to work with the Council to ensure that it takes forward a sound, realistic yet aspirational Local Plan that can meet the ambitions of the Borough and its residents. Persimmon Homes would like to fully endorse the representations made on behalf of the Home Builders Federation. We would like to take this opportunity to re-emphasise our own concerns with the document whilst also reiterating our philosophy to work with Local Authorities to produce sound, deliverable plans. Persimmon Homes support the HBF representations which requests that earlier within the document greater clarity is provided as to the plan period. It is also important that the council ensure that as a minimum the plan covers a 15 year period, in accordance with paragraph 157 of the NPPF to take account of longer terms requirements of the Borough. Persimmon Homes generally support the Vision and Objectives set out within the Introduction of the document. However, we do consider that the vision should reiterate paragraph 47 of the NPPF's need to 'boost significantly the supply of housing'. The interrelationship between the economic growth objectives and the role significantly boosting the supply of housing can play within this is iterated at paragraph 1.78 of the Draft Local Plan and is supported by Persimmon Homes.

Officer response:

Endorsement of HBF comments is noted. We consider that the plan period is clearly set out as being a 15 year period from 2014/15 to 2028/29. However, to ensure that the plan will cover a minimum 15 year period from adoption, we will change the end date to 2030. General support for the vision and objectives is noted, and it is considered that the priorities set out are appropriate and NPPF compliant as well as fully reflecting the Council's Corporate Plan ('Our Plan'). Support for the recognition of the relationship between housing and economic growth is also noted.

INTRODUCTION

DLP527**Full Name:** Anna Turley**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

I welcome the publication of the Local Plan for Redcar and Cleveland. This is an important document for setting a strategic vision for our borough, and it is vital this document strikes the right balance between supporting economic development and enabling our communities to thrive and prosper, whilst ensuring the natural beauty and unique character of our area is preserved. I hope that the spirit of 'localism' that the Plan pays tribute to will mean that the response and feedback from the community will be truly reflected in the final document, and that the final plan is one that has been developed with the community, not one that is felt to have been done to them. Community Infrastructure Levy (1.112) I note there are no plans to charge a community infrastructure levy (CIL) on new development. I would have thought that any opportunity would be welcomed to raise finance for the benefit of key community infrastructure such as transport schemes, flood defences, schools, hospitals and other health and social care facilities, parks, green spaces and leisure centres that the CIL can provide. I would be keen to know whether the viability assessment that led to this decision is published.

Officer response:

Support for the preparation of the Local Plan is noted. CIL is not being pursued due to viability concerns, as recommended by the 'Whole Plan Viability Testing' study (2013). This concluded that the projected revenue from CIL would be less effective in delivering necessary infrastructure than using the established mechanism of Section 106 Agreements. This study is available on the Council's website at www.redcar-cleveland.gov.uk/localplan. We will continue to review the appropriateness of implementing CIL in Redcar and Cleveland and may seek to implement the levy should viability conditions improve.

DLP1224**Full Name:** Neil Douglas**Organisation:** RSPB**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Vision for Redcar and Cleveland 1.45 SUPPORT The RSPB welcome the intention to continue to protect and enhance biodiversity and the distinctiveness of the borough's coastline and countryside. Suggest addition. 1.61 OBJECT The RSPB consider further planning required to ensure that industrial expansion is compatible with the area's protected wildlife populations. Some of the area is designated as part of the Teesmouth and Cleveland Coast Special Protection Area (SPA) and Ramsar Site. However, other non-designated sites are functionally linked to the SPA by providing foraging and roosting sites for SPA species. Allocated Development Limits within the Draft RCBC Local Plan could potentially result in applications for developments, which alone, or in combination, could have an adverse effect on the integrity of Natura 2000 sites within the influence of the borough. Development should be avoided in such functionally related areas around the SPA; please see objection to Policy SD 3 Development Limits. Cross-boundary combination effects with other local plan documents in the HRA have not included consideration of the land allocations by Stockton Borough Council, or combination effects on the Teesmouth and Cleveland Coast SPA. 1.62 OBJECT The expansion of Teesport must take into account the need to ensure effective protection of the Teesmouth and Cleveland Coast SPA and Ramsar site and the bird populations for which it is notified, including where they occur outside the SPA boundary; please refer to previous comments. Any appropriate assessment should take account of the likely impacts of other developments and plans upon the SPA, particularly within RCBC, Hartlepool BC, Stockton BC and Middlesbrough BC. Outcome 3: Improve quality of life 1.97 SUPPORT The RSPB welcome the recognition given to the coastline and world class natural environment as assets which contribute to the quality of life enjoyed by existing residents, future generations and help to attract new investment. Designated sites provide a core for wider wildlife tourism and help to attract new investment. Designated sites provide a core for wider wildlife tourism opportunities and ecosystem services, contributing to the attractiveness of the borough.

Officer response:

Support of vision noted, wording will be updated to in accordance with suggestion. Policy ED6 'Protecting employment areas' already requires proposals to demonstrate that there will be no significant adverse impact on the integrity of the Teesmouth and Cleveland Coast SPA and Ramsar site, or other European designated nature conservation sites either alone or in combination with other plans and programmes.

INTRODUCTION**DLP341****Full Name:** mr philip thomson**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** In Part**Comment summary:**

page 13 1.40 What is meant by housing market failure? What evidence exists to quantify that this statement is not just a 'strategic aim' but has substance? 1.41 the written affordable housing policy conflicts with the verbal assurances given at full Borough Council meetings, specifically on 24.10.13. page 17 What powers will be introduced to 'safeguard and improve buildings of cultural and historic importance'? page 26 1.93 the division into sub-areas requires revisiting. page 27 1.94 Redcar and Saltburn are listed as sub-areas. There is no mention of New Marske and Marske, which are substantial habitations in their own right. pages29/29 Reference is made to improvements in bus and rail services. the extensive building at Skelton has not been accompanied by improvements in infrastructure nor services. there is further housing development planned for Skelton. The proposed rail extension of the Middlesbrough Line past Saltburn has not taken place and is not scheduled to take place on any predicted date within the Local Plan lifetime. page 31 1.111 The Tees valley Strategic Infrastructure Strategy does not mention any improvements planned for Four Lane Ends. At this junction traffic has to cope with a significant incline leading to a set of traffic lights. With more developments of housing and 'industry' in East Cleveland planned, this already taxed junction needs to be addressed.

Officer response:

Housing market failure is an issue in some areas of the borough where neighbourhoods no longer meet the housing aspiration of the residents. In areas such as Greater Eston efforts have been made to reduce the over-supply of obsolete and unpopular housing. The Redcar & Cleveland Housing Strategy explains the actions the Council will take to address these strategic aims. The affordable housing policy requires all new housing development of 15 houses or more to provide a minimum of 15% of on-site housing as affordable units, or for development below this threshold a 15% on-site affordable housing contribution will be required, apart from the Greater Eston sub-area where will be no affordable housing requirement. This percentage was decided so as not to stifle overall development while contributing towards identified needs. Policies HE1 and HE2 will help to protect and enhance the borough's heritage assets, including buildings of cultural and historic importance. Policy TA2 includes the requirement for any strategic or significant development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport and improve transport choice, including cycling and walking. The proposed rail extension has been included in the Local Plan as it remains a long term aspiration. The division into sub-areas at 1.93 is established through the Strategic Housing Market Assessment (SHMAA). If necessary these areas will be updated in the next review. For the purpose of the SHMAA figures for Marske have been included with Redcar and New Marske with Skelton. Policy TA3 supports the improvements of public transport links, including to bus and rail services. The impact of planned future development on the transport network was considered by transport consultants and has been used to inform any needed infrastructure improvements.

INTRODUCTION**DLP11****Full Name:** Mr Michael Watson**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** In Part**Comment summary:**

Flooding is a major issue which is not being dealt with through the plan.

Officer response:

The Local Plan reflects the approach set out in the National Planning Policy Framework (NPPF) by requiring development proposals to be designed to take account of flood risk (Policy SD 4(l)) and to manage surface water (SD 4(m)). In addition, in assessing potential site allocations, we have taken into account flood risk and each site's ability to achieve development within the context of avoiding areas of flooding, or including satisfactory mitigation measures can be implemented. The Local Plan has been informed by the Redcar & Cleveland Strategic Flood Risk Assessment. All planning applications on land that has been identified to be at risk of flooding will be required to follow the approach set out in the NPPF, and some developments will need to be accompanied by a Flood Risk Assessment a Drainage Strategy, which will need to be approved by the SuDS Approving Body. The Council has also prepared a Surface Water Management Plan for Redcar, which has been taken into account when developing the Local Plan policies. To provide further guidance on flood risk, a policy will be developed and included within the Local Plan on flood risk management.

Comment summary:

1.58 Whilst acknowledging your estimate of 7,000 jobs at Teesport is this a reality in a declining economy? R&C should aim to develop inner areas rather than green field in order to achieve a low carbon economy and help meet climate change targets. Inner areas are currently under trading so need to be made more vibrant and attractive. This would be preferable to more supermarkets on the fringes eg Tesco at Eston and Asda at Skelton which are reducing trade and threatening livelihoods. 1.82 We believe that there is a need for more smaller houses and bungalows to meet the needs of single people, the retired and young couples seeking starter homes. Too much emphasis is placed on 4 bedroom executive properties. 1.89 If this is correct why pursue so much new build? 1.101 The DLP states that studies have found positive psychological benefit associated with enhanced access to nature and even viewing a natural scene can rapidly lower anxiety and stress. This being the case the Council should avoid turning the Borough into a forest of wind turbines such as is threatened for Eston Hills and its environs.

Officer response:

One of the most important outcomes for the Council is to help grow our economy and create more jobs. It is recognised that the Regeneration Masterplan sets out ambitious targets and the Local Plan aims to support this. However, it is also recognised that not all of this may be achieved. We have, therefore, also drawn on evidence of the 'Whole Plan Viability Testing' study to ensure that we are planning for a level of economic development, and associated housing development, that is likely to be delivered during the plan period. However, should there be more jobs created, there is sufficient flexibility within the proposed policy framework to accommodate some additional development. We will continue to monitor and, if necessary, review the Local Plan to reflect this. With regards to housing types, the Strategic Housing Market Assessment provides us with a robust indication of the housing types required to meet local needs. Development proposals will be required to meet these requirements. Re: 1.89 - access to mortgage finance is problematic for certain sectors of the community, and new affordable housing is still required to meet their needs. We also expect access to finance to improve during the plan period. Re: 1.101 - we have a significant area of countryside, much of which will not be suitable for development - including wind turbines. However, it will be necessary to deliver renewable energy schemes, in accordance with the government's aims. We believe the approach set out in the Local Plan will help ensure that on-shore wind turbine developments are only permitted in appropriate areas whilst protecting the most attractive countryside locations.

Comment summary:

To grow our economy and create more jobs presents a monumental task. Long term decline in local industries and thousands of redundancies, with resulting population decline. Although the UK economy appears to be slowly improving it is still a challenging time for service and industrial companies, with little evidence of new business heading in R & C's direction. To develop great places to live & Improve quality of life - if these are to be achieved then the Council needs to look again at some of it's proposals. The green corridors between towns and villages are reducing. We would have liked to see more definitive barriers between communities so that the encroachment/urban sprawl is prevented and a sense of place is retained within individual communities. This could be done with proper green wedges rather than narrow landscaped corridors. There seems to be no restriction on house building, nor is there any policy regarding the location of wind turbines. The result is that we are in grave danger of living in a concrete jungle of housing interspersed with a wind farm forest. The council continues to build on the green field sites around Guisborough and is intent on major housing in building in Marske, Skelton and Nunthorpe, as well as smaller developments elsewhere in the Borough. Eston Hills are threatened with ruination by huge wind turbines. None of this is conducive to an improved quality of life or the Borough being a great place to live.

Officer response:

It is recognised that the strategic aims of the Council, and the Local Plan, are ambitious. However, we are aiming to put appropriate policies in place to provide the right conditions to achieve population retention, economic growth and job creation. In order to ensure we plan for sufficient development to achieve our strategy, it is necessary to identify sufficient developable land, including greenfield sites on the edge of settlements. There are also a number of policies to ensure that settlements will remain separate, including green wedges, strategic gaps and development limits. Policy SD6 sets out the criteria by which wind turbine proposals will be considered. It is considered that the approach set out in this policy is the most appropriate for delivering the correct balance of allowing some development whilst protecting the most sensitive landscape areas.

We suggest that the Evidence Base for the Plan should also include documents relating to the review of the Borough's ecological resource in order to demonstrate comprehensive and up to date data has been used to produce the Plan. These might include the Council's own LDF paper on Local Sites, the Tees Valley Geodiversity Action Plan and the Tees Valley Local Nature Partnership's Local Sites Selection Criteria.

Officer response:

The evidence base will be updated and the Local Plan reviewed accordingly.

DLP517**Full Name:** Matthew Good**Organisation:** Home Builders Federation Ltd**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

The HBF is supportive of the Council undertaking a review of its Local Plan. It is considered that this is especially important given the significant changes to the national planning policy context since the adoption of the Core Strategy in July 2007. The plan period is suggested to be 2014/15 to 2028/29, this confusingly only relates to a 14 year time period. It appears adoption is unlikely to take place until December 2014 at the earliest; therefore, the plan period will be less than the recommended 15 year time frame (NPPF paragraph 157). To provide greater clarity to the plan it would be useful if the dates were clearly stated in the introductory paragraphs. Establishing the plan period is essential for the purposes of calculating the housing requirement, the housing trajectory, the five year land supply, and consideration of whether it is necessary to address any backlog in delivery. Therefore, a more suitable end date for the plan may be 2030. In preparing a 'Duty to Co-operate Statement' it is important that the Council identifies how it has worked constructively with other bodies to overcome issues raised. I draw the Council's attention to the draft National Planning Practice Guidance (NPPG) which states that 'it is unlikely that this (the duty) can be satisfied by consultation alone' and that 'inspectors will assess the outcomes of the co-operation and not just whether local planning authorities have approached others'. The issue of housing delivery is a strategic priority for Government and in compliance with NPPF paragraph 178 it is essential the Council provides evidence of joint working on this issue. The joint SHMA is noted, it is important, however, that the Council clearly identifies what actions have arisen from this and other housing work. The HBF is generally supportive of the Council's proposed vision. Particular support is provided for the vision to improve the economy, provide a choice of good quality housing and attracting the economically active to live in the area. The recognition of the important link between housing and economic growth in paragraph 1.78 is welcomed. The HBF does, however, consider that the plan could go further in promoting housing growth within the area through more positive policies. This point is expanded upon in our comments against other policies in the draft plan. The HBF is supportive of the identification of providing a 'good range and quality of housing' as a plan priority in outcome 2. This could be strengthened by amending the priority to read 'Provide a good range and quality of housing to fulfil the current and future needs of the area'. The suggested amendment would more closely align the outcome with the requirements of the NPPF to provide for the full objectively assessed housing needs of the area.

Officer response:

Support for Local Plan review noted, as is the support for the housing aspects of the vision and the recognition of the link between housing and economic growth. 2014/15 to 2028/29 is a 15 year period. However, to ensure that the plan will cover a minimum 15 year period from adoption, we will change the end date to 2030. Comments on duty to cooperate statement are noted. The priorities of Outcome 2 reflect the wording of the Council's Corporate Plan ('Our Plan') and as such will not be amended.

We support the approach to set out a strong vision from which to build the Local Plan. We are pleased to see recognition for the Borough's rich biodiversity and natural habitats in the vision and that these will be protected and enhanced. However, we think that the vision should also recognise the value of these natural assets to the Borough in terms of attracting investment and tourism and in the quality of life of residents.

Officer response:

Support for the vision is noted. Agree that the natural environment of the borough is important for attracting investment and tourism, as well as having a positive impact on residents' quality of life. Vision will be amended to reflect this.

DLP303**Full Name:****Organisation:** Tees Valley Nature Partnership**Agent Name:** Mr Jeremy Garside**Agent Organisation:** Tees Valley Nature Partnership**Submission type:** Web**Agree with section?:** In Part**Comment summary:**

We suggest that the evidence base for the plan should also include the Tees Valley Local Nature Partnership's Local Sites Selection Criteria and the Tees Valley Geodiversity Action Plan in order to demonstrate that comprehensive and up-to-date data has contributed to its compilation.

Officer response:

The Tees Valley Local Nature Partnership's Local Sites Selection Criteria and the Tees Valley Geodiversity Action Plan will be included within the evidence base for the Local Plan, and the Local Plan will be reviewed within the context of this.

DLP336**Full Name:** Mrs J Dolan**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** In Part**Comment summary:**

Outcome 3 - Improve Quality of Life: Would like to see the problems experienced at the eastern end of Redcar High Street [noise, anti-social behaviour etc.] resolved to improve residents quality of life. Would like residents to be fully consulted about planning issues. The eastern area of Redcar High Street could be a 'heritage sector' with two listed buildings, Zetland Museum, some fishermens cottages, Yorkshire cobbles etc.

Officer response:

Any applications for future developments will take into account the impact on the amenity of neighbouring occupiers. The hot food takeaway policy sets out criteria for controlling these uses, which have previously been focused around the eastern end of the High Street in Redcar. Whilst there are no specific plans to create a 'heritage sector' within the plan, this type of scheme could be delivered within the proposed policy framework should it be forthcoming.

Comment summary:

As a working mother from a young household in which both parents are employed home owners we would be considered to be the 'economically active' that you wish to attract to live in the borough, however if the current plans for Marske were to go ahead this would make us much more likely to move away from the area. This would greatly sadden me as I have spent my whole life living in Redcar and Cleveland and love the area, however the prospects for my child's future health, wellbeing and quality of life would most likely make a move a necessity if the plans to destroy the beauty and character of the area were to go ahead. I thoroughly agree with the quote 'The special character, biodiversity and distinctiveness of the borough's coastline and countryside will continue to be protected and enhanced. The diverse and high quality environment is rich in wildlife with unique geological features and can be enjoyed by local communities and visitors through a network of pedestrian, cycling and equestrian routes linked to urban areas' -these are the reasons we choose to live here and not in Ingleby Barwick! However I fail to see how the current development plans will 'ensure efficient use of finite resources, thereby leaving a positive legacy to our future generations' as suggested in the plan. Good agricultural land and greenfield sites are finite resources and the current plan is determined to destroy these in great number in both Marske and Guisborough. I do not believe the plan is 'considering the impact on local communities and ensuring that the borough builds on its own unique strengths and assets' as it claims it will. I feel that the only people who will benefit from the development are the property developers and not residents of Redcar and Cleveland. I fail to see where the projected demand for this housing is coming from - I see no evidence in the plan, only talk of 'declining populations' and 'ageing population' so why destroy the 'the outstanding, natural and built environment of our coast and rural areas' to line the pockets of developers and halt the sale of older properties even further? The plan is full of contradictory information and needs severe rethinking on the part of the council. It appears to pay lip service to what the residents, who the council are paid to represent, need and want, but then plans to do the exact opposite?

Officer response:

The Local Plan aims to identify sufficient land to meet development needs over a 15 year period. These needs must be balanced against the need to protect the countryside. The available evidence demonstrates that insufficient housing has been developed in Redcar and Cleveland resulting in many people choosing/having to leave the borough and live elsewhere. At the same time, households in the borough are getting smaller and people are living longer putting greater pressure on our housing stock. Our aim is to ensure that enough housing is developed to retain our existing population and meet the needs of our residents. In order to develop sufficient housing to achieve this, it is necessary to identify greenfield housing sites that are likely to be developable. We would like to ensure that all of our population has the opportunity to remain in Redcar and Cleveland.

Submission type: E-Mail

Agree with section?: In Part

Comment summary:

Barratt Developments Plc (BDW) supports the Council's decision to prioritise the provision of a "good range and quality of housing" throughout the plan period. This could be strengthened by amending the priority to read "Provide a good range and quality of housing to fulfil the current and future needs of the area". This would closer align the Outcome with the requirements of the NPPF to meet the full objectively assessed needs of the area. We note that Table 3 on page 26 demonstrates the annual affordable housing requirement in Redcar and Cleveland throughout the forthcoming plan period. This data is taken from Table ES1 (p8) of the 2012 Tees Valley SHMA, which only forecasts the annual need between 2012/13 and 2016/17. As the plan period is proposed to run until April 2029, we recommend RCC undertake further study to establish a total need for the borough.

Officer response:

Support noted. The priority to provide a 'good range and quality of housing' is taken directly from the Council's Corporate Plan ('Our Plan') rather than being a specific priority developed by the Local Plan. Para 1.79 does go on to explain that 'Our core ambition over the next 15 years is to improve Redcar and Cleveland's offer of high-quality, well-designed, affordable and aspirational homes in locations which support sustainable economic growth and vibrant, mixed communities in places people choose to live'. Table 3 is taken directly from the Strategic Housing Market Assessment (SHMA), which provides an indication of affordable housing requirements in Redcar and Cleveland. Policy H4 explains how affordable housing will be delivered through the planning process. Given the changing nature of affordable needs, it is not considered appropriate for a SHMA to cover a period of more than 5 years. Should a future review of the SHMA identify changes to the affordable housing requirements of the borough, this will be taken into account through the planning process and will influence any future review of the Local Plan.

INTRODUCTION

DLP874

Full Name: Michael Hoult
Organisation: Highways Agency
Agent Name:
Agent Organisation:
Submission type: E-Mail
Agree with section?: In Part

Comment summary:

The Agency is generally supportive of the Plan's vision and aspirations to guide development towards sustainable locations and ensuring that it is supported by a comprehensive infrastructure network. However, the Vision gives little consideration to manage travel demand, reduce congestion and ensure that the transport network operates efficiently and is capable of supporting the Plan's growth aspirations. It should also deliver sustainable transport improvements, such as to public transport, walking and cycling services and facilities, as a means of encouraging a modal shift to more sustainable modes and to reduce the need to travel by private car. The Agency is generally supportive of the intended Outcomes that have been used to shape the Plan's strategy and policies, although by leaving the detail to the supporting text, it makes it difficult to relate the relevant details to the corresponding 'Plan Priorities', which are relatively vague for development plan objectives. With regards to Outcome 1, paragraph 1.58 of the supporting text makes reference to the generation of 14,000 new jobs over the lifetime of the plan, with 78ha of land to be safeguarded for general industrial development. Further detail is also provided in relation to the Tees Enterprise Zone sites, which is welcomed. However, the overall intentions for future housing development are not referred to in Outcome 2 or the supporting text. The inclusion of the overall housing target within the Plan Priorities would help to provide a clearer indication of the development aspirations that will be forming a key objective of the plan. Again, with regards to Outcome 3, whilst the intention to improve transport and access can be supported, it is relatively vague and it is not clear what the objectives are without sifting through the supporting text. However, it is noted that paragraph 1.104 recognises the need to manage the pattern of growth and ensure that major development is directed to the most sustainably accessible locations which can 'make best use of public transport and other sustainable transport options', which the Agency supports. Paragraph 1.105 also states that the Plan outlines a number of measures and improvements to sustainable transport provisions, with the aim of improving sustainable accessibility within the borough and beyond. Again, this can be supported, but would provide a clearer picture of the intentions for improving transport and access if presented under Outcome 3. The Agency welcomes the recognition of the importance of ensuring a coordinated and proactive approach to the planning of critical infrastructure is followed and as recognised in paragraph 1.110, this is particularly pertinent for new or improved infrastructure which may be required to support the delivery of strategic sites that are critical to the delivery of the overall strategy. The intentions for the Infrastructure Delivery Plan defined in paragraph 1.110 are therefore supported. The Agency is also supportive of paragraphs 1.123-127 which detail the requirements and intentions for transport infrastructure and the evidence base used to support the implementation of improvement schemes. The priority areas identified in paragraph 1.126 which include 'tackling capacity pinch points on the strategic highway network where new development is being delayed or prevented; improving reliability of the highway network through the Network Management Strategy; and deliver of the Tees Valley Bus Network Improvement Programme', are particularly supported and therefore as mentioned above, it is considered that Outcome 3 would benefit from including reference to these priorities. Finally, paragraph 1.127 identifies that a study has been commissioned to assess the impact of the Plan's development proposals on the transport network and to identify and evaluate potential mitigation measures which may be required. As this report was not available at the time of preparing these comments, no detailed consideration can be given as to whether this study appropriately considers the implications of Plan's proposals on the SRN. The Agency's interest in the study relates to the following issues:

- does the study also consider the impact of proposals on the operation of the Strategic Road Network (SRN)?
- does the study relate to all development proposals or simply the housing elements (which are referred to in the title of the study in the footnote to page 34)?
- does the study appropriately reflect the development proposals of both authorities latest Local Plan documents?
- does the study identify any improvement measures that are ultimately then identified in the Local Plan policies / IDP and does the study justify that these measures are able to provide the level of required support? Whilst the opportunity to review the Model Assessment Report would assist with addressing these issues, it should be noted that the Agency has initiated a Strategic Road

Officer response:

General support of the Plan's vision and aspirations to guide development towards sustainable locations, supported by a comprehensive infrastructure network is noted. Vision will be updated to include the need to manage travel demand, reduce congestion and ensure that the transport network operates efficiently and is capable of supporting the Plan's growth aspirations. Reference will also be added to delivering sustainable transport improvements. General support of outcomes noted. The priorities listed were are from the Council's Corporate 'Our Plan' 2013-2018. The supporting text explains how the Local Plan will deliver outcomes through the Local Plan. The Plan's Implementation and Monitoring Framework has been updated to link policies to overarching outcomes. Intentions for future housing development and housing target are covered in the relevant policies and it is not considered necessary to repeat these in outcome 2. Similarly it is not considered necessary to update outcome 3. Support of the intentions for the Infrastructure Delivery Plan noted and support of paragraphs 1.123-127. The study considers the impact of the proposals within the Local Plan on the operation of the Strategic Road Network and considers all strategic development, such as economic development and not only housing. Where the study has identified improvement measures to facilitate development this is included within relevant plan policies.

INTRODUCTION

Infrastructure study looking specifically at the combined impacts of both Redcar & Cleveland and Middlesbrough's emerging Local Plans. As part of this work the Agency will review the report, utilising the information within the study to inform the development of an evidence base to identify the implications of the development proposals on the Strategic Road Network, along with any measures that may be required to support the Plan's development proposals. Throughout this process, it will be the Agency's intention to continue to liaise with both authorities as the study is progressed.

Comment summary:

Para 2.17 What enforcement legislation will be in place to allow 'strictly controlled' to be a reality? Improving the energy efficiency of buildings is a key objective. Para 2.31 What enforcement will be in place to ensure that the measures taken in new builds will deliver the promises made? Can the same guidelines be used for extensions and refurbishments of existing properties/ Does this apply to all Local Authority and School building proposals? If the Building Regulations are supervised by independent Surveyors, can a report be expected for any work carried out on any building project? Policy SD5; Will it be Policy to ensure that Section 106, CIL or other planning policy implementation will benefit the immediate community where the development is taking place and not be utilised elsewhere?

Officer response:

"Strictly controlled" means directing development to sites within Development Limits. Only if there is a particular requirement to develop outwith development limits will development be allowed. This will be controlled through the development control process. In terms of energy efficiency standards, this will be enforced through the Building Regulations. If measures are required to mitigate the impact of development, the developer will be required to enter into a Section 106 agreement. This could include local on-site measures or strategic off-site measures. The Developer Contributions SPD, to be adopted in 2014 will set out further guidance for when the developer will be required to enter into an agreement. Mitigation measures can also be secured through planning agreements.

Comment summary:

Policy SD 2 states that Development will be directed to the most sustainable locations in the borough. In the settlement hierarchy, which will be used to guide development, Marske is identified as a conurbation. Overall this policy will aim to achieve a minimum of 60% of all new development taking place in the conurbation. Our client supports the Council's consideration of Marske as a conurbation. Development should be guided by an established settlement hierarchy that categorises each settlement based upon the level of services provided in each area. Marske is well served by local services and shops, and has employment opportunities at Longbeck Industrial Estate. Marske is also well served by public transport links, with two railway stations, linking the conurbation to Saltburn to the east and to Middlesbrough, Darlington to the west. The proposed development to the south of Marske would act as a natural extension to the conurbation, and would incorporate strong pedestrian links between the two locations. The proposal would act as a sustainable extension of Marske, a key objective of the NPPF.

Officer response:

Support noted.

DLP660

Full Name: Aidan Hamilton

Organisation: Bellway Homes (NE Division)

Agent Name: Neil Westwick

Agent Organisation:

Submission type: Letter

Agree with section?: No

Comment summary:

The sequential approach is unsound. The NPPF encourages the use of brownfield land but does not state that this is in preference to brownfield sites. Need to strike right balance between greenfield and brownfield sites to ensure delivery. Bellway suggest the sequential approach is deleted and a simple statement encouraging the use of brownfield sites is introduced. Strongly object to the locational strategy. The strategy will inhibit the delivery of housing delivery.

Officer response:

It is not considered that Policy SD2 is incompatible with the NPPF, and it is our aim to prioritise the re-use of previous developed land in order to ensure a sustainable pattern of development. The Plan also sets out a significant number of greenfield sites demonstrating that the policy does not, in itself, inhibit the development of sustainable greenfield sites.

DLP1272

Full Name: Mr Iain Pay

Organisation: Taylor Wimpey North Yorkshire

Agent Name: Mr Ian Lyle

Agent Organisation: England & Lyle

Submission type: E-Mail

Agree with section?: No

Comment summary:

Object to the locational strategy. It is broadly the same as in the LDF and the SA does not indicate why this is the preferred option. It does not provide sufficient flexibility to ensure housing needs can be met over the plan period. Heavily reliant on housing happening in conurbation where housing market is weak in large areas. A new approach should be adopted which looks at the sustainability and suitability of each settlement and an understanding of the differing needs and aspirations of the population and the Borough's housing market sub areas. Do not object to the principle of a settlement hierarchy, but Marske should not be included within the conurbation as it is physically separate from the main settlements in the urban area and has its own definable settlement character. Do not feel that development is directed to the most sustainable locations in the borough. Sustainable settlements such as Saltburn have very limited housing proposed. Additional housing allocations around the conurbation and some housing allocations in more settlements are required than currently proposed. As the largest and most sustainable settlement in the borough, more housing should be proposed in Redcar. More housing should be proposed at Saltburn. No housing is proposed at New Marske despite its size and sustainability credentials.

Officer response:

The locational strategy aims for at least 60% new development in the conurbation, to ensure a sustainable pattern of development and to broadly retain the existing population split between the urban and rural parts of the borough. The inclusion of Marske within the conurbation reflects the existing settlement hierarchy adopted through the LDF Core Strategy (2007), and no changes are being proposed through the Local Plan. All potential housing sites have been assessed and it is considered that the locational strategy can be achieved through the sites identified in the Local Plan. Other sites that have been rejected for allocation are considered to be less suitable.

Section/Policy**Policy SD 2****Locational Policy****DLP759****Full Name:** Mr Alan Hunter**Organisation:** English Heritage**Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

SD2 advises that regard needs to be had for others that safeguard land and/or buildings for nature and heritage conservation. Development, however, need not exclude or avoid heritage assets where repair, reuse and adaptation can remove them from risk, add value to a regeneration scheme and improve the appearance and character of the area.

Officer response:

The policy as worded requires that regard be had to other policies. This does not mean that development must exclude or avoid heritage assets.

DLP1319**Full Name:** Mr Steve Wharton**Organisation:** Northumbrian Water Ltd**Agent Name:** Kate McGill**Agent Organisation:** Nathaniel Lichfield & Partners**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

NWL objects to the sequential approach adopted in draft Policy SD2 to development sites, with brownfield sites within the limits of development to be considered ahead of all other sites. Paragraph 111 of NPPF encourages the effective use of land by re-using land that has been previously developed. This does not mean that the potential development of brownfield land should be prioritised. The consequence of such an approach will be to inhibit sustainable land coming forward, such as land north of Middlesbrough Road which is within the settlement boundary. This will in turn inevitably impact upon delivery figures. It is vitally important that all appropriate sources of supply are promoted equally to ensure sufficient delivery, especially in the early period of the plan.

Officer response:

It is not considered that Policy SD2 is incompatible with the NPPF, and it is our aim to prioritise the re-use of previous developed land in order to ensure a sustainable pattern of development. The Plan also sets out a significant number of greenfield sites demonstrating that the policy does not, in itself, inhibit the development of sustainable greenfield sites.

DLP572**Full Name:** Ann Higgins**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Disagree with the categorisation of Lazenby as a conurbation area, it is a Village and should be listed in the Villages category. Disagree with any proposed more housing development at Lazenby Village as it is now built down to the boundary of the Large Industrial Complex. Para 2.9 states that a conurbation area is where many local shops, local services and public transport links are: Lazenby is a village with NO PUBLIC TRANSPORT SERVICES AT ALL. NO OTHER SERVICES AND ONLY 1 SMALL VILLAGE SHOP. Development Limits - on Policies Map; States "to make clear distinction between the urban area and the countryside, to prevent urban sprawl. - The council in this local plan is creating uncontrolled urban sprawl with the proposed Marske large housing development.

Officer response:

The settlement hierarchy is the same as set out in the LDF Core Strategy (2007), which identified Lazenby as being within the conurbation. No changes are being proposed by the Local Plan. The Local Plan will establish the policy framework, including revised development limits, to distinguish between the urban area and the countryside and to ensure sufficient land is identified for development to meet identified needs.

Section/Policy**Policy SD 2****Locational Policy****DLP543****Full Name:** Gladedale Estates Ltd**Organisation:****Agent Name:** John Wyatt**Agent Organisation:** Signet Planning**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

It is not considered that the wording of Policy SD2, and, in particular, its reference to a sequential approach to development of sites to be in accordance with the provisions of the NPPF. Paragraph 111 of the NPPF emphasises that 'planning policies and decisions should encourage the effective use of land by reusing land that has been previously developed (brownfield land), provided that it is not of high environmental value'. In light of this while the NPPF encourages the reuse of previously developed land it does not prioritise its use over development on greenfield land. As such, reference to this sequential approach should be removed from Policy SD2.

Officer response:

It is not considered that Policy SD2 is incompatible with the NPPF, and it is our aim to prioritise the re-use of previous developed land in order to ensure a sustainable pattern of development. The Plan also sets out a significant number of greenfield sites demonstrating that the policy does not, in itself, inhibit the development of sustainable greenfield sites.

Policy SD2: It is difficult to see why Marske has been included with Redcar as part of the "Conurbation". It sits more naturally as an "East Cleveland Town" along with Saltburn. Our Parish Council is "Saltburn, Marske and New Marske", no mention of Redcar. Prior to 1974, Marske was included in Saltburn and Marske Urban District, not in the Borough of Redcar, those loyalties still exist.

Officer response:

The settlement hierarchy is the same as set out in the LDF Core Strategy (2007), which identified Marske as being within the conurbation. No changes are being proposed through the Local Plan

DLP428**Full Name:** Craig Barnes**Organisation:** Gladman**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Policy SD2 provides the framework to the Councils approach in meeting development needs. Gladman consider the approach to give priority to the development of previously developed land, and the limiting of development in the countryside to have no sound support in the Framework. Although para 111 of the Framework seeks to encourage the re-use of previously developed land, this should not be applied so that it constrains the delivery of sustainable and deliverable Greenfield sites from coming forward for development.

Officer response:

It is not considered that Policy SD2 is incompatible with the NPPF, and it is our aim to prioritise the re-use of previous developed land in order to ensure a sustainable pattern of development. The Plan also sets out a significant number of greenfield sites demonstrating that the policy does not, in itself, inhibit the development of sustainable greenfield sites.

Section/Policy**Policy SD 2****Locational Policy****DLP518****Full Name:** Matthew Good**Organisation:** Home Builders Federation Ltd**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Policy SD2 is not considered to be consistent with the NPPF and therefore in its current format it is considered unsound. The policy identifies a sequential approach to development sites requiring brownfield sites within the development limits of the borough to be considered first. Paragraph 111 of the NPPF seeks to encourage the re-use of previously developed land, it does not prioritise such land. The NPPF clearly identifies the importance of housing growth and seeks to boost significantly (paragraph 47) its delivery. To ensure this is achieved it is important that the plan provides a balanced portfolio of sites which can be delivered over the plan period. The consequences of the proposed sequential approach in policy SD2 will be to inhibit sustainable greenfield sites from being brought forward this in turn will inevitably impact upon plan delivery. Given that the Council has under-performed against its previous plan requirement and has a residual shortfall of 1,062 against its current housing requirement, as identified by the November 2012 Annual Monitoring Report, it is essential that it seeks to promote the growth of all sustainable sites both greenfield and previously developed early in the plan period. It is therefore recommended that Policy SD2 be amended by deletion of the sequential approach and, if justified by viability evidence that previously developed sites could be brought forward within the plan period, be replaced by a statement to encourage the re-use of previously developed land.

Officer response:

It is not considered that Policy SD2 is incompatible with the NPPF, and it is our aim to prioritise the re-use of previous developed land in order to ensure a sustainable pattern of development. The Plan also sets out a significant number of greenfield sites demonstrating that the policy does not, in itself, inhibit the development of sustainable greenfield sites.

DLP738**Full Name:** Valerie Halton**Organisation:** Conservative Group**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

We object to the change from 70% urban : 30% rural development in housing, to 60% : 40%, implemented without consultation. The reason given for this, by an Officer, is that the developers do not want to build in the urban conurbation, nor do they want to build the smaller, less expensive houses that are needed, they want to build more expensive, larger ones in our rural areas. Acceding to the demands of the developers and not accounting for the needs of the population is unacceptable and will fundamentally change the character of the Borough. In all areas, the need is for smaller one person homes, to accommodate the increasing single and older population, as stated in 6.6, but thereafter ignored.

Officer response:

The locational strategy aims to ensure that at least 60% of new development is located in the conurbation. It is recognised that is lower than the previous aim of the LDF Core Strategy; however, it will ensure that the balance of development broadly reflects the existing population split, retaining a sustainable pattern of development whilst remaining viable and, therefore, compliant with the NPPF.

DLP1107**Full Name:** Mr Russell Moxham**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Marske has been included as part of the conurbation and housing at Marske included in the draft Local Plan following representations from Knight Frank on behalf of the West Midland Pensions Fund. Residents views haven't been taken into account. Development is being proposed on greenfield rather than brownfield land. The distinctive character of Marske is recognised in the DLP so why does it seek to destroy this character.

Officer response:

Marske is included within the conurbation within the existing policy framework set out in LDF Core Strategy (2007) and no changes to this are being proposed through the Local Plan. A large number of housing sites have been assessed and it is considered that the most appropriate and sustainable package of sites for meeting our identified needs is being proposed through the Local Plan.

NWL objects to the sequential approach adopted in draft Policy SD2 to development sites, with brownfield sites within the limits of development to be considered ahead of all other sites. This approach is not consistent with Paragraph 111 of NPPF encourages the effective use of land by reusing land that has been previously developed. NWL therefore request that the sequential approach is deleted from Policy SD2 and replaced by a simple statement encouraging the re-use of brownfield sites.

Officer response:

We do not agree that the sequential approach set out in Policy SD2 is inconsistent with the NPPF, and will continue to prioritise the redevelopment of previously developed land within development limits.

Section/Policy**Policy SD 2****Locational Policy****DLP1226****Full Name:** Neil Douglas**Organisation:** RSPB**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Terminology used in relation to adverse effects on internationally designated sites varies between "significant effects" and "adverse effects" and "significant adverse impacts". The text needs to properly reflect the requirements of the Conservation of Habitats and Species Regulations 2010 (as amended), referring to "no adverse effects" (i.e. delete the word "significant"). Provision for the need for Appropriate Assessment for all development likely to have an adverse effect on a Natura 2000 site within Policy SD 2 is supported. This should be expanded to include that: "An Appropriate Assessment will be required for all development that, either alone, or in combination with other plans or developments, is likely to have an adverse effect on a Natura 2000 site." Please note that applying a blanket requirement for Appropriate Assessment to plan policies will simply defer any consideration of the viability of development allocations to the planning proposal stage and could lead to wasted resources being put into the preparation and submission of unviable applications, or lack of due consideration being given to the combined effects on Natura 2000 sites at the individual application stage. This approach can lead to serious doubts over the deliverability of the allocations and thus the soundness of the overall plan. At the scoping stage of this plan, the RSPB recommended investing in further data and evidence gathering to make informed and evidence-led decisions in the HRA: we are disappointed to note that the Council has not acted upon this recommendation. It should be noted that identifying suitable strategic mitigation ahead of allocating development land could address future issues with securing suitable mitigation land and support development within the borough. We recommend that a strategic masterplan for the conservation and enhancement of biodiversity is produced: this should include assessment of biodiversity assets within the borough and identification of appropriate management measures, a Recreation Management Plan and any other strategic mitigation considered necessary to ensure no adverse effects Natura 2000 sites and other biodiversity assets. This could be produced working with an appropriate nature conservation body. It is important to note that in order for mitigation for adverse effects on a Natura 2000 site to be considered effective it must be secured for the duration of the effects being mitigated for.

Comment summary:

Bellway considers that the sequential approach to development sites outlined Policy SD2 does not accord with the NPPF and is therefore unsound. The policy identifies a sequential approach to developments sites, with brownfield sites within the limits of development to be considered ahead of all other sites. Whilst paragraph 111 of the NPPF encourages the re-use of previously developed land, it does not state that this is in preference to greenfield sites. The consequence of such an approach will be to inhibit sustainable greenfield sites which will in turn inevitably impact upon delivery. Paragraph 47 of the NPPF clearly identifies the importance of housing growth and seeks to boost its delivery significantly. There is therefore a need to strike a balance between the delivery of brown and greenfield sites over the plan period. Given that the Council has under-performed against its previous plan requirement over a number of years and has a residual shortfall against its current housing requirement. it is essential that all sustainable sites are promoted equally to ensure sufficient delivery, especially in the early period of the plan. Accordingly, Bellway requests that the sequential approach be deleted from Policy SD2 and replaced by a simple statement encouraging the re-use of brownfield sites. Furthermore, Bellway wishes to strongly object to section (e) of Policy SD2 which aims to locate a minimum of 60% of all new development taking place within the conurbation with the remaining 40% located in rural areas, focused around Guisborough and other East Cleveland towns. The locational strategy, which currently forms part of Policy CS2 in the adopted Core Strategy (2007), was formed pre-'credit crunch' in a very different economic and national planning policy context than exists now. It had a sequential regeneration focus, which, even at that time of adoption, was aspirational and dependent on the availability of public and private funding and the housing market improving to deliver values that rendered regeneration schemes viable. It is the view of Bellway that section (e) is neither justified nor is it deliverable and will act in much the same way as the sequential approach to brownfield sites mentioned previously; inhibiting sustainable sites from coming forwards just because they are not located within the identified areas. Bellway therefore strongly urges the Council to delete section (e) of this policy.

Officer response:

It is not considered that Policy SD2 is incompatible with the NPPF, and it is our aim to prioritise the re-use of previous developed land in order to ensure a sustainable pattern of development. The Plan also sets out a significant number of greenfield sites demonstrating that the policy does not, in itself, inhibit the development of sustainable greenfield sites. The locational strategy aims for at least 60% new development in the conurbation, to ensure a sustainable pattern of development and to broadly retain the existing population split between the urban and rural parts of the borough. Comment summary:

I have great concerns regarding the sections of the plan relating to the development of new housing sites across the borough. I am initially confused by the village of Marske being placed in the 'conurbation' area of the borough- in 'Policy SD1' as when referred to in the document previously it is as part of 'smaller towns and villages, including Marske, Saltburn, Brotton, Loftus and Skelton' Marske is not a vast urban area but a small village as previously described and should therefore not have been included in the 'conurbation area'. The sudden inclusion of Marske as part of the 'conurbation' appears to be to justify excessive development which would be outside of the current development limits and does not 'deliver rural development that is of an appropriate scale to the settlement in which it takes place' as quoted just below in the table Policy SD1.

Officer response:

Policy SD2 sets out the settlement hierarchy, which includes Marske within the conurbation. This is a continuation of existing policy that was adopted by the Council through the LDF Core Strategy in 2007. Development limits are being reviewed across the borough in order to accommodate sufficient development to meet our identified needs.

Comment summary:

The Agency is supportive of the policy's approach to directing development to the most sustainable locations in the borough, particularly focusing development in conurbations (in accordance with the settlement hierarchy) where existing employment, facilities and transport facilities will already exist. This approach will help to encourage a sustainable pattern of development and help to reduce the need to travel, particularly by private car. The policy identifies that only limited development of an appropriate scale will be allowed within the service villages and villages. The Agency is generally supportive of this controlled approach, however, further comment is provided in the site specific policies (Policies H3.1 to H3.33) in relation to the scale of development proposed within each proposed site. Whilst supportive of the spatial hierarchy outlined within the policy, the Agency is also supportive of utilising the sequential approach for locating development and particularly welcomes prioritising centrally located previously developed sites, which tend to be more sustainably accessible than out of centre and greenfield sites. In relation to greenfield land outside of development limits, the Agency has provided further comment within Policy SD3.

Officer response:

Support noted.

This includes Marske as part of the urban conurbation. Though Marske is a large village (already with a number of modern estates, but seemingly due to get a lot, lot, bigger), it should be seen as a transition from the conurbation to rural to maintain a distinct character thus adding to the diversity of the area. After all, Guisborough is not included within conurbation, but it also blessed with many modern estates, with many more promised.

Officer response:

Marske is included within the conurbation within the existing policy framework set out in LDF Core Strategy (2007), with Guisborough being the 'rural service centre', and no changes to this are being proposed through the Local Plan.

Section/Policy**Policy SD 2****Locational Policy****DLP638****Full Name:** Mr Ben Stephenson**Organisation:** Persimmon Homes
Teesside**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Persimmon Homes support the HBF view that Policy SD2 is not considered to be consistent with the NPPF and therefore in its current format considered unsound. Paragraph 111 of the NPPF seeks to encourage the re-use of previously developed land but does not prioritise such land over other land in the way the sequential approach proposed by Redcar & Cleveland Borough Council aims to do. Considering paragraph 47 of the NPPF requires Local Planning Authorities to 'significantly boost' housing supply a sequential approach such as the one proposed may inhibit sustainable greenfield sites from being brought forward and ultimately hinder the delivery of the plan. Persimmon Homes therefore proposes amending to the policy by deleting the sequential approach and replacing it with a policy encouraging the re-use of brownfield sites. It should make clear however that this should not be prioritised over sustainable greenfield sites in order not to jeopardise the delivery of the plan.

Officer response:

It is not considered that Policy SD2 is incompatible with the NPPF, and it is our aim to prioritise the re-use of previous developed land in order to ensure a sustainable pattern of development. The Plan also sets out a significant number of greenfield sites demonstrating that the policy does not, in itself, inhibit the development of sustainable greenfield sites.

DLP1257**Full Name:** England & Lyle
(private clients)**Organisation:****Agent Name:** Mr Ian Lyle**Agent Organisation:** England & Lyle**Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

We support the inclusion of Normanby as one of the 'settlements' within the defined 'Conurbation'. The Conurbation should be the focus for the largest proportion of future new housing development in the Borough, as it represents a sustainable location for new development. We would however object to the inclusion of Marske within the conurbation. It is neither physically nor functionally part of the conurbation but a free-standing settlement with its own character. It does not form part of the conurbation and should therefore be excluded. As such the scale of development proposed through Policies LS2 and H3 is disproportionately large and unsound.

Officer response:

The settlement hierarchy is the same as set out in the LDF Core Strategy (2007) and no changes to this are being proposed through the Local Plan.

DLP421**Full Name:** James Reid**Organisation:** Barratt Developments Plc**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

In its current context, Policy SD3 will perform the role of a Green Belt policy if adopted. It shall not only restrain the growth of the borough's urban areas but potentially restrict the delivery of sustainable greenfield sites on the edge of settlement boundaries. The NPPF requires local plans to be flexible and responsive to change, therefore it is essential RCC builds sufficient buffer into its strategy to protect against market fail and site non-performance. Whilst it is noted that Policy H1 provides 10% land allocations beyond the minimum housing target, this will not provide sufficient sites beyond the plan period and the proposed development limits would require alteration again. BDW suggests the Council consider identifying safeguarded land within an amended development boundary to accommodate future needs after the plan period. The inclusion of safeguarded land would also provide the plan with greater flexibility should additional land be required during the plan period.

Officer response:

The plan allocates sufficient sites to meet objectively assessed housing needs, including a buffer of over 10% to guard against under-delivery. The sites have been subject to viability testing and only sites, which are considered to be deliverable have been included within the plan. Furthermore, Policy H1 also indicates that if it becomes apparent that a five-year supply cannot be evidenced, the Council will work with landowners and the development industry in seeking to address the shortfall.

(private clients)**Organisation:****Agent Name:** Mr Ian Lyle**Agent Organisation:** England & Lyle**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Would like to see the development limits boundary amended to include land at Woodcock Wood as inside development limits. This would support the sites inclusion in the plan as a proposed housing allocation.

Officer response:

The inclusion of the site within development limits, and as a proposed housing allocation, is not supported. The comparable site at Longbank Farm is preferred to Woodcock Wood (subject to achieving sensitive partial development and all other stated conditions in Policy H3.6), as it is well related to the existing residential area and is less environmentally significant.

DLP955**Full Name:** G M Collins**Organisation:****Agent Name:** GVA Grimley Ltd.**Agent Organisation:** GVA**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Would like to see land at High Farm included as a housing allocation and the boundary for development limits amended to include the land inside development limits to facilitate this.

Officer response:

The site was not considered as a potential allocation in the draft plan as it is currently the subject of an extant planning consent to provide an extensive area of community woodland as part of the current High Farm development. Notwithstanding numerical housing requirements (which have been assessed separately under Policy H1), the Council does not support this proposal for the following reasons: the development of 340 dwellings, in addition to the current consent for over 200 currently would significantly increase the level of development at this location and could undermine housing delivery on more sustainable and acceptable sites elsewhere in the north of Greater Eston, including the strategic allocation at Low Grange farm and the former Redcar & Cleveland Town Hall site; the site is not in an area of higher value housing and, as demonstrated by the current permission, it is questionable whether it could be established as an 'executive housing' location; and other, more suitable sites in higher value locations have been identified which will contribute significantly to the supply of detached and 'executive' properties in the borough.

Section/Policy**Policy SD 3****Development Limits****DLP1227****Full Name:** Neil Douglas**Organisation:** RSPB**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

The RSPB welcome the consideration of potential effects on Natura 2000 sites within 15km of the authority boundary in the HRA, but there is insufficient consideration of this in the Draft Local Plan document, or supporting maps. This is of particular concern for areas of the Teesmouth and Cleveland Coast SPA, where the North Tees mudflats section is within approximately 0.2km of planned development limits. The development limits are also to the boundary of the SPA at Bran Sands, where any development is likely to result in adverse effects on the SPA. Developing to the limits of the SPA would be likely to result in direct disturbance of adjacent areas, affecting site integrity. It is important that Redcar and Cleveland Borough Council effectively cooperate with Hartlepool Borough Council, Stockton-on-Tees Borough Council, Middlesbrough Borough Council and North Yorkshire County Council to plan for cross-boundary effects on Natura 2000 sites which span the borough boundary. It is of particular importance to plan for avoidance of cumulative effects of development in one or more boroughs on the protected species of the Teesmouth and Cleveland Coast SPA and Ramsar. It should be noted that there is a serious lack of capacity in the vicinity of the SPA to provide alternative habitat as mitigation. Where Policy SD 3 is likely to adversely affect Natura 2000 sites, it should include explicit reference to mitigation plans. Please see Policy SD2 comments. It is recommended that Policy SD3, part (k), includes the phrase 'redevelopment of previously developed land, provided that it is not of high environmental value.' Similar mention should occur in Paragraph 2.19.

Officer response:

No changes are being proposed to development limits near to the SPA. Policy N4 gives priority to protecting internationally important sites, including the Teesmouth and Cleveland Coast Special Protection Area/Ramsar and European Marine Sites, and the North York Moors Special Protection Area and Special Area of Conservation. The policy will be amended to indicate that the redevelopment of other previously developed land and buildings outside development limits will only be acceptable provided that the site is not of high environmental value.

DLP1273**Full Name:** Mr Iain Pay**Organisation:** Taylor Wimpey North Yorkshire**Agent Name:** Mr Ian Lyle**Agent Organisation:** England & Lyle**Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Welcome the review to development limits. The Council should put in place flexible criteria based policy mechanism to give positive consideration to development proposals on sustainable but unallocated sites outside of development limits in circumstances where it can be demonstrated that the actual supply of housing land is falling well short of meeting the Borough's objectively assessed housing requirements.

Officer response:

The plan allocates sufficient sites to meet objectively assessed housing needs, including a buffer of over 10% to guard against under-delivery. The sites have been subject to viability testing and only sites, which are considered to be deliverable have been included within the plan. Furthermore, Policy H1 also indicates that if it becomes apparent that a five-year supply cannot be evidenced, the Council will work with landowners and the development industry in seeking to address the shortfall.

We support the objective of Policy SD3 which is to control development beyond the development limits. However, we consider that the second paragraph of this policy is not necessary to achieve this objective and should be removed.

Officer response:

Comment noted. No changes proposed. The second paragraph is considered necessary to ensure that the policy is worded positively and provides clarity on how development proposals inside of development limits will be assessed.

Section/Policy**Policy SD 3****Development Limits****DLP519****Full Name:** Matthew Good**Organisation:** Home Builders Federation Ltd**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

The policy effectively acts like a Green Belt policy by restraining growth outside of the development limits. In including such a policy it is important that the Council provides sufficient development sites to enable delivery of the plan and provides sufficient flexibility if one or a number of the identified sites fail to deliver the quantum or rate of growth anticipated. Whilst it is noted that Policy H1 provides flexibility, in allowing for development of the plan requirement plus a further 10%, this will not provide sufficient sites beyond the plan period. It is therefore recommended that the Council consider identifying safeguarded land, within an amended development limit boundary, to accommodate future development needs. Such safeguarded land could be released at plan review. The plan as currently written would require further amendments to the development limits boundaries at plan review. The inclusion of safeguarded land will provide greater certainty over the delivery of future requirements. It will also provide the plan with greater flexibility should additional development land be required before the end of the plan period.

Officer response:

The plan allocates sufficient sites to meet objectively assessed housing needs, including a buffer of over 10% to guard against under-delivery. The sites have been subject to viability testing and only sites, which are considered to be deliverable have been included within the plan. Furthermore, Policy H1 also indicates that if it becomes apparent that a five-year supply cannot be evidenced, the Council will work with landowners and the development industry in seeking to address the shortfall.

DLP877**Full Name:** Michael Hoult**Organisation:** Highways Agency**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Whilst the Agency welcomes the intention to prioritise development in locations within the development limits identified on the Policies Map, as a means of guiding development towards the most sustainable locations, it is acknowledged that in some circumstances this may not be feasible or viable. Whilst the criteria for development beyond the development limits restricts proposals to what would appear to be relatively small scale development and require such proposals to be based on the redevelopment of previously developed land, this does not necessarily mean that such locations would be sustainably accessible. Therefore, the Agency suggests including a requirement to ensure that such locations are, or can be made to be sustainably accessible and for mitigation to be provided where the impact of such development would be detrimental to the operation of the transport network.

Officer response:

The policy seeks to restrict development outside of development to meeting rural needs, or other small-scale redevelopment of previously developed land. It is therefore anticipated that any development would be limited in its scale and impacts upon the highways network. Policy SD4 already requires consideration to be given to the potential impacts of such development on the highways network and will be a material consideration in the determination of any planning applications.

DLP380**Full Name:****Organisation:** West Midlands Metropolitan Authority Pension Fund**Agent Name:** David Staniland**Agent Organisation:** Knight Frank LLP**Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Our client supports the inclusion of their site within the development limits. Beyond the development limits our client considers that the Council's approach to development should be made more flexible in order to be able to respond to future market changes. The policy criteria should not restrict or inhibit future development where there is a clear need.

Officer response:

The plan allocates sufficient sites to meet objectively assessed housing needs, including a buffer of over 10% to guard against under-delivery. The sites have been subject to viability testing and only sites, which are considered to be deliverable have been included within the plan. Furthermore, Policy H1 also indicates that if it becomes apparent that a five-year supply cannot be evidenced, the Council will work with landowners and the development industry in seeking to address the shortfall.

Section/Policy**Policy SD 3****Development Limits****DLP127****Full Name:** James Copeland**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

We would welcome the reassurance that the needs to construct or alter existing structures to a design that meets both environment and animal welfare standards have been encapsulated within this policy. While considerations for rural workers dwelling is outlined in the rural exceptions policy. Clarity is requested as to the criteria used to calculate the size commensurate with the established functional requirement. How will limits be made upon the size and design of the property and will any development, take into account the applicants current and future need? Many existing building are not suitable for the adoption of zero or low carbon technologies, or existing policies prevent their adoption. We would have significant concern should any such policy be implemented that disadvantage the rural communities.

Officer response:

The policy allows suitably scaled extensions and the conversion or reuse of a suitable existing building. Furthermore, Policy ED8 already supports the expansion of rural based enterprises. The scale and design of any proposal will be assessed on its merits as part of any planning application. Policy SD4 promotes the use sustainable design and construction techniques as part of any new development. Consideration will be given to whether their inclusion is suitable as part of any planning application.

DLP1135**Full Name:** Kate Wheeler**Organisation:** Natural England**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Policy SD3: Development Limits, seeks to ensure development is restricted to sites around the conurbation and key rural towns and villages. Similar to SD2, this policy prioritises development in developed locations. Whilst Natural England welcome this approach to development as it locates development in proximity to existing infrastructure and services, the HRA highlights a potential issue in the case of Redcar, given the Natural 2000 site. Furthermore, the policy sets criteria for development beyond development limits; this could potentially include land with possible effects upon Natura 2000 sites.

Officer response:

There are no significant changes proposed to development limits in close proximity to Natura 2000 sites. Consideration of the potential impacts of the plan upon Natura 2000 sites has been undertaken as part of the HRA and the impacts are considered to be acceptable. Furthermore, Policy H4 seeks to protect Natura 2000 sites and will be a material planning consideration as part of any relevant planning applications.

The wording in Policy SD4(c) will be changed to ensure all heritage assets are protected. The wording in Policy SD4(q) will be amended to include reference to heritage assets.

Section/Policy**Policy SD 4****General Development Principles****DLP544****Full Name:** Gladedale Estates Ltd**Organisation:****Agent Name:** John Wyatt**Agent Organisation:** Signet Planning**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Policy SD4 requires major developments to reduce their predicted energy requirement by a minimum of 10% with accompanying paragraph 2.31 of the plan requiring that this 10% requirement is over and above the minimum requirements of building regulations. In the context of proposed forthcoming changes to the building regulations and the Governments push towards zero carbon it is considered unreasonable to impose further onerous requirements on developers with a real prospect that additional targets will have a genuine impact on the viability of potential housing sites. In light of this it is recommended that Criteria k of Policy SD4 be amended to simply encourage greater efficiency than the building regulations but not extended to make it a mandatory requirement.

Officer response:

Note the concerns regarding the impact on development viability of introducing a requirement to reduce energy consumption by 10% over and above the Building Regulations, as was the requirement in the Core Strategy. Following further research into the Government's recent consultation on Next Steps to Zero Carbon Homes and the intention to move towards zero carbon homes by 2016, it is accepted that this policy requirement may render some developments unviable. DLP1228**Full Name:** Neil Douglas**Organisation:** RSPB**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Distinctions should be made between the hierarchy of international, national and locally designated sites, so that protection is commensurate with their status and gives appropriate weight to their importance and the contribution that they make to wider ecological networks. Where Policy SD4, part (c), refers to the unacceptable loss or significant adverse impact on environmental assets, this should not be limited to those considered important to the quality of the local environment and should make distinctions between the hierarchy of international, national and local designations. It is recommended that this policy makes a distinction between the requirements to protect internationally, nationally and locally important environmental assets and provides for their enhancement. The RSPB recommends that a general development principle is to incorporate biodiversity enhancement measures, to provide net gains where possible, similar to the explicit policy to include an artistic element, but not limited to major development.

Officer response:

Agree that protecting environmental assets should not be limited to those considered important to the quality of the local environment only but should include all environmental assets. Change policy to protect all environmental assets. Agree that the policy could be improved by making a distinction between international, national and locally important assets. The policy will be changed to make distinction between these assets.

DLP1210**Full Name:****Organisation:** The Gisborough Estate**Agent Name:** Mr Rob Close**Agent Organisation:** Strutt & Parker**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

The wording of Policy SD4 k) is not justified or in accordance with the NPPF, which notes that developments identified in plans should not be subject to such a scale of obligations and policy burdens that their ability to be developed viably is threatened. Part u) of the policy provides further guidance on this matter, noting that where it is not possible to achieve a 10% energy consumption reduction, due to site specific constraints, then it will be necessary to contribute to a Carbon Management Fund which will be invested in off-site renewable energy efficiency projects within the borough. We strongly disagree with this approach. Whilst we acknowledge the importance of encouraging energy efficient developments, we consider that the policy as currently worded could have a significant impact on the viability of projects coming forward and has the potential to stifle development. In the absence of evidence to support the 10% policy, we suggest reference to the 10% target (i.e. the last sentence under Policy SD4 k) is deleted. We also consider that bullet point u) should be amended as follows: U) 'a Design and Access Statement will be required for all major developments. The level of detail will be dependent on the scale and nature of the development. The Design and Access Statement should outline the measures that have been incorporated to reduce energy consumption and demand'.

Officer response:

Note the concerns regarding the impact on development viability of introducing a requirement to reduce energy consumption by 10% over and above the Building Regulations, as was the requirement in the Core Strategy. Following further research into the Government's recent consultation on Next Steps to Zero Carbon Homes and the intention to move towards zero carbon homes by 2016, it is accepted that this policy requirement may render some developments unviable. Comment summary:

The council should consider the recommendations from the Northumbria River Basin Management Plan and work these into the Plan. The Plan gives insufficient regard to the aims and requirements of the Water Framework Directive (WFD). The WFD is mentioned in the draft Local Plan under section 2.36. However, this omits reference to the need to maintain and enhance the biodiversity and habitat of watercourses through protecting or restoring natural channel morphology. Planning conditions or agreements should include mitigation measures, both within and near to any development proposal. Mitigation measures may include but are not limited to: easements for fish passages; otter passes under bridges; de-culverting; naturalisation of channels and habitat improvements. It is recommended that the Local Plan includes a section which describes how the council will minimise the impact of current and future minewater pollution associated with development. Consideration should be given to the identification of Coastal Change Management Areas (CCMA). As part of the England Biodiversity Strategy 2020, all opportunities should be taken to increase the area of priority habitats under this strategy such as the delivery of new wetlands. The Environment Agency supports the approach which seeks to provide 'net gains' for biodiversity. However, further information is required in relation to how these net gains will be measured. New developments should also be encouraged to undertake some wider environmental improvements in the borough such as habitat creation or regeneration and improved accessibility and connectivity between locations of interest. The outcomes of the Water Cycle Study should be taken into consideration. Paragraph 2.24 should be updated to reflect that land contamination issues should be considered in all cases where the current or previous use of the site or adjoining land is potentially contaminated and that the approach adopted in doing this should follow good practice as outlined in The model procedures for the Management of Land Contamination CLR 11 and Groundwater Protection: Principals and Practice (GP3). This should include a preliminary risk assessment; a site investigation; generic quantitative risk assessment; detailed quantitative risk assessments; options appraisal and remediation as appropriate on a site to site basis. Welcome references to protecting and improving water quality and water resources.

Officer response:

The Northumbria River Basin Management Plan objectives have been taken into account in developing the Plan. This has included assessing the suitability of development sites and initiatives to reduce water usage and water pollution. However, the objectives will be reviewed and changes will be made where required. Section 2.36 will be amended to add reference to the need to maintain and enhance the biodiversity and habitat of watercourses. The need to include mitigation measures in planning agreements is noted. Text will be added to the policy to highlight the issue with minewater pollution associated with development. Consideration has been given to the need for CCMA's. It was concluded that none are required along our coastline. The Local Plan already supports the creation of new wetlands. Note the support for net gains for biodiversity. Further text will be added to set out how these gains will be measured. Note the request to carry out wider environmental improvements in the borough such as habitat creation or regeneration and improved accessibility and connectivity between locations of interest. This is included within the Natural Environment Section, in particular Policy N1. The Outcomes of the Watercycle Study have been taken into account throughout the Plan. Paragraph 2.24 will be updated to reflect that land contamination issues should be considered in all cases where the current or previous use of the site or adjoining land is potentially contaminated and that the approach adopted in doing this should follow good practice as outlined in The model procedures for the Management of Land Contamination CLR 11 and Groundwater Protection: Principals and Practice (GP3). Comment summary:

Under part t of Policy SD4 it is anticipated that major developments will 'incorporate an artistic element' and this requirement should be clarified on the basis that some major developments will take place on Wilton International site where there is no public access or on highly industrialised areas such as the port where there will be appropriate limitations on access to certain areas for safety reasons. Art, as a medium, has numerous interpretations and the veracity of this label in respect of a particular 'installation' will depend entirely upon the audience. Is it anticipated that there is anticipated to be some form of 'offsetting', similar to biodiversity enhancement if there is restricted access to the actual development? Paragraph 2.28 gives an explanation that is more related to design than 'art'.

Officer response:

Note comment that some development sites are not accesible to the general public. Policy will be reworded to "major developments which are accessible to the general public".

In addition Bellway considers that bullet point u) should be amended as follows: u) a Design and Access Statement will be required for all major developments. The level of detail will be dependent on the scale and nature of the development. The Design and Access Statement should outline the measures that have been Incorporated to reduce energy consumption and demand.

Officer response:

Note the concerns regarding the impact on development viability of introducing a requirement to reduce energy consumption by 10% over and above the Building Regulations, as was the requirement in the Core Strategy. Following further research into the Government's recent consultation on Next Steps to Zero Carbon Homes and the intention to move towards zero carbon homes by 2016, it is accepted that this policy requirement may render some developments unviable. The policy will be amended to remove the requirement to reduce consumption by 10% over and above the Building Regulations but to instead include a requirement to encourage greater efficiency than the Building Regulations. Note the request for additional text for for the section on Design and Access Statements.

Comment summary:

NWL endorses the Council's aspiration to reduce the amount of energy generated by development, an important step towards the wider goal of tackling climate change. Nevertheless, NWL object to Policy SD4 u) as currently worded. The 10% minimum referred to in Policy SD4 k) is over and above what current building regulations require and, when combined the Government's zero carbon aims, will create substantial additional burdens for the industry which may lead to some development becoming unviable. This is particularly pertinent to sites such as land north of Middlesbrough Road where abnormal development costs can be expected. Without evidence to support the 10% policy, we suggest reference to the 10% target is deleted. We also consider that bullet point u) should be amended as suggested.

Officer response:

Note the concerns regarding the impact on development viability of introducing a requirement to reduce energy consumption by 10% over and above the Building Regulations, as was the requirement in the Core Strategy. Following further research into the Government's recent consultation on Next Steps to Zero Carbon Homes and the intention to move towards zero carbon homes by 2016, it is accepted that this policy requirement may render some developments unviable. Comment summary:

NWL welcomes the promotion of sustainable design and construction as a key element of new development, and in particular: the regard to be had to improving water efficiency; the need to take into account flood risk and water supply; and the need to manage surface water. NPPF requires Local Plans to develop policies to manage flood risk from all sources. Risk of flooding from sewers is increasing. Highlight deficiencies in how plan deals with water issues. Suggest the inclusion of policy solely focussed on flood risk and water management and and by to reference the current Defra consultation on the implementation of Schedule 3 of the Flood and Water Management Act 2010 on SuDS Approval Bodies as policies may need to drafted to incorporate the outcome of the consultation. Suggested wording for new policy.

Officer response:

The NPPF and the NPPF Technical Guidance as well as the SUDS National Guidance and the local SUDS guidance, which is currently being developed, provides or will provide, policy and guidance on flood risk and drainage systems. However, given the importance of ensuring new development is not from flooding or does not increase flood risk, a new standalone policy on flood risk and water management will be included within the Local Plan. The policy wording suggested will be taken into account when writing the new policy. A new policy will be included on flood risk and water resource management.

Section/Policy**Policy SD 4****General Development Principles**

DLP640**Full Name:** Mr Ben Stephenson**Organisation:** Persimmon Homes
Teesside**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Point 'K' of the policy SD4 General Development Principles requires all major developments to reduce their predicted energy requirement by a minimum of 10% over and above the prevailing Building Regulations. This issue with this policy lies in the fact that there is no subsequent policy or information relating to when this 10% renewable provision would make the site unviable. The policy states that when a 10% renewable energy provision is not possible a contribution towards a carbon management fund would be required. However, the document does not elaborate on this point for example explaining what this fund is, what it shall fund, how much will be sought and how the contribution shall be calculated. The need to fully understand the cumulative impacts of Local Plan policies and obligations is clearly set out in paragraphs 173-177 of the NPPF. Whilst it is encouraging that the council has undertaken a 'Whole Plan Viability Testing' report earlier in 2013, this report does not appear to fully consider the impact of policy SD4 or a number of the other policy requirements. Therefore the impact of this policy cannot be understood. It is therefore advised that part K of the policy be amended to simply encourage greater efficiency than the Building Regulations but not attempt to make this a mandatory requirement.

Officer response:

Note the concerns regarding the impact on development viability of introducing a requirement to reduce energy consumption by 10% over and above the Building Regulations, as was the requirement in the Core Strategy. Following further research into the Government's recent consultation on Next Steps to Zero Carbon Homes and the intention to move towards zero carbon homes by 2016, it is accepted that this policy requirement may render some developments unviable. DLP878**Full Name:** Michael Hoult**Organisation:** Highways Agency**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

The Agency is generally supportive of the policy and in particular 'criteria f', which seeks to ensure that development will only be permitted where a site has adequate infrastructure to support it. In addition the Agency is also supportive of 'criteria g.', which requires development proposals to support local facilities and transport networks, and 'criteria s.', which aims to ensure sufficient and appropriate levels of parking are provided to support a new development. The Agency is also particularly supportive of 'criteria v.', regarding the requirement for a Travel Plan to be provided for 'all strategic and significant development proposals that will generate large amounts of traffic and movement'. However, the Agency considers that this should be amended to also refer to the requirement for a Transport Assessment to be submitted to support all major development proposals. Notwithstanding the above support, the Agency considers the policy criteria could be further strengthened. The need to ensure development is sustainably accessible is generally recognised within the Plan, however it is considered that this should form a key criteria for this policy to ensure that it forms part of the assessment when determining the suitability of a site or location for new development. It is recommended that a new criteria should be added, which requires new development proposals to be sustainably accessible or capable of being made to be sustainably accessible through the provision of new or improved sustainable transport services or facilities. This would help to ensure that the traffic impacts of development proposals are mitigated and the need to travel by private car is reduced.

Officer response:

Note request to amend text to also refer to the requirement for a Transport Assessment to be submitted to support all major development proposals. The policy will be amended to also include a Transport Assessment. Note request to add a new criterion which requires new development proposals to be sustainably accessible or capable of being made to be sustainably accessible through the provision of new or improved sustainable transport services or facilities. A new criterion will be added to policy.

Section/Policy**Policy SD 4****General Development Principles**

DLP396**Full Name:** Emma Thornton**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

I wholly agree with the following points made in policy 'SD4' that developments should : 'not result in the unacceptable loss or significant adverse impact on important open spaces or environmental, built or heritage assets which are considered important to the quality of the local environment;' 'minimises the loss of best and most versatile agricultural land;' 'avoids locations that would put the environment, or human health or safety, at unacceptable risk;' 'has adequate infrastructure, services and community facilities to serve the development' But fail to see how the developments at Marske Inn Farm or Windy Hill Farm or a number of other developments on farmland and allotments in Guisborough meet these priorities? There is going to be a great loss of agricultural land in the borough if these developments are allowed to go ahead and a huge increase in traffic and flooding for the area. Moving on to section 2.32 and flooding - there has been an increase in floods devastating large parts of our communities in recent months and years including Marske and Guisborough- I am confused by how developing in areas which already have a drainage system under pressure and building over farmland which currently helps to drain water will not exacerbate the problem? Quote: 'New development should therefore avoid those areas which are most vulnerable to flooding where possible' ? this seems very contradictory.

Officer response:

Note general support for Policy. Note concern that developments at Marske Inn Farm and Windy Hill Farm and a number of other developments on farmland do not meet the requirements of policy. Windy Hill farm has been removed from the plan. The Council has undertaken an extensive search and assessment of land availability and the sites which have been selected are the most appropriate and sustainable locations available. The method used for selecting sites is set out in Policy H3. With regards to flood risk, the Local Plan has been informed by the Strategic Flood Risk Assessment and Surface Water Management Plans to ensure that new development is not located in areas at risk of flooding. New development in areas where there are currently capacity problems with the surface water drainage will be required to reduce surface water runoff from the existing situation. This means that new development will lead to a reduction in flood risk. A flood Risk assessment will also be undertaken by the developer, where required, at the time of submitting a planning application. An assessment of agricultural land has been undertaken. None of the sites allocated in the plan have been allocated on Grade 1 agricultural land, although the site to the south of Marske is on Grade 2 land. A traffic impact assessment has been undertaken for the sites allocated in the Local Plan. Although traffic will increase in certain areas, this is not expected to be a show stopper for any particular site. A transport assessment will be required for each development site. Enfield Chase development site is a former allotment site, however the site is no longer used for the provision of allotments.

Agree with section?: Yes

Comment summary:

The Agency is generally supportive of securing developer contributions through the use of planning obligations and is particularly supportive of the use of CIL to ensure contributions are collected towards the cost of new and improved transport infrastructure to mitigate against the adverse impacts created by development, to ensure that new developments are or can be made to be sustainably accessible and can be accommodated by existing infrastructure without affecting its efficiency or safety. As such, the Agency is particularly supportive of parts 'f', 'g' and 'h'. In addition, the Agency notes in paragraph 2.39, that the Council may introduce a levy to secure funds to pay for infrastructure projects that would be required to mitigate the cumulative impact of all development. Utilising CIL as a mechanism to fund strategic improvements and address cumulative impacts would be particularly supported by the Agency.

Officer response:

Note support for securing developer contributions through the use of planning obligations and CIL if introduced.

Comment summary:

Need to clearly set out what infrastructure developer contributions will fund and assess this through the Whole Plan Viability Testing report. It is unlikely that a Â£500 per unit cumulative cost will fund all infrastructure projects listed in the IDP. Given the significant list of infrastructure projects, current government austerity and the viability issues identified it appears unlikely the Council will be able to fund all of the projects identified. In accordance with the NPPF the IDP will therefore need to prioritise infrastructure based upon its deliverability and ability to positively contribute to economic growth. If CIL is adopted this should be the only tool for collecting funds to address the cumulative impacts of development on types of infrastructure.

Officer response:

The IDP will set out in detail what infrastructure is essential to deliver the Local Plan and how projects will be delivered. A number of projects within the IDP will be funded by infrastructure providers rather than developers. Where this is the case, this will be stated within the IDP. It is also the case that some of the projects listed are not critical to delivering the plan. The Whole Plan Viability Testing included a Â£500 per dwelling contribution for the majority of sites for which large infrastructure projects won't be required. Where the Council expect larger infrastructure projects to be delivered as part of development, the estimated level of contribution required has been included within the viability testing. It is noted that CIL should be the only tool for collecting funds if adopted by the Council.

Section/Policy**Policy SD 5****Developer Contributions****DLP423**

Full Name: James Reid
Organisation: Barratt Developments Plc
Agent Name:
Agent Organisation:
Submission type: E-Mail
Agree with section?: No

Comment summary:

Policy SD5 indicates that significant contributions will be sought from development to fund infrastructure projects within Redcar and Cleveland. We recognise a 'Planning Obligations SPD' shall be prepared in early 2014 but the current policy lacks clarity. It is unclear whether the Council intends to implement a Community Infrastructure Levy charge, which will have significant implications for the plan and in turn the viability of development. We suggest this should be developed alongside the Local Plan. As highlighted earlier, a nominal contribution of Â£500 per unit is used for s106/278 contributions within the viability study. It is unlikely that many of the projects outlined in the existing Infrastructure Delivery Plan (IDP) (September 2013) could be funded by such contributions. Furthermore, the viability study does not suggest a significantly higher contribution could be requested by RCC on most development sites. In accordance with the NPPF the IDP will therefore need to prioritise infrastructure based upon its deliverability and ability to positively contribute towards economic growth.

Officer response:

The Council does not intend to introduce a CIL until such time as development viability improves and it is appropriate to do so. The Whole Plan Viability Assessment used a average nominal contribution of Â£500 for the majority of developments. However, where sites were expected to fund large infrastructure projects, higher contribution amounts were used, around Â£3,000 per dwelling. The assessment still showed these sites to be viable with the higher levels of contributions. The IDP will set out which sites will be expected to contribute to essential infrastructure. Many of the infrastructure projects outlined will be funded by other sources rather than the development itself.

Comment summary:

'Policy SD5' the need for affordable housing - there is a lot of development planned in Marske and Guisborough - none of which appears to mention affordable housing. Earlier in the document 'A continued lack of access to mortgage finance and the requirement for home buyers to provide larger deposits means that many households are still unable to become owner-occupiers' and 'This is likely to grow even further over the next few years, as access to mortgage finance continues to be limited.' this appears to contradict the fact that 'aspirational' properties appear to be planned for Marske and Guisborough - who is going to buy these large, detached 'aspirational properties' if there is little finance available and an 'ageing population'?

Officer response:

Any development in Marske and Guisborough will need to comply with Policy H2 Type and Mix of Housing and Policy H4 Affordable Housing. These policies require new residential developments to provide a mix of housing types and sizes and on all new housing developments of 15 or more dwellings (gross), a minimum of 15% of the total number of dwellings on-site will need be provided as affordable housing. Also, for all housing developments below this threshold, a financial contribution by way of a commuted sum, equivalent to a 15% on-site affordable housing contribution, will be expected. These policy requirements will seek to ensure that local people who cannot afford to purchase a new home do have access to a new home either through shared ownership or social rent. Also note that that the Local Plan will be delivered over a period of 15 years and built out to meet the expected demand at the time.

DLP381**Full Name:****Organisation:** West Midlands
Metropolitan Authority
Pension Fund**Agent Name:** David Staniland**Agent Organisation:** Knight Frank LLP**Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Policy SD 5 indicates that the Council will seek to secure developer contributions in order to fund necessary infrastructure and other community benefits required as a consequence of development. Developer contributions will normally be secured through planning obligations. In the event that the Council adopts a Community Infrastructure Levy (CIL), certain developer contributions will be payable through this mechanism. The level of developer contribution will be commensurate with the scale and nature of the proposal. Although our client supports the necessity for developer contributions, these should not impact upon the viability of a site being developed. The deliverability of development is key and the policy should reflect the need for an appropriate viability assessment.

Officer response:

All planning obligations will be subject to a viability assessment to ensure sites are still deliverable. However, in some cases infrastructure may be required to mitigate the impact of the development and be essential for site delivery. Further guidance will be provided in the Planning Obligations SPD. A CIL will also be subject to a viability assessment.

DLP1243**Full Name:** Mr Bob Moodie**Organisation:** New Marske Residents Association**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

We would have liked you to have defined and provided guidance to protect the minimum separation/proximity distances between turbines and homes. We will no doubt see a proliferation of single turbines appearing all over the place and as government are looking towards local authorities and communities bringing forward proposals to build schemes of up to 10MW. Any proliferation of single turbines and or wind farms could really become a big issue for residents over visual damage and noise related aspects. This could lead to a detrimental affect regarding their general health and wellbeing, which could result in them suffering with stress and general health related issues.

Officer response:

Polciy SD6 seeks to ensure that renewable energy developments, including wind turbines, are located in suitable locations, however it is not considered appropriate to set a minimum seperation distances between wind turbines and homes. Appropriate seperation distances would vary on on a case-by-case basis as issues such as visual amenity and noise would be influenced by variables including scale, topography and landscape. National planning practice guidance (DCLG, 2014) states that local planning authorities should not rule out otherwise acceptable renewable energy developments through inflexible rules on buffer zones or separation distances.

DLP1229**Full Name:** Neil Douglas**Organisation:** RSPB**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

The RSPB objects to this policy due to its failure to recognise the potential for adverse effects on the Teesmouth and Cleveland Coast SPA, North York Moors SPA and other protected sites, through a presumption of support for schemes located in urban industrial areas, which include any within the Development Limits that could affect adjacent SPA sites. The HRA identifies that this policy fails to adequately explain that ecological considerations should inform judgements of landscape sensitivity and suggests inclusion of an Appropriate Assessment requirement as mitigation. The HRA does not address the strong support for renewable energy developments in urban areas. In rural areas, any recommendation that renewable energy proposals are located within designated Restoration Landscape Areas should be without prejudice to any statutory obligations to protect designated areas, including the Natura 2000 sites that could be affected by any proposals. This policy explicitly refers to the need to prohibit renewable energy development in areas protected by national landscape designations, or National Park. As a priority, Policy SD 6 should explicitly refer to the need to restrict renewable energy development that is likely to result in adverse effects on Natura 2000 sites, including those within, or near urban industrial areas. It is suggested that additional wording is included for Natura 2000 sites, that:"Renewable energy developments will not be allowed within, or where they are likely to have an adverse effect, alone, or in combination with other plans or projects, on designated ecological sites, unless they meet the exceptions criteria set out in Policy N4". Policy SD 6 should also include mitigation, in line with the recommendations made for Policy SD2. Object to Paragraph 2.47, ecological sensitivity should be a separate consideration from landscape.

Officer response:

Policy will be updated in line with recommendations to ensure that Natura 2000 sites are adequately protected. Wording at 2.47 will be updated to ensure ecological sensitivity is a separate consideration.

Section/Policy**Policy SD 6****Renewable Energy**

DLP302**Full Name:** Mr Robert Stockford**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

Banks Renewables Limited (BRL) welcome the rejection of policy SD6a that includes a minimum separation distance between wind turbines and residential properties. BRL objects to the rejection of Option SD6b, and believe it should be adopted. BRL strongly reject the assertion that there is currently insufficient evidence to identify specific sites or at least Broad Areas of Search in relation to onshore wind and consider this statement is incorrect. The Council have already undertaken an exercise to identify suitable areas for onshore wind in the Borough in the Renew Tees Valley Wind Energy Capacity Study 2004. This considered a number of constraints to onshore wind including wind speed, aviation, residential amenity and environmental and landscape designations and identified a number of core 'Wind Energy Resource Areas' where wind energy developments are potentially deliverable in Redcar and Cleveland. BRL believe that in line with the NPPF a natural step for the Council would be to include the findings of the report in the Local Plan specifically the three 'Wind Energy Resource Areas' so that development of such sources can be secured. BRL object to the decision to omit any reference of the report in the Plan and question how such a decision has been taken, especially as it leads to a strong conflict to the clear guidance within NPPF. BRL object to Policy SD6 as it currently fails to reflect the presumption in favour of sustainable development that lies at the heart of national planning policy and clearly does not attempt to recognise the important role that renewable energy has to play in securing a sustainable future for Redcar and Cleveland and the UK. Policy SD6 needs to be amended to reflect the importance of renewable energy in securing a sustainable future as stated in national planning policy. BRL object to the statement 'Renewable energy schemes will be supported and encouraged to help meet the Government's climate change objectives and targets for electricity generation from renewable sources' and consider that it needs to be expanded so that it adheres to the NPPF and reflects the inherently sustainable nature of all renewable energy developments and the economic, environmental and social contributions that they make. Furthermore, BRL object to the duplication of Policy N1 which already requires all forms of development to adhere to the exceptions criteria and question the merits of replicating it again in Policy SD6. BRL strongly object to proposed blanket ban on development that will create an impact upon nationally protected landscape areas or Sensitive Landscape Areas and firmly believe that it should be removed. Impacts can be positive, negative and vary in terms of scale and acceptability and this approach adopted in Policy SD6 is unsound. It is not acceptable in any way to enforce such a policy that blatantly restricts and negatively predetermines development before it has been individually assessed on its own merits especially for renewable energy that is an inherently sustainable form of development. The policy test should be 'developments will not be allowed where they result in unacceptable impacts upon nationally protected landscape areas or Sensitive Landscape Areas'.

Officer response:

The NPPF states that the local planning authority 'should consider identifying suitable areas for renewable and low carbon energy sources, and supporting infrastructure, where this would help secure the development of such sources'. While the Tees Valley Wind Energy Capacity Study (2004) identifies areas of least constraint, it was not considered an adequate evidence base to identify the areas identified within Redcar and Cleveland as 'suitable areas for renewable and low carbon energy sources'. The study predates the Landscape Character Assessment (2006) and associated Supplementary Planning Document (2010) which should also be taken into consideration as part of any planning application for renewable and low carbon energy. However, the policy/supporting text will be updated to make reference to the study. The policy does not impose a blanket ban on development that will create an impact on nationally protected landscape areas or Sensitive Landscape Areas, rather it seeks to ensure that the impact is not unacceptable with regard to the landscape, as detailed in policy N1. Nevertheless, the policy will be updated to include more positive wording and to avoid repetition.

DLP205**Full Name:** Mr S M White**Organisation:** Campaign for the Protection of Rural England (CPRE)**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

We are disappointed to note the rejection of minimum separation distances between wind turbines and residential property, preferring to judge each case on its merits. If a residential property is 500m from a turbine then the location is irrelevant and there can be no difference from one application to another. The only possible exception could be an application from an individual eg farmer who is in an isolated location away from other property. Much better would be the restriction of wind turbines to suitable industrial areas

Officer response:

Policy SD6 seeks to ensure that renewable energy developments, including wind turbines, are located in suitable locations, however it is not considered appropriate to set a minimum separation distances between wind turbines and homes. Appropriate separation distances would vary on a case-by-case basis as issues such as visual amenity and noise would be influenced by variables including scale, topography and landscape. National planning practice guidance (DCLG, 2014) states that local planning authorities should not rule out otherwise acceptable renewable energy developments through inflexible rules on buffer zones or separation distances.

Section/Policy**Policy SD 6****Renewable Energy****DLP456****Full Name:** Ms Sarah Housden**Organisation:** North York Moors
National Park**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

The approach taken in Policy SD6 to minimising the impact of renewable energy developments on the National Park is welcomed, though could be strengthened. The policy is intended to deal with all types of renewable energy development though it is the visual impact of large turbines along the northern boundary of the Park that have the potential for the greatest harm to its setting, both from within and outside the Park. Policy SD6 should include reference to protecting the setting of the Park from both within and outside the protected area which would help to ensure that the wider impact of wind turbine developments on the setting of the Park are addressed. The list of criteria in Policy SD6 that will be considered when determining planning applications should also include the impact on recreation. We would be happy to suggest some amended wording for Policy SD6 to address the above comments.

Officer response:

Policy will be updated to include reference to protecting the setting of the Park and include consideration of impacts on recreation.

Comment summary:

This policy should seek to encourage the development of district heating, including retrofitting and in new developments. This is due to the unique opportunities presented by the Tees Valley's energy intensive industries. Supporting such district heating will allow energy intensive businesses to operate more efficiently and help to lower the carbon generated in the borough. This will also assist in the long term resilience of the economy to climate change and improve the local environment.

Officer response:

Paragraph 2.44 explains that we will support the potential for waste heat from industrial processes being used to heat homes, businesses and community services, however the Policy will be updated to explicitly support the development of district heating, including retrofitting and in new developments.

Comment summary:

Wind turbine development that has a direct beneficial gain for the community or for local businesses (e.g. farms or small workshops) should be given priority. The existing National Grid line from Lackenby to Boulby should be safeguarded and, if necessary, strengthened, in view of the increasing demand on the existing line from new housing development.

Officer response:

Comments noted. Paragraph 2.44 of the supporting text explains that we will support community based renewable energy schemes which can help to deliver cheap energy sources to local communities through a local supply network. The National Grid are consulted on any proposals close to, or under/over power lines and substations, to ensure that any issues are taken into account at an early stage and that safe clearances are maintained.

DLP186**Full Name:** Mr John Dear**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** In Part**Comment summary:**

Rejection of SD6a and 6b means that there is no agreed strategy for development of on shore wind farms. I wholly support the impetus for the area to become a centre for green technology and renewable energy. However the emphasis should be on technology where sustainable job creation is possible, rather than generation. It seems that current wind farm projects disregard local concerns about visual intrusion. Bearing in mind the need to develop tourism in the area, this seems misguided, as the long term economic benefits from tourism will outweigh short term benefits from wind farm establishment. None of the current wind farm projects seem to fit in the preferred less sensitive landscapes, such as Restoration Landscapes and suitable industrial areas

Officer response:

The Local Plan's strategy for the development of renewable energy is to encourage their use in suitable locations, detailing the issues which will be taken into consideration. SD6 includes a number of considerations which will be taken into account when assessing any planning applications including impact on residential amenity and impact on landscape.

DLP744**Full Name:** Mr H Lang**Organisation:** Durham Tees Valley Airport**Agent Name:** Anna Bensky**Agent Organisation:** Peel Holdings Ltd**Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Whilst DTVA support and welcome the principle of Policy SD6 (Renewable Energy), which supports and encourages schemes to meet the Government's climate change objectives and targets for electricity generation from renewable sources, it is of fundamental importance that the operation of the Airport is not restricted. Any development which impacts upon the airport radar potentially compromises the safe operation of the Airport. In some instances wind farm developments will be unacceptable due to their location in the Airports airspace. In others it may only be acceptable if appropriate mitigation is provided. Individual schemes which may not be significant in their own right could have significant cumulative impacts. It is therefore important that Policy SD6 highlights the issue, sets out that schemes which significantly affect the Airport would be refused and where schemes may be acceptable subject to appropriate mitigation that conditions will be applied to that effect. Accordingly, we request that the following wording is included within the policy text: "Development proposals for the generation of renewable energy will not be granted if there would be any adverse impacts on airport radar, unless mitigation is possible and a scheme for its provision is agreed with the airport affected."

Officer response:

Policy will be updated in-line with suggestions.

LOCAL SPATIAL STRATEGIES

DLP802**Full Name:** Mr Alan Hunter**Organisation:** English Heritage**Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

Local Plans should include strategic policies to conserve and enhance the historic environment of the area and guide how the presumption in favour of sustainable development will be applied locally. Policies need to be clearly strategic, otherwise they may be overridden by Neighbourhood Plan policies. If the policies delivering heritage conservation may be overridden then the Plan cannot be confidently predicted to deliver development needs sustainably throughout the Plan period.

Officer response:

A statement setting out the strategic policies will be prepared alongside the revised Local Plan.

DLP573**Full Name:** Ann Higgins**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

The council has concentrated on creating a new district centre at Low Grange Farm. Businesses and residents of the Eston and Normanby area need the regeneration of their existing centres. Need to keep the Recreation Ground as an open space facility - large buildings here would further erode the open space we have left for our surrounding communities. Council should be doing more to protect the heritage of the Eston Hills and preserve them from further vandalism and erosion of modern day, which they have done little to for many years. The council has focussed on South Bank and Grangetown, rather than other district and local centres (Eston, Normanby, etc). District Centre Eston and surrounding local centres (Normanby) etc. The Eston District Centre should be the councils priority.

Officer response:

The policy explains that the Council and its partners will safeguard and support improvements to Eston District Centre, the Local Centres and other neighbourhood shops. The Local Plan does not propose building on the Recreation Ground. The Local Plan contains a number of policies which aim to protect Eston Hills, including policies protecting landscape, historic assets and biodiversity.

DLP704**Full Name:** Janet Jeffrey**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

There is a shortage of appropriate care homes in Greater Eston. Would like to see the Great Park restored to its former glory. Concerned that people are not being properly consulted about proposals for Low Grange.

Officer response:

The Local Plan makes allocations for assisted living apartments to help meet the ongoing demand for this type of accommodation as the number and proportion of older and retired residents across the borough increases. The Council are currently identifying priorities in Greater Eston, with The Great Park (Eston Rec) still remaining one of our areas for future development. The Council will be consulting people once we have a clearer view on proposals and timeframes. This will be a separate process to the Local Plan. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement.

Section/Policy**Policy LS 1****Greater Eston Spatial Strategy****DLP1259****Full Name:** England & Lyle
(private clients)**Organisation:****Agent Name:** Mr Ian Lyle**Agent Organisation:** England & Lyle**Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

We would generally support Policy LS1 and in particular; 1. The inclusion of Normanby within this wide sub area; and 2. Criterion 'c' which states that the Council and its partners will: develop new housing throughout the Greater Eston Area to meet the needs and aspirations of the local residents. We consider that there is a need to provide additional good quality housing in this part of the Borough and our client's site at Woodcock Wood would help meet such needs in a sustainable and attractive location . Our clients site uniquely in the Greater Eston Sub Area ,and the Redcar conurbation as a whole, has the attributes that would make it attractive for higher value executive and executive style housing, including self-build housing. In relation to Criterion 'a' we would counsel against too heavy reliance on the housing allocation at Low Grange Farm which is in a poor market area and is unlikely to deliver the quantum of housing development within the Local Plan period suggested in Policy 3.2.

Officer response:

Support noted. The Woodcock Wood site was rejected for housing development as the proposals would remove the defensible boundary established by the A174, which helps to effectively contain the built-up area and distinguish it from the Eston Hills and open countryside, and could encourage further development south of the Parkway. Development could have an adverse visual impact on the Eston Hills landscape and the ecological value of the adjacent woodland and country park, which is recorded as having European protected status and biodiversity priority species. Also the site is remote from the local community and the potential scale of development may have unacceptable implications for the local road network. Development of the Low Grange site is a key Council priority and there is developer interest in the site. This has influenced the suggested phasing where it is envisaged that this site will be built out gradually. The projections also take into account the existing development at High Farm and the allocation of the former Town Hall site in the wider area when calculating delivery rates across the period. The phasing also takes into account the need for enabling infrastructure requirements. It is therefore considered that the suggested build rate is appropriate.

Officer response:

Comments noted.

Section/Policy**Policy LS 1****Greater Eston Spatial Strategy****DLP547****Full Name:****Organisation:** Asda Stores**Agent Name:** Michele Steel**Agent Organisation:** Deloitte LLP**Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Policy LS1 sets out the Spatial Strategy for Greater Eston, which includes the settlement of South Bank. ASDA's store was previously designated as being within the South Bank District Centre. This designation was removed in the 2007 Core Strategy, which proposed a new District Centre at Low Grange Farm, approximately 1km south of the previous designation. The new District Centre has since been developed. ASDA's South Bank store and the adjacent units are now undesignated in the Draft Plan. Spatial Strategy aim c) is to, 'strengthen the role of Low Grange District Centre, whilst safeguarding and supporting improvements to Eston District Centre, the Local Centres and other neighbourhood shops.' ASDA supports the aim to strengthen the role of existing retail facilities within Greater Eston and would seek further policy support for its store and the surrounding retail and amenities. ASDA South Bank is the only ASDA store in the western part of Redcar and Cleveland and serves a large catchment including shoppers from Stockton-on-Tees Borough Council. The important role ASDA South Bank plays in the convenience retail economy is acknowledged in the 2011 Strategy Retail and Office Study ('the Retail Study'), which form part of the evidence base for the Draft Plan. The Retail Study finds that ASDA South Bank accounts for some 17% convenience goods expenditure within the Council area. It serves both the convenience shopping needs of the local population and attracts shoppers from the wider area to Greater Eston, encouraging linked shopping trips with Low Grange and Eston District Centres. The store is in a highly accessible location, close to established residential areas and adjacent to South Bank railway station. In addition to ASDA, a post office, local pub and additional retailers provide important services to local communities. In light of the above, it is considered that there is insufficient protection for the retail and amenity facilities at this location, which continue to serve an important function for local communities. It is requested that this area be re-designated as a District Centre in the new Local Plan. Such a designation would be in keeping with the spatial strategy aim to strengthen important retail provision in the Greater Eston area and ensure these facilities continue to complement the network of town centres.

Officer response:

It is not proposed to include ASDA's South Bank store as part of a district centre within the retail hierarchy. There are already district centres established in the area which provide a range of shops and services to meet the needs of the community. Whilst the role that ASDA South Bank plays in meeting the weekly shopping needs of local residents is recognised, it is not proposed to identify the site on the proposals map as a retail location.

The policy should include support for a new pier. Marske should not be included as part of the conurbation. Question the cost of creating landmark sculptures. Object to development south of Marske for reasons including lack of infrastructure, it's a greenfield site, capacity of the landscape to accommodate development and impact on open space and the built and heritage assets. Longbeck should be mentioned under rail improvements.

Officer response:

The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council is aware of the support for the development of a new pier in Redcar. The development of a new pier will be subject to the availability of funding and the impact on the various environmental designations in the area. The policy will be amended to indicate support for the investigation into the feasibility of developing a new pier. The locational strategy aims for at least 60% new development in the conurbation, to ensure a sustainable pattern of development and to broadly retain the existing population split between the urban and rural parts of the borough. The inclusion of Marske within the conurbation and the Redcar sub area reflects the existing settlement hierarchy adopted through the LDF Core Strategy (2007), and no changes are being proposed through the Local Plan. Other comments are in relation to Marske Inn Farm (H3.1). Policy TA3 sets out the projects supported to improve accessibility. It is accepted that creating landmark sculptures is an aspirational project and subject to funding.

I was disappointed not to see any proposals for a pier as part of the leisure based development in Redcar and take this opportunity in expressing my concerns. I understand the current economic constraints which prevent large capital expenditure but hope that my representations and those made similarly will convince the Council to include a pier as an aspirational leisure and tourism development in line with the draft local plan. It is quite clear that such a development will bring economic and social benefits and which ultimately will become a heritage asset. It is envisaged that a self-sustaining community asset could be built, that would showcase local hi-tech marine engineering with a vision of a structure that would act as a platform for renewable energy and a vantage point for experimental offshore projects. Projects of this nature would allow an opportunity to pull together the local community, local industrial experts, and multinational contractors to create a unique focal point for the region. The pier, aside from the obvious social benefits would also act as a magnet for hi-tech commerce and academic research to bring significant job opportunities and economic growth for the area. Such a structure could also compliment a renewal energy visitor centre which could be incorporated into the structure itself, allowing the public a great understanding of renewable energy, the local environment and eco systems. It may further also incorporate an aquarium centre and lobster hatchery or indeed a wedding venue amongst others to help achieve its self-sustainability. The following policies have been considered in drafting the above amongst others: - SD1 "sustainable design; SD4 "general development principles; SD6 "renewal energy; LS2 "leisure and community facilities; LS2 "development renewable energy centre; LS2 "safeguard and enhance natural and historic environments of the town, coastline and locality " Regulation 1 " the delivery of mixed use leisure and tourism development of coast I hope you take the above issues into consideration and support the appeal that a pier is included within the draft local plan.

Officer response:

Comment summary:

I understand that Redcar & Cleveland Council has published its Draft Local Plan, and that Public Consultation on the draft plan started on 21st October and ends on 2nd December. On looking at the Draft Plan it has been noted that there is no mention for a new 'Proper' pier for Redcar. Nearly everyone that I have spoken to in the last 2 years, has bemoaned the fact that we do not have a Pier, and as I am sure you are aware there is a campaigning group "The Redcar Pier Association" who campaign tirelessly to try and help get funding to enable the building of a Pier which will go out to sea, to date that organisation has a membership of over 2000 people, and this is growing on a continuous basis. The Draft Local Plan was discussed at some length at the forum's last meeting held on the 26th of November 2013, and it was agreed by everyone present, that I as Chair I write to yourselves, and express our concern that a Pier has not been included in the Local Plan for Redcar, and all members agreed that a pier should be included in the Local Plan. It was stated by a number of those present that natural pier (one that goes out to sea) is essential for encouraging growth in the local economy through tourism for Redcar as it does for Saltburn.

Officer response:

The Council is aware of the support for the development of a new pier in Redcar. The development of a new pier will be subject to the availability of funding and the impact on the various environmental designations in the area. The policy will be amended to indicate support for the investigation into the feasibility of developing a new pier.

Comment summary:

Policy LS2 It is difficult to see why a substantial area of new housing to the south of Marske is proposed, it certainly isn't needed. A look at properties for sale on the Rightmove web site shows that there are currently 310 properties for sale within Marske and almost 1000 within 3 miles. All price ranges seem to be represented. The current supply of housing seems to be more than adequate, and is likely to remain so for the foreseeable future. It is impossible to justify any new housing on greenfield locations in this area of the borough.

Officer response:

Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline. It is therefore necessary to provide an appropriate mix of sites to broaden and improve the housing offer in the borough.

I would like to appeal to you in relation to the 20 year plan for the borough to include plans for a real pier at Redcar. It is imperative that you do include this as the people of Redcar have continually asked the Council to listen to what they want. I do understand the financial restraints the Council are under but if you have put regeneration and tourism at the top of your lists, I could guarantee that this is one firm sure way of bringing this town back up as a fantastic seaside resort.

3.14 'Marske has always maintained its own distinctive character, and remains separated from Redcar by a green wedge.' this quote is very important, as a resident of Marske I am concerned that the proposed developments will join Marske to New Marske and Saltburn and there will no longer be any 'strategic gap' between the 3 villages. People choose to live in East Cleveland as they prefer village life and as quoted in your introduction enjoy 'a high quality environment that makes it an attractive place to live' this is deeply under threat if you join Marske, New Marske and Saltburn to Redcar in one huge urban sprawl, characteristic of the Costa Del Sol or Ingleby Barwick.

Officer response:

A green wedge will be maintained between Redcar and Marske to ensure that the two settlements do not coalesce and maintain their identity. This is a requirement of Policy N2 Green Infrastructure. Strategic Gaps will also be retained between Marske and New Marske and Marske and Saltburn. Whilst it is recognised that the proposals for Marske Inn Farm would result in a narrowing of the strategic gap between Marske and New Marske, Policy H3.1 indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity.

DLP340**Full Name:** J Dolan**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

Would like to see a traditional pier for Redcar included in the plan. The pier could use locally sourced materials and local labour. Would further enhance the regeneration of Redcar. The pier would become an additional tourist attraction. A pier could incorporate the ability to generate green energy. The Regeneration Policy for Coatham could be extended to include a pier within its remit. A new pier would need to avoid the SSSI area. and acknowledge the importance of these sites. The pier could incorporate a marine/conservation facility. A pier would be a heritage asset for future years. Funding for a pier would need to come from external sources but we think that it is important that the desire for a pier is endorsed.

Officer response:

The Council is aware of the support for the development of a new pier in Redcar. The development of a new pier will be subject to the availability of funding and the impact on the various environmental designations in the area. DLP1260**Full Name:** England & Lyle
(private clients)**Organisation:****Agent Name:** Mr Ian Lyle**Agent Organisation:** England & Lyle**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

We object to the inclusion of Marske with the Redcar Sub Area. Marske is neither physically nor functionally part of the conurbation but a free standing settlement with its own character. It does not form part of the Redcar Sub Area and should therefore be excluded. As such the scale of development proposed through Policy LS2 and H3 is disproportionately large and unsound.

Officer response:

The locational strategy aims for at least 60% new development in the conurbation, to ensure a sustainable pattern of development and to broadly retain the existing population split between the urban and rural parts of the borough. The inclusion of Marske within the conurbation and the Redcar sub area reflects the existing settlement hierarchy adopted through the LDF Core Strategy (2007), and no changes are being proposed through the Local Plan.

DLP1275**Full Name:** Mr Iain Pay**Organisation:** Taylor Wimpey North
Yorkshire**Agent Name:** Mr Ian Lyle**Agent Organisation:** England & Lyle**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Taylor Wimpey object to policy LS2 for two fundamental reasons and do not consider that the policy is necessary. As outlined above [see DLP1272], Taylor Wimpey consider that Marske should not be included within the conurbation, and therefore the Redcar Spatial Strategy, because it is physically separated from the main conurbation and has its own distinct identity. Policy LS2 proposes that the vast majority of Redcar's housing requirements will be met through housing development on one single site in Marske (Policy H3.1), with, by comparison, only a very limited amount of development being proposed in Redcar itself. We consider this approach to be unsound. The text accompanying the policy confirms that Redcar is the largest town in the Borough yet the plan does not provide for any significant housing development within it or around it. The Draft Local Plan does not justify this in any way and the accompanying Sustainability Appraisal does not indicate that any realistic alternatives were considered by the Council in arriving at this strategy. As the largest and most sustainable settlement in the Borough, it is surely expected that at least some further development will be proposed in Redcar where there are sustainable, viable and deliverable sites.

Officer response:

The locational strategy aims for at least 60% new development in the conurbation, to ensure a sustainable pattern of development and to broadly retain the existing population split between the urban and rural parts of the borough. The inclusion of Marske within the conurbation reflects the existing settlement hierarchy adopted through the LDF Core Strategy (2007), and no changes are being proposed through the Local Plan. All potential housing sites have been assessed and it is considered that the locational strategy can be achieved through the sites identified in the Local Plan. Other sites that have been rejected for allocation are considered to be less suitable.

DLP1103**Full Name:** Mr Russell Moxham**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Marske has been included as part of the conurbation and housing at Marske included in the draft Local Plan following representations from Knight Frank on behalf of the West Midland Pensions Fund. Residents views haven't been taken into account. Development is being proposed on brownfield rather than greenfield land.

Officer response:

The locational strategy aims for at least 60% new development in the conurbation, to ensure a sustainable pattern of development and to broadly retain the existing population split between the urban and rural parts of the borough. The inclusion of Marske within the conurbation and the Redcar sub area reflects the existing settlement hierarchy adopted through the LDF Core Strategy (2007), and no changes are being proposed through the Local Plan. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

DLP762**Full Name:** Mr Alan Hunter**Organisation:** English Heritage**Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

Policy LS2 - in Policy LS1 (Greater Eston Spatial Strategy) and Policy LS3 (Rural Communities Spatial Strategy) we are advised that development must safeguard and enhance buildings, sites and areas of heritage and cultural importance. However, the corresponding requirement in the Redcar area requires this only of the heritage assets at Kirkleatham Village - thereby leaving the remainder of it vulnerable to development which does not provide such protection.

Officer response:

The text will be changed to include safeguarding and enhancing all buildings, sites and areas of heritage and cultural importance.

Section/Policy**Policy LS 2****Redcar Area Spatial Strategy****DLP676****Full Name:** Mrs G Christie**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Other**Agree with section?:** No**Comment summary:**

Welcome the new leisure facilities coming to Redcar, but worried about certain other aspects of development. Development on Esplanade is seasonal due to strong winds and inclement weather, therefore more development needs to be on the High Street. Redcar House seems to involve demolition of a whole block of the centre of Redcar for houses that could be anywhere. This is not consistent with the part of the plan which emphasises the importance of the historic environment.

Officer response:

Support for leisure facilities noted. The Policy seeks to secure leisure development in the town centre as a whole, including the High Street. The policy seeks to support the Redcar House proposals set out within the Regeneration Masterplan. Any impact upon the historic environment would need to be carefully considered against the historic environment policies contained in the Local Plan.

Would like a new pier at Redcar to be included in the councils proposed long term development strategy for the area. Believe that capital investment in such a community resource would allow local industry to showcase it's offshore engineering skills and could be a potential site to allow feasibility studies for offshore & tidal energy. The site would become a visitors attraction with the intended aim of being economically self sufficient through visitor / leisure facilities and renewable energy. We are not asking the council to fund or build this themselves but we are asking them to include a pier in the long term strategic plan and recognise the potential of our greatest asset, the beach, in the same way they identify sites for new housing, leisure facilities, businesses and retail parks etc. The Redcar Pier Association are a group of residents and business owners, if you find out more about them it will be plain to see for yourselves the popularity and passion of the members of The Redcar Pier Association you will see that Redcar's residents are most definately showing an interest in wanting a pier in their town.

Officer response:

The Council is aware of the support for the development of a new pier in Redcar. The development of a new pier will be subject to the availability of funding and the impact on the various environmental designations in the area. We are not asking to fund or build this themselves but we are asking them to include a new pier in their long term strategic plans and recognise our greatest asset, the beach. Looking back at photographs has made me see what a wonderful place Redcar was. A series of bad decisions made by past councillors has taken the traditional beautiful buildings out of Redcar and moulded Redcar into what we see today. Redcar needs the life breathing back into it and the inclusion of a new pier would be the beginning of Redcar's return to glory. Look at Saltburn and envisage how Redcar could become. More visitors to Redcar would mean more business opportunities in the town. Quality shops would attract yet more visitors and more business for all.

Officer response:

Marske has always maintained its own distinctive character, and remains separated from Redcar by a green wedge. Marske is served by shops and services through its district centre, with employment opportunities at Longbeck Industrial Estate. The development of a new community to the south of Marske is a key objective of the Regeneration Masterplan, and will be essential in meeting identified housing needs.' You are about to destroy that 'distinctive character' and a substantial part of its remaining 'green wedge' (it is no longer separated from Redcar). The employment opportunities at Longbeck can never meet the demand from the new development and you have not yet demonstrated why housing needs can only be met in this way.

Officer response:

A green wedge will be maintained between Redcar and Marske to ensure that the two settlements do not coalesce and maintain their identity. This is a requirement of Policy N2 Green Infrastructure. Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth across the Borough and in seeking to redress population imbalance and decline. It is therefore necessary to provide an appropriate mix of sites to broaden and improve the housing offer in the borough.

I would like to support the plan for the local group who have been campaigning for a new pier at Redcar. This would compliment the new renovations in the town. I believe the pier would give the seafront an increased sense of personality which would attract more people to the town. People enjoy walking along pierslook at Saltburn and Whitby on sunny summer and wintery days. Fishermen would also visit to fish from it. Could fishing competitions also be held on it? A glass walkway could be added to it to add a sense of uniqueness to it. I do believe funds could be sought from the eu , lottery etc plus local fund raising campaigns. Could i also say Redcar has some really good individual food stores . Could the council become involved in zoning these shops closer together and promote it as a shopping destination. It may encourage some of the shops to up their games ie the wet fish shop always looks empty and forlorn. Im not aware of another local town with a fish shop, local butchers , fruiterers and if we cud get a more local bakery or encourage those around to promote local specialties.....remember curd tarts and other yorkshire treats. This could make it more inviting and attract more people into the town. Ps have you thought about a parmo festival and competition with all the local restaurants taking part. Although far from healthy it maybe a crowd pleaser and definately unique. Say over the summer when an outdoors comp woulx be feasible??

Officer response:

The Council is aware of the support for the development of a new pier in Redcar. The development of a new pier will be subject to the availability of funding and the impact on the various environmental designations in the area. The policy will be amended to indicate support for the investigation into the feasibility of developing a new pier. Section 5 of the Local Plan included policies for new retail developments. The Council do not at the present time have any intention to group specialist food shops together and therefore will not be included in the Local Plan. However, this is not to say that the Council would not support and lead on such scheme in the future.

Would like to see a traditional pier for Redcar included in the plan. The pier could use locally sourced materials and local labour. Would further enhance the regeneration of Redcar. The pier would become an additional tourist attraction. A pier could incorporate the ability to generate green energy. The Regeneration Policy for Coatham could be extended to include a pier within its remit. A new pier would need to avoid the SSSI area, and acknowledge the importance of these sites. The pier could incorporate a marine/conservation facility. A pier would be a heritage asset for future years. Funding for a pier would need to come from external sources but we think that it is important that the desire for a pier is endorsed.

Officer response:

The Council is aware of the support for the development of a new pier in Redcar. There is no mention of the aspirational plan for a horizontal pier on Redcar sea front. It is absolutely essential that this proposed project is included in the plan as the first step on the journey to delivering it. Failure to include it will send the wrong signal and be a death-knell for the project even before it has got off the ground. I wholeheartedly support the vision for a horizontal pier as I think that the town will benefit greatly from having one once again.

Officer response:

The Council is aware of the support for the development of a new pier in Redcar. How disappointing to speak to RCBC Strategic Planning Department to hear that they have no knowledge of the Redcar Pier Association AND that no one has put forward any representations from the public for Redcar to have a real pier. They state that they are not aware of ANY public support for a real pier and that is why it has not been considered in the 20 year plan for the Borough. The Council, both Councillors and Officers, are fully aware of who we are and what we are trying to achieve. We have had several meetings with Officers and Councillors, who fully support our idea, some Councillors are paid up members of the RPA. You only have to look at how successful Saltburn is with there pier, if you had the vision in your 20 year plan to have a pier, you would vastly increase footfall to the town both increasing revenue to the town centre and businesses alike. You cannot ignore what people have been asking for, the Council have done a fantastic job on the seafront, the Hub, Tuned Inn to name but a few. As a Redcar resident and Tourist Accommodation provider, I believe we are missing a real opportunity here which would be fantastic for the area. The Redcar Pier Association has 551 paid up and returning members, over 2,600 likes on Facebook with ever increasing monthly support. Our members are from all over Britain, the USA and Australia to name but a few. Over the next few weeks, we will be attending the open days for comments about the 20yr plan at the various locations given. I do appreciate the Council is facing massive funding issues and I know that to build a pier is expensive, last cost was Â£6.5 million, but look at the bigger picture of what the Council could achieve with a modern pier.

Officer response:

I would like a new pier at Redcar to be included in the councils proposed long term development strategy for the area. We believe that capital investment in such a community resource would allow local industry to showcase it's offshore engineering skills and could be a potential site to allow feasibility studies for offshore & tidal energy. The site would become a visitors attraction with the intended aim of being economically self sufficient through visitor / leisure facilities and renewable energy. We are not asking the council to fund or build this themselves but we are asking them to include a pier in the long term strategic plan and recognise the potential of our greatest asset, the beach, in the same way they identify sites for new housing, leisure facilities, businesses and retail parks etc.

Officer response:

What is the Redcar House project? Who approves and who pays for these 'landmark sculptures' ? An opportunity to link bus and rail services was lost during the recent town centre/ Morrisons development. The car park land between West Dyke Road and Westbourne Terrace was left by Redcar B.C. for road improvements. Better parking in the town centre will improve the viability of the shopping uses. The Redcar Lane/ Thrush Road junction could be improved by using the allotment land for slip roads. This again was land earmarked by Redcar B.C. for road improvements related to the level crossing. The viability of a 'park and ride' would depend on a massive increase in town centre use.

Officer response:

A sustainable Redcar House will be an energy efficient, distinctive and innovative style of housing that will be delivered on infill sites along the seafront and in the town centre, explanation will be added to the supporting text. Landmark sculptures are proposed as part of the wider regeneration of the seafront. There no plans for alterations to the car park at this time. The allotments at Redcar Lane/Thrush Road are identified on the proposals map as open space. They will continue to be protected for this use by policy N3 of the Local Plan.

Comment summary:

As a Redcar resident can I just state how delighted I am at the completed sea front developments which clearly are a credit to the area and seem to be generating interest and business. I support the above proposal [a pier] which on completion would be another major attraction and boost to the town and complement the great improvements already provided. I consider then that this proposal should be allowed for and incorporated into the draft future planning for this area. The interest in this proposal continues to gain support and our Council although presently cash strapped should encourage substantial engineering ideas like this which will enrich our lives and provide employment in the construction phase and long term use in the future.

Delete the bullet point about a substantial area of new housing to the south of Marske. A look at properties for sale shows that there are currently 310 properties for sale within 1 mile of Marske centre and 931 within 3 miles. Therefore there appears to be an adequate supply of housing for the foreseeable future in this area. Of the houses for sale, about 40% are under £125,000 and 10% above £250,000, all price bands therefore appear to be served. House prices in Marske are currently about 3% below the 2012 value and 14% below 2007 (Source Rightmove.co.uk). A sizeable additional development will therefore merely serve to increase the oversupply of housing and to depress prices still further. ALL housing development in the borough within the next 10 years should be on brownfield locations of which there is an adequate supply.

Officer response:

Demand for additional dwellings is ongoing across Redcar and Cleveland with the number of households increasing as more people live alone and for longer and average household size diminishes. This is expected to continue over the plan period. It is the Council's view that in addition to meeting household growth projections, the housing requirement should allow for an increase in housing demand due to prospective economic growth and in seeking to redress population imbalance and decline. It is therefore necessary to provide an appropriate mix of sites to broaden and improve the housing offer in the borough.

Rural Communities Spatial Strategy

DLP142		Comment summary:	Officer response:
Full Name:	Mr Timothy Argument	You will 'encourage the development of a new hotel in Saltburn and support the enhancement of its role as a visitor destination;'. You do not provide occupancy stats on the current hotels or guest houses in Saltburn or Marske. At the same time you are proposing a sixty bed hotel in the new housing development. What IS this tourist boom (in New Marske Woods?) that you feel will fill all these beds? You will 'encourage the improvement of rail passenger services;investigate the feasibility for reintroducing rail passenger services into East Cleveland;' this is just aspirational verbiage, pure pipe dreams without any substance to address the real transport problems faced from Saltburn to Teesside, that your Housing Plan will clearly exacerbate (with c2,00- 2,500 more cars!)	The need for future hotel provision is evidenced in the Tees Valley Hotel Futures report (2009) which forms part of the evidence base for the Local Plan. Policy H3.1 does propose a hotel as part of the strategic housing site. No date for the completion of a feasibility study for reintroducing rail passenger services to East Cleveland can currently be set, however this does remain an aspiration for the future. An increase in the amount of traffic is an inevitable consequence of all housing development and a certain level of increase will need to be accepted from all developments. However, we have aimed to locate housing sites in more sustainable locations, where need to travel by car will be minimised, while ensuring the borough's housing needs are met. All sites will be fully integrated into the transport evidence base assessments and if necessary requirements included in policy to undertake a Transport Assessment to consider the access requirements and wider implications of the proposals for the highway network and/or the requirement to prepare a Travel Plan to consider and include measures to encourage the use of sustainable modes of transport.

Full Name:	Mr Iain Pay	Taylor Wimpey object to policy LS3 of the basis that, as outlined previously, there is no provision for further development in a number of the most sustainable settlements within the Borough, in particular Saltburn and New Marske. More development should be directed at Saltburn, which is identified in the Council's Settlement Characteristics Report as the most sustainable of the East Cleveland Towns yet, it is proposed to receive the least amount of development. The Council's decision to restrict new residential development in the most sustainable settlement is not justified and does not accord with the aims of the NPPF. Moreover, the wording of the policy as it stands is not consistent with the spatial strategy and draft housing allocations. It should be made explicit in the policy that further housing development should be directed at Guisborough given the role of the settlement and the allocations proposed in the settlement as part of the draft Local Plan.	Provision is made in policy H3.29 for residential development of the former Saltburn Junior School. In preparing the Local Plan the priority has been to accommodate new development on previously developed land and within existing settlements. In order to provide sufficient deliverable sites to meet the identified housing need, it has been necessary to allocate the most sustainable sites on the edge of existing settlements. These sites have therefore been allocated in the Plan. Policy will be updated to recognise the role of Guisborough with reference to residential development.

Comment summary:

The distinctive heritage and culture and special qualities and character of Guisborough, and the fact that it is an historic market town, are acknowledged on page 16, as are the unique qualities of all of East Cleveland. However, much of the following proposals seems to be a plan to urbanise East Cleveland, without the consent of the residents; no consultation has taken place. If this Draft Development Plan is a truly sincere consultation, then heed must be taken of the concerns of the people who live here.

Officer response:

To meet the identified housing need and provide sufficient deliverable sites, sites have been allocated across the Borough, including in Guisborough which acts as the principal rural service centre. The priority has been to accommodate new development on previously developed land and within existing settlements, however it has been necessary to revise development limits to accommodate some development in sustainable locations on the edge of existing settlements. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Guisborough, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement.

Comment summary:

Although the Eco Park is located away from residential areas, the council should aspire to attract recyclers and similar 'green' technologies with high environmental standards and low potential nuisance impacts in order to promote and encourage the development of a 'top quality' Eco Park rather than the concentration of waste/recycling facilities which are considered to be 'bad neighbour sites'. Furthermore, it is recommended that developers proposing new industrial plants are encouraged to use Best Available Techniques (BAT) to design waste out of their processes as far as possible and to minimise waste. The use of derelict land and vacant industrial land for biofuel cultivation is innovative and imaginative. However, the council should make it clear in the Local Plan that any growing media applied to bring such land up to the standard suitable for coppicing or horticulture is of sufficiently high quality. It should not add to the levels of contamination already present within a site or require subsequent removal.

Officer response:

The policies for minerals and waste are contained within the Tees Valley Joint Minerals and Waste DPDs, which were adopted in September 2011. It is not intended to replace these policies through the Local Plan.

Comment summary:

Proposed housing allocation H3.25 and site REG 1 are partly located within flood zones 3 and are therefore at risk from flooding. The Local Plan should seek to steer development away from areas at risk from flooding and provide evidence that a sequential approach to growth has been undertaken. Development located within these areas will need to be accompanied by a Flood Risk Assessment (FRA). The FRA will need to discuss all relevant factors of flood risk such as risk to the development, risk to the areas, flow routes, depths, finished floor levels etc. Any development on sites at risk from flooding will need to achieve the 100 year level plus climate change allowance for the lifetime of the development.

Officer response:

Policy SD4 and the supporting text directs development away from areas most vulnerable to flooding. Development will not be allowed in higher risk flood zones unless the social/economic/regeneration benefits outweigh the flood risk and design solutions can minimise the impact of flood risk. The policy and supporting text will be updated to indicate that where development is proposed in flood zones 2 and 3, proposals should meet the sequential and exceptions tests and be supported by a Flood Risk Assessment.

We have concluded that there is the potential for land allocated in your plan to encroach on consultations zones. The land allocations that could be effected are: ii) Allocation REG 2 (Kirkleatham) could encroach upon the inner, middle and outer consultation zones of multiple establishments. [see attached letter for compatibility of developments within consultation zones]. The potential for encroachment is being brought to your attention at an early stage so that you can assess the actual extent of any incompatibility on future developments. Information on the location and extent of the consultation zones associated with major hazard installations and MAHPs can be found on the HSE extranet system along with advice on HSE's land-use planning policy. Lists of all major hazard installations and MAHPs, consultation zone maps for installations, and consultation distances for MAHPs are included to aid planners. All planning authorities should have an authorised administrator who can access the HSE's Planning Advice for Developments near Hazardous Installations Information Package (PADHI+) on the extranet; further information is available on the HSE website: <http://www.hse.gov.uk/landuseplanning/padhi.htm>. When sufficient information on the location and use class of sites becomes available at the pre-planning stages of your local plan, the use of PADHI+ could assist you in making informed planning decisions about development compatibility. We recommend that for speculative testing of advice that the PADHI+ training database is used. This is accessed on the land-use planning extranet services screen.

Officer response:

Comment noted. Policy SD4 indicates that development will be permitted where it avoids locations that would put the environment, or human health or safety, at unacceptable risk. This includes inappropriate development within HSE consultation zones. Paragraph 2.23 also indicates that, where necessary, the Council will consult the HSE on proposals which fall within the HSE consultation zone and advises that applicants should contact the relevant authority for information on consultation zones.

Comment summary:

This site drains to a watercourse which is culverted through Redcar to Coatham Marsh. It is therefore recommended that this policy includes the requirement to protect and restore the natural environment such as restoring local watercourses and de-culverting. Part of the site is located within a historic landfill site. The landfill which intersects this site was known as Kirkleatham Landscaping Mounds (Waste Disposal Licence CLE401) and was operated by Ballast Wiltshire Plc between 1994 and 1997. The surrender of the site was accepted following a comprehensive assessment of the environmental risk, including landfill gas.

Officer response:

Comments noted. The policy will be updated to cover protection and restoration of the natural environment.

Comment summary:

There is no mention of Skelton Green. Over the years we have lost local business and Post Office. We now have the potential for new businesses. We still have the very old wooden lamp columns on the main street in Skelton Green and these are around the existing local pubs and the new businesses. They do not give us a proper quality standard of lighting, their location is close to the road, and they are detrimental to the image of the village. When there are efforts locally to improve the area could the council consider including regeneration in Skelton Green i.e. a standard of lighting which has been a common feature throughout other villages and town in the Borough for many years now.

Officer response:

The policy deals specifically with the regeneration opportunities at Skelton Industrial Estate Extension, other policies within the plan are relevant for Skelton Green. Comments regarding street lighting have been passed on to Council's Area Management Section.

We support references requiring the incorporation of SuDS schemes for new development in policy REG 3, paragraph 4.32. We believe that the reference in paragraph 4.32 to a culvert leading to a water treatment works may be incorrect. It is our understanding that the culvert is not connected to the water treatment works which is treating pumped minewaters.

Officer response:

Acknowledge support for policy. Supporting text will be amended regarding the culvert.

DLP887

Full Name: Michael Hoult

Organisation: Highways Agency

Agent Name:

Agent Organisation:

Submission type: E-Mail

Agree with section?: In Part

Comment summary:

The Agency is supportive of mixed use development, as through locating jobs in close proximity to houses it can help to reduce the need to travel, and thereby contributes towards a reduction in trips on the SRN. The Agency is supportive of utilising the sequential assessment approach included within the policy that should ensure that future developments within the policy do not undermine the existing local centre viability and ensure that development generally takes place in sustainable locations that are accessible by a variety of sustainable modes of transport. This also supports the intention to create a mixed used community, helping to reduce the need to travel, particularly by private car. Overall the policy states that a total 52ha of land are to be allocated for development with up to 400 dwellings to be delivered on the western part of the site, whilst an unstipulated quantum of employment development will be allocated on an extension of the eastern part of the site adjacent to the A174 Skelton and Brotton Bypass. Given the location of this development, it is unlikely that development will have any significant impact on the operation of the SRN, however this will need confirming through a review of the Model Assessment Report and the Agency's strategic road infrastructure study.

Officer response:

Support noted. The scale of development will be determined through planning application(s) and/or masterplan. Highways Agency will be consulted on proposals to ensure acceptable impact on strategic road network.

Section/Policy**Policy REG 3****Skelton****DLP439****Full Name:** Tom Blenkinsop MP**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** In Part**Comment summary:**

Skelton Industrial Estate should not have its use class expanded to include bulky retailing. This would (a) conflict with policy to protect the existing Teesside Park site and (b) similar allocations on Rectory Lane in Guisborough. The car movement parking requirements would also hinder development of the rest of the estate for business or industrial use where unimpeded access is important.

Officer response:

Policy requires proposals for bulky goods retail to follow the sequential assessment approach and impact assessment if above the locally set threshold. Proposals will not be acceptable where they would result in significant adverse impacts on designated centres within and beyond the borough boundaries. Development will be guided by a masterplan for the whole site.

DLP209**Full Name:** Mr S M White**Organisation:** Campaign for the Protection of Rural England (CPRE)**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

If Skelton's vitality and viability is to be maintained then there has to be serious thought given as to which businesses are developed in this area. Already Skelton's shops are suffering a loss of trade due to the opening of Asda, some by 33%. Some shopkeepers feel quite pessimistic about their future. Also, more houses mean more travel therefore more pollution.

Officer response:

Policy already requires proposals for town centre uses to undertake sequential assessment approach and impact assessment, where above locally set threshold in order to protect the vitality and viability of Skelton Local Centre. Housing is proposed as part of mixed use development which will create jobs and improve sustainability.

DLP548**Full Name:****Organisation:** Asda Stores**Agent Name:** Michele Steel**Agent Organisation:** Deloitte LLP**Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Policy REG 3 in the Draft Plan designates a 52 hectare site at Skelton Industrial Estate as a mixed-use regeneration area. The policy states that commercial uses will be supported alongside the existing ASDA superstore, 'where they are compatible with the adjacent uses and would not significantly harm the vitality and viability of Skelton Local Centre.' Long-term residential development is also proposed, including up to 400 dwellings to be delivered from 2024 onwards. ASDA fully supports the proposed designation of Skelton Industrial Estate as a mixed-use development opportunity that will drive significant and important regeneration of the Skelton settlement. ASDA would further request that the ASDA store and adjacent land identified for commercial use be designated in the plan as a new District Centre to serve as a catalyst for this regeneration project. Retail development is widely acknowledged to be highly effective in facilitating development and regeneration; in approving the planning application for ASDA's Skelton store, the Committee Report acknowledges the 'several regeneration and economic benefits' of development and states that the development will help unlock land to the west of the store which could help support additional development. A new District Centre at this location would facilitate further commercial development at this location, as envisaged under Policy REG 3. The designation will also reflect the role that ASDA plays in fulfilling the shopping needs of the local community (existing and proposed) and attracting linked shopping trips to the area. Policy ED 1 includes provision for requiring a Retail Impact Assessment be undertaken to support any development that would increase the floorspace of a centre by 10% or more. This provision affords the Council control over any commercial proposals within the regeneration area to ensure they complement rather than compete with the Skelton High Street Local Centre.

Officer response:

Support noted. Skelton does not have the population to support an additional centre. Skelton Local Centre shall remain the focus for town centre uses within Skelton.

The Loftus District Centre should not be reduced.

Officer response:

Loftus District Centre has been in decline over recent years, partly due to the increased mobility of consumers and the draw of competing larger centres. The centre has a high vacancy rate and there is little demand from prospective businesses. Therefore, in order to positively manage the decline of the centre in accordance with the NPPF, and protect its future vitality and viability, it has been considered necessary to reduce the size of the centre, so that it more accurately reflects the role and function of the district centre now. Whilst the changes would result in the boundaries of the centre becoming smaller, existing units outside of the new district centre boundary could continue to operate as normal.

DLP337**Full Name:** Denise Waring**Organisation:** Redcar Angling**Agent Name:****Agent Organisation:****Submission type:** Other**Agree with section?:** No**Comment summary:**

I live at the eastern end of High Street within the Redcar Town 'Primary Shopping Area'. This retail/residential area, at this end of High Street also contains many pubs, Clubs and takeaways, and if 'Purple Flag' status for excellent management of town centres at night is to be achieved by RCBC, the further and more effective measures need to be put in place to deal with the problems faced by residents from this late night economy. This entails noise, fighting, anti social behaviour, mess etc. All of the many issues need to be addressed not only to improve the situation for residents but to also fulfil the requirement laid out in the Plan. I would ask you to fully include and consider residents in Town Centre planning matters as the local people are the ones who live with the consequences of the decisions made, whether it is to allow another pub or an extension of opening hours to a takeaway.

Officer response:

The eastern part of the High Street is not included in the primary shopping area. The policy seeks to enhance the appearance, safety and environmental quality of the centre. The Council has removed its late opening zone policy, which sought to concentrate late night uses in particular parts of the town centre. Policy SD4 seeks to protect the residential amenity of existing residents from the impact of new development.

DLP383**Full Name:****Organisation:** West Midlands Metropolitan Authority Pension Fund**Agent Name:** David Staniland**Agent Organisation:** Knight Frank LLP**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Our client's planning application for Marske Inn Farm includes associated ancillary uses, which could comprise of neighbourhood shops, services and community facilities. The development will be well connected to Marske District Centre to help improve its vitality and viability. Our client considers that, although the NPPF allows for local planning authorities to set local thresholds, there should not be blanket thresholds applied to the entire borough, particularly when the proposed thresholds are significantly lower than those suggested in the NPPF. It is acknowledged that the Redcar and Cleveland Strategic Retail, Leisure and Office Study (2011) indicates that the borough's centres are currently trading below capacity, but this statement is a generalisation. Marske is well served by existing local services and shops in the District Centre and it is considered that the thresholds here should follow those set out within the NPPF.

Officer response:

Policy H3.1 includes the site at Marske Inn Farm as a proposed housing allocation and recognises the requirement for community facilities to be provided as part of the scheme. The locally set thresholds are based on a robust evidence base provided by the Strategic Retail, Leisure and Office Study Update (2011).

Section/Policy**Policy ED 1****Protecting and Enhancing the Borough's Centres****DLP328****Full Name:** Francis Owens**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

Section/Policy**Policy ED 1****Protecting and Enhancing the Boroughs' Centres****DLP549****Full Name:****Organisation:** Asda Stores**Agent Name:** Michele Steel**Agent Organisation:** Deloitte LLP**Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

ASDA proposes that its South Bank and Skelton Stores be designated as part of District Centres within this hierarchy, recognising the important role these retail destinations play in serving local communities, retaining expenditure within Redcar and Cleveland, and stimulating development and regeneration. ASDA also supports the continued Local Centre designation of its Redcar store. ASDA strongly supports the continued designation of Redcar, Roseberry Square as a Local Centre in the new Plan. This designation reflects the important role that the shops and services, including ASDA, play in the local community at this location. ASDA supports Policy ED 1's commitment to maintain and strengthen local centres to better serve the local economy. The Policy also recognises the importance of neighbourhood shops, services and community facilities located outwith the borough's centres, committing to protect these, 'where they are important to the day-to-day needs of local communities.' In this regard, should the Council choose not to re-designate ASDA's stores at South Bank and Skelton to form part of District Centres, then it is requested that they be identified on the proposals map as retail locations to ensure that they are afforded adequate protection as intended in this policy.

Officer response:

It is not proposed to include ASDA's Skelton and South Bank stores as part of district centres within the retail hierarchy. There are already local and district centres established in both settlements which provide a range of shops and services to meet the needs of their respective communities. Whilst the role that these ASDA supermarkets play in meeting the weekly shopping needs of local residents is recognised, it is not proposed to identify these sites on the proposals map as retail locations.

DLP1837**Full Name:** Mr Oliver Mitchell**Organisation:** Planware Ltd**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Object to the policy. It is not consistent with the NPPF as it is not positively prepared, justified, effective or consistent with the framework. The 5% threshold is too low and will restrict growth. The policy takes a blanket approach and does not allow for each case to be considered on its own merits. The policy applies to all A5 uses and does not consider the menu on offer or the services provided by the operator. No consideration has been given to the potential negative impact that the policy may have on the local community, employment provision or to sustainability. No consideration has been given to the conflict between this policy and the sequential approach set out in the plan and the NPPF. The policy is therefore not sound.

Officer response:

The policy has been prepared using the recommendations of the Redcar & Cleveland Strategic Retail, Leisure and Office Study Update (2011). The Council recognises the contribution that hot food takeaways can make towards the local economy and that designated centres will generally provide the most suitable locations for such uses. However, the need for additional hot food takeaways has to be carefully balanced against the need to protect centres from an over-proliferation of such uses, which can impact upon their vitality and viability. It is considered that 5% would set a reasonable threshold, above which, any further hot food takeaways would likely cause harm to a centre's vitality and viability. It is considered that the policy fully accords with the NPPF, as it has been positively prepared by trying to balance the need for hot food takeaways as part of an appropriate mix of uses within a centre against the need to protect the vitality and viability of the centre from an over-proliferation of hot food takeaways.

Whilst the Agency understands that sometimes retail development on industrial estates and business parks needs to occur, careful consideration should be made of the trips associated with such proposals and the differing trip patterns that would result as a consequence. Proposals for retail uses on employment sites that could affect the SRN will need to ensure that they are capable of being accommodated on the network or can be mitigated to alleviate their affect. In such instances, consultation with the Agency at the earliest opportunity would be recommended.

Officer response:

Comments noted. The impact of development on the strategic road network will be determined as part of the planning application process and the Highways Agency will be consulted on any significant planning applications.

Comment summary:

Light pollution can have a negative impact on nature conservation (especially for bats and invertebrates) therefore in reference to Policy ED5: Advertisements, (and in particular criteria F; 'where illumination is proposed') Natural England would urge the consideration of the effects on protected species.

Officer response:

The NPPF indicates that advertisements should be subject to control only in the interests of amenity and public safety, taking account of cumulative impacts. It is therefore not possible to make reference to the potential impacts of light pollution of nature conservation within the advertisements policy. However, reference has been included with regard to light pollution and its potential impacts in Policy SD4.

Development up to the boundary of the Teesmouth and Cleveland Coast SPA and Ramsar site and in sensitive surrounding areas is unlikely to meet the requirements of the HRA, through likely displacement effects on adjacent land, and through loss of functional areas beyond the designated area, which support notified bird populations. It is likely that difficulties would be encountered identifying and securing suitable mitigation for any such adverse effects. There is a need to identify potential adverse effects on the integrity of the Teesmouth and Cleveland Coast SPA, which should include in-combination effects, and other designated sites and secure any necessary mitigation measures in advance of development. This could be better met through a strategic masterplan for the conservation and enhancement of biodiversity assets potentially affected by the local plan, including identification of strategic mitigation for development allocations. Object to paragraph 5.37. Please add 'alone, or in combination with other development, plans or projects.' The wording 'no significant adverse impact' should be replaced with 'no adverse effects'.

Officer response:**DLP195****Full Name:** Mrs E McCabe**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Other**Agree with section?:** No**Comment summary:**

I would like there to be more emphasis on attracting industries to the area, especially East Cleveland, where the quality of life for some people is declining at a rapid rate and the prospects are poor. Too many young people have had to move out of the area to find employment. There should be more small business on former industrial estates such as Hollybush and Liverton and an emphasis on developing practical skills among young people which would be useful to prospective employers. Actions not words!!

Officer response:

The policy safeguards a range of sites throughout the borough for employment use, including sites in East Cleveland at Skelton, Liverton Mines and Lingdale. The Council's Enterprise Team is committed to supporting existing businesses and those who wish to move to the borough.

DLP614**Full Name:** Cllr Tristan Learoyd**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Lack of thinking over job creation The Local Plan and the Economic Masterplan before it don't mention high tech or niche industry. They don't offer any alternative to the large industrial decline. The Plan mentions the ICI site and steel works as major employers. Yet these industries are declining regionally and nationally. Who exactly will fill the houses being built. Furthermore, the largest housing project offers only 20 part time temporary jobs. The notion of creative industries has already failed in Redcar and doesn't offer enough money to purchase the kind of properties mentioned in the draft plan. The plan is so flawed it needs a complete rewrite. It represents an embarrassment to the council and its residents.

Officer response:

The plan supports economic growth within a wide range of business sectors. The plan recognises that whilst it is important to support the traditional industries within the area, it is also important to diversify the local economy in order to make it more resilient to change. High technology and knowledge driven industries are supported by the plan and directed towards suitable locations at Kirkleatham Business Park and Cleveland Gate Business Park.

Section/Policy**Policy ED 6****Protecting employment areas****DLP1213****Full Name:****Organisation:** The Gisborough Estate**Agent Name:** Mr Rob Close**Agent Organisation:** Strutt & Parker**Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Policy ED 6 seeks to develop and safeguard a number of sites for general industrial uses. These sites do not appear to be shown on any plan or Proposals Map at present. We assume that this will be clarified in the next draft of the Local Plan and we reserve the right to comment once the boundaries have been defined.

Officer response:

The proposed policies map was consulted on alongside the draft Local Plan and showed the extent of the employment land safeguarded under Policy ED6.

DLP893**Full Name:** Michael Hoult**Organisation:** Highways Agency**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

The Agency acknowledges the intentions for further development of the boroughs industrial estates and business parks. The policy identifies 343ha of land to be developed at Wilton International, Tata/SSI steelworks, Teesport and land along the River Tees, and South Tees Eco Park, however the distribution of development across those sites is not identified. In addition the development of 64ha of land for general industrial uses across a number of sites is stated, along with an element of high tech and knowledge driven development at Kirkleatham Business Park and Cleveland Gate Business Park. However, again the detailed distribution of development across all these sites is not stated. The Agency therefore considers that to provide greater clarity regarding the spatial distribution of employment development, that the policy should be amended to detail the quantum of development proposed for each site. Without this information the Agency is unable to clearly ascertain the potential impacts resulting from these proposals and whether such impact would be detrimental to the operation of the SRN and therefore whether mitigation measures would be required. The Agency is keen to ensure that the SRN adequately supports economic growth and such that the impacts of these particular sites are considered appropriately alongside the wider development aspirations of the plan. Again, this should be achievable through a review of the Model Assessment Report and the development of the Agency's Infrastructure Study.

Officer response:

The quantum of development on the safeguarded employment sites over the plan period cannot be predicted with any degree of certainty, as it is heavily reliant on investment decisions by the private sector. However, any impacts of development upon the strategic road network will be carefully considered as part the planning application process and the Highways Agency will be consulted on any significant development which has the potential to impact upon the strategic road network.

DLP724**Full Name:** Lucy Mo**Organisation:** Environment Agency**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

The draft Local Plan makes several references to encouraging investment in recycling. It is also noted that South Tees Eco Park development is considered to be a key priority. Although the Eco Park is located away from residential areas, the council should aspire to attract recyclers and similar green technologies with high environmental standards and low potential nuisance impacts in order to promote and encourage the development of a top quality Eco Park rather than the concentration of waste/recycling facilities which are considered to be bad neighbour sites. Furthermore, it is recommended that developers proposing new industrial plants are encouraged to use Best Available Techniques (BAT) to design waste out of their processes as far as possible and to minimise waste.

Officer response:

The policies for minerals and waste are contained within the Tees Valley Joint Minerals and Waste DPDs, which were adopted in September 2011. It is not intended to replace these policies through the Local Plan.

Section/Policy**Policy ED 6****Protecting employment areas****DLP699**

Full Name: Lucy Mo
Organisation: Environment Agency
Agent Name:
Agent Organisation:
Submission type: E-Mail
Agree with section?: In Part

Comment summary:

We support the overall approach to Enterprise Zones. In particular, we welcome the focus on low carbon sectors such as renewable energy. One area that could be improved is the approach to improving the environment. The draft Local Plan is currently narrowly focused on local and visual impact and should be broadened to include improvements to land, water and habitats. For example, a strategic biodiversity offsetting approach may realise environmental benefits and add certainty to developers, particularly on larger sites where investment may be significant. This would be consistent with the National Planning Policy Framework (NPPF), which states that the planning system should provide 'net gains in biodiversity where possible, contributing to the government's commitment to halt the overall decline in biodiversity'.

Officer response:

Support noted. Policies N2 and N4 of the plan seek to protect and enhance the green infrastructure network and biodiversity and geological resources. These policies will also be updated to take account of additional comments made by the Environment Agency.

DLP525

Full Name:
Organisation: Royal Mail Property Holdings
Agent Name: Janet Entwistle
Agent Organisation: DTZ
Submission type: E-Mail
Agree with section?: In Part

Comment summary:

Royal Mail's Skelton, Guisborough and Redcar Delivery Offices are located on safeguarded employment sites. There is no intention to close or relocate any of these offices. Royal Mail would like to see the policy amended to offer additional protection to existing employment uses, particularly where non compatible uses (such as residential) are proposed nearby.

Officer response:

The policy already safeguards the land for employment uses (B1, B2 and B8). Any proposal for an alternative use must be exceptionally justified as a departure from the development plan and would only be considered acceptable if it was compatible with existing uses.

DLP681

Full Name: Richard Hunt
Organisation: York Potash Ltd
Agent Name:
Agent Organisation:
Submission type: Letter
Agree with section?: In Part

Comment summary:

York Potash supports the Council's stated aim of safeguarding 343ha of employment land but considers that the types of uses set out in the text should be expanded to include logistics infrastructure. Policy LS4 makes reference to logistics uses and it would be helpful if this were correlated to the employment land safeguarding policy so that there is no confusion. Policy ED6, part a, suggests that only chemical and energy related uses will be safeguarded on the Wilton International site. York Potash has negotiated an interest on land within the Wilton International site and is actively promoting its' use for drying and dewatering of its raw mineral product which serves an employment generating function. At present York Potash is not proposing to blend this material and so would fall outside the definition of chemical use. We would like assurances that this type of employment use, which would make use of the power and utilities available on this site, is not precluded or confirmation that, as the final product is likely to be blended prior to final use to create a chemical fertiliser, that this use is considered to be 'chemical related'.

Officer response:

The Policy will be amended to include reference to logistics sector at Teesport, to ensure consistency with Policy LS4. Land at Wilton International will continue to be safeguarded for chemicals and energy related industries, however this does not necessarily preclude other forms of economic development where clearly justified. It is considered that York Potash' proposals could be considered as a chemical related industry, as the processing plant would contribute towards a chemical output.

Section/Policy**Policy ED 6****Protecting employment areas**

DLP438**Full Name:** Tom Blenkinsop MP**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

The Local Plan should ensure that future applications for abattoirs are confined to existing industrial estates and not located near to existing or projected housing. The Local Plan should also recognise the existing allocations for industrial use of land at Liverton Mines. The Local Plan should also recognise Saltburn's role as a creative hub in the Borough.

Officer response:

Proposals for abattoirs will be treated on their own merits as they may be appropriate in locations other than existing employment sites, where they would not result in unacceptable impacts. Policy SD4 will ensure that residential amenity is adequately protected when considering any future proposals where planning permission is required. The policy continues to safeguard Liverton Industrial Estate for employment uses. The supporting text will be amended to make reference to creative industries based in Saltburn.

Section/Policy**Policy ED 7****New Employment Allocations****DLP817****Full Name:** Mr Dave McGuire**Organisation:** Sport England**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Employment Allocation (ED8 on Appendix Inset Map) ED7 (within the body of the Plan). Land adjacent to Skippers Lane. Sport England refutes the Plan's suggestion that The Redcar & Cleveland Playing Pitch Strategy Strategy (2011) indicates that there is a general over provision of 15 adult football pitches and 2.5 mini pitches within the Greater Eston area. The site currently accommodates 4 adult pitches and 2 mini pitches. There would still therefore be adequate playing pitch provision within the area once the these pitches are lost to development. Sport England acknowledges the surpluses of senior and mini football, but these must be balanced against shortfalls of junior football, cricket, and rugby pitches in the Greater Eston area. The overall effect is that there is not a surplus of pitches that warrants disposal. Indeed, the PPS does not therefore recommend the disposal of this site, instead its specific recommendation is 'To address the shortfall of junior pitches RCBC should work with clubs in the area to establish the need for junior pitches and consider the conversion of senior pitches to junior. Work with South Bank Community Football Association to meet minimum Step 7 Ground Grading requirements.

Officer response:

Policy number on appendix insert map will be corrected. It is no longer intended to allocate the site for employment use and the playing pitches will be retained in their existing use. An alternative site at Mannion Park is being proposed instead.

Comment summary:

5.52, I think it should end ', National Trail'. We are fortunate to have one of only 15 National Trails passing through our Borough and hence we should highlight the fact. I also note that no mention is made of the English Coastal Path (ECP) which should be completed through our area next Spring. I anticipate a massive tourism dividend from the ECP which will certainly necessitate the additional accommodation referred to in ED9a. At this juncture I feel reference should also be made to the 'Alternative Coast to Coast' walk which we should be promoting to link into the ECP at Saltburn. (note: the coast to coast is the second most popular long distance walk in the world) I also note that although you suggest new tourism accommodation 'throughout the Borough' your focus only mentions Redcar and Saltburn. I feel this reflects an old fashioned view of tourism.

Officer response:

Reference will be made within the supporting text to the significance of the Cleveland Way National Trail, England Coast Path and an alternative Coast to Coast route passing through the borough and the leisure and tourism opportunities they provide. The policy seeks to promote new tourism accommodation in Saltburn and Redcar in recognition that these are the most well-established tourist destinations, however it does not preclude tourist accommodation in other areas of the borough.

Comment summary:

If the proposal to promote tourism in Guisborough, Saltburn and East Cleveland is to be a success then we have to ensure that these areas firstly remain an attractive option for visitors, then improved upon. This will not happen if we allow a proliferation of wind turbines to develop in important scenic areas eg Eston Hills, Beacon Moor. The Council should aim to site wind turbines on industrial land. Also, we need to retain a significant area of green space, not become a concrete jungle of housing estates.

Officer response:

Policy SD6 sets out the Council's policy for renewable energy, including wind turbines. The policy strongly supports renewable energy schemes within the urban industrial areas. In the rural areas, the policy indicates that proposals for renewable energy will not be allowed within, or where they impact upon, nationally protected landscape areas or Sensitive Landscape Areas unless they meet the exceptions criteria set out in Policy N1. The plan contains a wide range of protected open spaces and Policies SD2 and SD3 seek to ensure that development is focussed within the most sustainable locations.

Comment summary:

Developments outside of publicly sewerred areas risk deterioration of the quality of watercourses, particularly caravan parks and hotels that create significant pollutant loadings. While typical sewage treatment can reduce this polluting load, it will not remove all bacteria. The Local Plan should therefore encourage coastal developments to connect to the public sewer system where possible. This policy also suggests that these types of developments are unlikely to be located in close proximity to a main foul sewer and would therefore require alternative means of sewage disposal. Where this is the case, an Environmental Permit would be required from the Environment Agency. The siting of caravan sites and tourist accommodation should be located outside areas at risk from flooding. We would therefore support references to flood risk mitigation and the need to located development outside flood zones within this policy.

Officer response:

The supporting text will be amended to indicate that sewage from sites should be connected to the existing network, where possible. Where alternative forms of sewage are required an Environmental Permit will be required from the Environment Agency. The policy will be amended to indicate that proposals for caravan and tourist sites will not be permitted in flood risk areas.

Policy ED11: New Hotel and Guest House Accommodation sets out the criteria for new hotels and guest houses. The HRA indicates sites in close proximity to Natura 2000 sites are a possibility, the potential increase in visitor numbers to these sensitive areas is a concern to Natural England. Policy Option ED11a: New Hotel and Guest House Accommodation provides an option to include specific policy covering areas where there are issues of high concentration of hotel and guest houses. If this option were to be progressed, it could specifically address the local designated sites and environmental concerns.

Officer response:

The policy seeks to allow for the conversion of residential accommodation to guest/boarding houses and new hotels. Due to the limited number of buildings that would be suitable for conversion, it is not anticipated that the policy would result in a significant increase in the provision of hotel and guest house accommodation. Therefore it is unlikely that the policy would result in adverse impacts upon protected sites. The Council has not progressed Option ED 11a.

Comment summary:

Policy ED 11 states that proposals for new hotel accommodation will be required to follow the sequential approach to site selection, with proposals for new hotel accommodation being particularly directed to sites within Redcar and Saltburn. Our client considers that Policy ED 11 should be more flexible and should make provision for new hotel accommodation in other locations. Hotel development should not be restricted to only Redcar and Saltburn. The NPPF identifies hotels as being suitable for town centre uses. Saltburn is identified in the Draft Local Plan as an East Cleveland Town. In the settlement hierarchy this is on the third tier and there are several locations, particularly conurbations, which are considered to be more suitable. A hotel proposal in Saltburn would therefore fail the sequential test. Restricting hotel development to Redcar and Saltburn, whilst applying a sequential test, is a flawed approach.

Officer response:

The sequential assessment approach seeks to direct proposals for town centre uses to existing town and district centres. The policy highlights the potential for new hotel and guest house accommodation in Redcar and Saltburn as these are the areas of the borough which have the most well-established tourist areas, however, this does not preclude suitable development elsewhere within the borough.

DLP648**Full Name:** Mr John Wilkinson**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

There seems to be a considerable amount of 'commissioning' of consultants to undertake work and I wonder how much this has cost with outside consultants being employed and not making sufficient use of our own staff? it's not as if we have money in the budget to provide some of our more basic services and nothing over last 10 years of housebuilding has stopped outward migration or attracted sufficient long term employment to warranty housing numbers. If the 15% affordable housing threshold is to be accepted based on all the so called evidence, why reduce numbers of affordable housing on any site like the WMPF Outline Planning Application for example, when you could admit, again, this is another attempt at cash raising to plough more money into key projects in Greater Eston which have already historically failed?

Officer response:

The borough has a relatively high proportion of retired (65+) people, a falling working age population and a particularly low birth rate compared to nearby local authorities. The latest ONS population projections, the 2011-21 interim figures, indicate that this trend will accelerate with the 16-64 population falling by 6.5% and a significant increase in the 65+ population by 20%. The plan seeks to address these issues as they could have negative implications for the local economy and the development of sustainable balanced communities including the ability to meet the demand for public services. Consultants have been used to prepare background evidence in some instances where it was considered to be time and/or cost effective to do so, or where it was deemed necessary to draw on their specialist expertise to ensure that the Council has a robust and credible evidence base. Policy H4 seeks to ensure that a minimum of 15% affordable housing is provided on all developments of 15 dwellings or more, including the Marske Inn Farm site.

Housing Requirements and Delivery Phasing

DLP429		Comment summary:
Full Name:	Craig Barnes	<p>Gladman believe that there are several problems with the use of the 2011 Interim ONS Household Projections as a basis of setting the housing requirement and their use, should be treated with caution. Firstly, these projections only consider a 10 year period and therefore do not project for the entire plan period to 2028/29. This means that the plan lacks any supporting demographic evidence base for nearly half of the plan period. Secondly, these projections are trend based. Much of the information that informs these projections are based during the period of the recent economic recession, this means that they are likely to be heavily influenced by short term issues affecting the housing market and economy, the result of which may produce underestimates in the actual need of the borough. Although the local economy and housing market is far from recovered to pre-recession levels, the implementation of a housing requirement for the entire plan period that is based on evidence from the recession means that the plan is potentially overly pessimistic. Gladman accept that the plan does seek to accommodate a further 1,050 dwellings on top of this baseline to meet economic growth and balance migration, however to establish a requirement against a baseline that is too low in the first place would see a greater potential for the demographic and economic needs of the borough not being achieved, thus being counterproductive to the plans objectives. When considered against the fact that the plan will only achieve the delivery of 55% of the identified annual affordable need outlined in the 2012 Tees Valley SHMA, the establishment of a higher baseline would have additional benefits for the borough. The proposed housing requirement is also inadequate on the basis that it does not account for under delivery experienced since the start of the Core Strategy. Gladman believe that any shortfall should be dealt with within a five year period adopting the Sedgfield approach as this would be consistent with the Framework in significantly boosting housing supply. The application of a 20% buffer taken from the end of the plan period should also be applied to the first five years of the plan period to 'provide a realistic prospect of achieving the planned supply and to ensure choice and competition in the market for land' (Â§47, The Framework). The Council accept in the five year land supply note that Redcar and Cleveland is a 20% authority as the Core Strategy requirement was only achieved twice in eight years. However it is clear that this has not been applied to the local plan requirement. H1 goes onto identify current commitments and preferred housing sites amounting to some 4,350 dwellings "an over allocation of approximately 300 dwellings (of approximately 7.5%). Gladman believe that the existing mix of sites and the housing trajectory supporting this strategy is sound, with sufficient flexibility within the trajectory to account for the delay of brownfield/SUEs and facilitate market choice. But there is some potential that the plan could under deliver when demolitions are taken into account. Despite the realistic approach applied in allocating sites by the Borough Council, Gladman believe that the level lacks the flexibility to account for the quantum of demolitions experienced across the borough. Should the rate of demolitions in the borough continue at a rate anywhere near recent levels the net completion rate of the borough will suffer as experienced against the adopted Core Strategy. The identification of a gross target of 4,500 dwellings in the Draft Local Plan, due to its recommendation as outlined in the housing background paper published in September 2013 (see page 39 of the background paper), underlines the Councils anticipation that demolitions will continue into the plan period. The plan should therefore allocate sufficiently to prevent any shortfall in delivery being experienced in the plan period. H1 also includes a table that seeks to divide the delivery of the plan into phases. The table identifies that the plan will deliver 1,350 dwellings in each identified five year period. Gladman question the inclusion of this table as it does not raise or lower the annual requirement. Gladman believe that the sole purpose of this phasing is to constraining delivery to 1,350 dwellings for each period. Gladman object to this and convey to the Council that development that is suitable and available now should be able to contribute to meeting the housing needs of the district subject to environmental and infrastructure requirements being fulfilled. The combination of the requirement to maintain a five year supply of housing land alongside section Â§47 of the framework, and over allocation of sites will ensure that the plan is flexible and responsive to under delivery. Reference to phasing should therefore be deleted.</p>

Officer response:

In conformity with national policy, the latest official household projections have been used as a starting point in assessing the housing requirement, and they assume the basis of the requirement. As the projections are interim figures and only run for 10 years to 2021 it is acknowledged that the figures should be checked after more complete household and population projections are released during 2014. At the same time, it is also recognised that the preferred minimum requirement of 270 exceeds both the interim figures and the previous set of household growth projections for 2008-2033 which reflected a period of economic buoyancy. Any necessary adjustments to the requirement resulting from revised projections may therefore be relatively minor. The preferred (minimum) housing requirement strikes a balance between aspiration and achievability. Planning for development in excess of household growth (potentially by up to 50%) has enabled the identification of a wide range of sites to extend housing choice which will significantly increase net housing supply to support economic growth projections and aspirations and the development of more sustainable communities in addition to meeting the needs of the existing population. With regard to the supply backlog, because the undersupply is broadly commensurate with levels of population loss as recorded by the 2011 Census, any evidence of pent-up demand may be limited and as such it may be difficult to justify its inclusion within the requirement. The 10% buffer has been included to allow for any net stock losses or delays in bringing sites forward for development. The figure of 10% was deemed appropriate following consideration of anticipated reductions in clearance levels, the potential for net losses to be offset elsewhere by small windfall developments, the range, location and delivery profile of the preferred sites and current commitments and the relatively high net target proposed in the plan. The level of supply included in the first delivery phase to 2018/19 is sufficient to meet the minimum requirement plus a 20% buffer. In addition to this is the potential for around 1,000 dwellings after year 15. The plan therefore allows for the flexible delivery of housing supply. The requirement has been phased equitably across the plan period in order to promote the balanced distribution of housing delivery and in order to manage supply. Further detail has been given at Para. 6.14 of the draft plan.

Comment summary:

Questions relationship between housing and population retention and economic development. Highlights lack of jobs in the area.

Officer response:

Although the labour market has contracted in recent years, the borough contains key employment sites which are at the forefront of the economic strategies being led by Tees Valley Unlimited and the Borough Council and have the potential to generate significant investment and jobs growth in key expanding sectors such as advanced manufacturing, 'green' energy and logistics. Furthermore, recent employment projections as set out in the supporting Employment Land Review indicate that employment levels may recover towards pre-recession levels over the plan period (an increase of about 5,000-6,000 jobs). At the same time, the working age population is projected to decline, which could therefore increase employment opportunities. Analysis of more recent ONS population projections (the 2011-2021 interim figures) indicates that the population decline may stabilise by 2021. However, the growing imbalance between working age and retired people is expected to continue which could undermine the development of balanced and sustainable communities with potentially negative implications for maintaining public services and the local economy. The plan has sought to have regard to these key social and economic issues by planning for a level of residential development which exceeds recent household growth projections but falls within typical housebuilding levels. The prospective turnaround in employment numbers needs to be seen within the context of the projected decline in the working age population and and therefore the potential impact on labour demand, reducing unemployment and in-migration prospects over the plan period. The reference to 14,000 jobs is in regard to the headline figure in the Council's Regeneration Masterplan. Although not quoted in the policy or draft plan itself, reference has been made to this in the supporting Housing Background Evidence Paper which stresses that as this is a gross target, and as such it should not be treated as a robust indicator of labour market growth expectations in the borough over the plan period.

Comment summary:

Paragraph 6.2 states : Housing is intrinsically linked to population retention and economic growth and if we do not deliver sufficient housing, of the right type in the right areas, there is a risk that we will continue to see population decline in Redcar and Cleveland .What evidence is there that an assumed housing shortage is contributing to population decline? Paragraph 6.4 states: The NPPF confirms that housing requirements should be determined through Local Plans and be aspirational but realistic, and based on an objective assessment of need.The figures ONS projections as quotes anticipate growth of 200 households per annum yet the draft plan is anticipating a figure of 270 an increase of some 35%. The reasons given for this increase in paragraphs 6.4 -6.14 are illogical and at odd with the current climate of local government cuts. It is not appropriate to have a local plan that is wholly aspirational.

Officer response:

The borough has been steadily losing population in recent decades due to out-migration, a significant proportion of which has been to neighbouring local authorities. Locally, population increases have been experienced in wards with higher levels of housing development while wards where development has been limited have tended to lose population. The majority of the preferred housing requirement reflects the assessed needs of the existing population, drawing on the latest official household growth projections. However, because household projections merely reflect what has happened previously relying on these figures is unlikely to be sufficient to promote the development of more sustainable communities for example by stemming the growing gap between working age and retired people and could, moreover, encourage further out-migration. The objectively assessed requirement of 270 will promote population retention and in-migration and support economic growth projections and aspirations and the development of sustainable, balanced communities. At the same time, the requirement figure falls within historic housebuilding rates and is therefore realistically achievable.

Comment summary:

The plan seems to assume that building houses will bring jobs to the area. Only jobs or a beautiful environment will encourage people to move here. Building thousands of new expensive large houses for an ageing and declining population is completely inappropriate. There are hundreds of houses for sale on the current market, struggling to sell due to 'A continued lack of access to mortgage finance and the requirement for home buyers to provide larger deposits' (Draft Local plan, 2013). I bought my current home in Marske a year ago and EVERY SINGLE property we viewed to buy was currently empty! This does not suggest a demand for buying housing? New houses are often purchased due to the unbeatable deals on finance offered by the developers that buyers cannot get when buying from another owner hoping to move. This means that residents within Redcar and Cleveland hoping to sell their properties are unable to. This can only serve to create further misery for the residents you represent as people only buy new houses, lining the pockets of the developers, who do not invest anything in our area and leaving residents stuck at a certain point on the housing ladder or with a property belonging to relatives who have passed away or had to move into care.

Officer response:

The plan seeks to provide a broad long-term strategy for the sustainable development of the borough, which includes the development and diversification of the local economic base and the conservation of natural assets, alongside the provision of adequate land for housing to meet assessed local housing needs. The housing requirement is based primarily on meeting the current and future needs of the existing population, drawing on the most recent government household growth projections (2011-21 interim projections) which show annual growth of 200 households per annum. The latest official population projections (also 2011-2021 interim figures) indicate that population decline may level out over the decade. However, there is also a growing demographic imbalance between working age and retired people which could undermine the local economy and the delivery of public services. Therefore, in addition to meeting current household growth projections, the preferred annual requirement of 270 dwellings seeks to support economic growth projections and aspirations and the development of more sustainable communities by improving the overall housing offer to encourage population retention and in-migration. Because the housing requirement is based on meeting an identified need for additional housing over a long period, this should not adversely affect the normal operation of the wider residential market.

Housing Requirements and Delivery Phasing

DLP952

Full Name: G M Collins

Organisation:

Agent Name: GVA Grimley Ltd.

Agent Organisation: GVA

Submission type: E-Mail

Agree with section?: No

Comment summary:

We object to draft Policy H1 and consider that the Council has significantly underestimated the number of new homes required over the new LP period to meet full, objectively assessed housing need as required by the NPPF. The draft policy states that the Council is required to deliver 4,050 dwellings over the plan period. We consider this to be a significant underestimate. In this regard the DLP proposes to carry forward the housing requirement of the adopted Redcar and Cleveland Core Strategy (CS, 2007). The CS housing requirement is based upon needs identified in the 1990's and therefore is out of date; a fact recognised by the Secretary of State in the recent Guisborough appeal decision. In GVA's view it would therefore be unsound to roll the CS housing requirement forward into the new LP. Furthermore, as confirmed by the Secretary of State in the appeal decision, there has been a significant shortfall in historic housing completions relative to the housing requirement since 2004. In accordance with the methodology advocated by the Secretary of State in the appeal decision, GVA has calculated the undersupply between 2004 and 2012 as 1,931 dwellings against the Regional Strategy (RS) housing requirement (using completion figures from the Council's Annual Monitoring Reports). Against the CS requirement, there is an undersupply of 1,566 dwellings over the same period. In GVA's view, in order to be sound, these unmet housing needs, or backlog, should be fully reflected in the housing requirement of the new LP. This does not appear to be the case based upon the information and the draft housing requirement proposed in the DLP. The draft National Planning Practice Guidance (NPPG) recognises the impact that historic housing delivery can have on household formation rates. It states that an objective assessment of housing need should make adjustments to reflect the consequences of past under-delivery of housing. Historic under-delivery in Redcar and Cleveland will have reduced household formation rates and increased out-migration from the Borough. This will have artificially impacted on population trends and projections causing an artificially negative outlook in Office of National Statistics figures. The draft NPPG states that remedial action should be undertaken to address this situation and an upward adjustment to the housing requirement made to improve household formation rates in line with their natural unrestricted state. It is considered that an upward adjustment of at least 50% should be made to the housing requirement of 270 dwellings per annum. This would reflect the fact that since 2004 the Council has under-delivered by over 64% against the RS and 59% against the CS. Given the above, it is considered that the Council should increase the DLP's housing requirement beyond that currently proposed; the requirement should reflect full, objectively assessed housing needs as evidenced by an up-to-date Strategic Housing Market Assessment. In GVA's view, this will require additional sites to be allocated for housing development in order to satisfy the requirement throughout the plan period.

Officer response:

The assessment of need has been carried out in accordance with national policy, with household growth projections (which are relatively low) assuming the starting point. The minimum requirement is coincidentally the same as the current figure in the Core Strategy. Planning for a level of development which exceeds household growth projections (potentially by up to 50%) has enabled the identification of a wide range of sites and opportunities to enhance the overall housing offer and will, in accordance with the NPPF policy, significantly increase annual net supply. The preferred requirement exceeds household projections and will therefore support economic growth projections and aspirations and the development of more sustainable and balanced communities. With regard to the backlog against RS targets, because the undersupply is broadly commensurate with levels of population loss as recorded by the 2011 Census, any evidence of pent-up demand may be limited and as such it may be difficult to justify its inclusion within the requirement. Following on from this, increasing the figure by at least 50% (to 400 dwellings net per annum) is not supported. The revised requirement would be more than double the latest household projections and without further supporting evidence of need, it would be difficult to justify objectively through the plan-making process and would exceed the annual RS requirement (340) which itself was predicated on a high economic growth rate which has not materialised. It is also questionable whether such a level of development could be realistically sustained over the plan period based on historic performance, and it would require significant additional greenfield allocations which could undermine the deliverability of some preferred allocations and the sustainable development of the borough.

Housing Requirements and Delivery Phasing

DLP424

Full Name: James Reid
Organisation: Barratt Developments Plc
Agent Name:
Agent Organisation:
Submission type: E-Mail
Agree with section?: No

Comment summary:

BDW does not consider the housing requirement of Policy H1 to be suitably aspirational in accordance with paragraph 154 of the NPPF. The now revoked Regional Strategy (RS) required an average of 340 dwellings net per annum. The Draft proposes a lower net annual requirement of 270, which constitutes a 1,050 dwelling reduction over the plan period. This is not in conformity with NPPF requirements to 'boost significantly' the supply of housing. BDW acknowledges the RS was developed with an aspiration for high levels of growth within the North East which has not been met by Redcar and Cleveland. Although net delivery rates fell significantly short of RS targets, gross completions averaged 328 per annum between 2003 and 2013. This encourages BDW to believe house building can achieve significant levels of output beyond the annual target proposed by Policy H1. Given that the 'Housing Supply Requirements & Site Allocations' background paper anticipates the number of demolitions to decrease throughout the plan period, we suggest a target similar to that of the RS can be achieved. We note that within the Council's Regeneration Masterplan an aspirational target of 14,000 new jobs was set over the duration of the plan period. Table 2.10 of the background housing paper considers the implications of employment growth on household growth and the local plan requirement. The provision of 14,000 jobs over the plan period would equate to an annual housing target of 340 net additional dwellings. Given the evidence above regarding past completions we consider this target aspirational yet realistic in line with paragraph 154 of the NPPF. The proposed housing target does not account for the significant backlog demonstrated by the background housing paper and 2012 AMR against the current housing requirement of the 2007 Core Strategy. The NPPF requires a 20% buffer to be applied to the housing requirement where there has been persistent undersupply. The draft NPPG goes further, to recommend that past undersupply is met within the first 5 years of the plan, which is supported by a series of recent appeal decisions.

Officer response:

The assessed requirement is in conformity with the NPPF as it would result in a significant increase in net additional housing supply than has been the case during the RS period and over recent decades. The requirement exceeds the most recent household growth projections in order to support economic growth projections and aspirations and the development of more sustainable, balanced communities. The RS figures relate to a markedly different timeframe from 2004 to 2021 and relied on an evidence base which is now outdated, particularly as it was predicated on a high economic growth rate which has not materialised. Gross completions over the LDF period have been unusually high, boosted by unprecedented credit availability which fuelled the housing boom preceding the 2008 economic downturn. In the three years from 2006/07 to 2008/09 gross completions averaged over 490 units per annum, which has distorted the overall figures. Over the rest of the 2004 to 2013 period the average was 277 units. During the recession, completions have been heavily underpinned by high levels of grant funding including a large proportion of replacement housing. In line with ongoing austerity cuts, similar levels of funding may not be made available for some years. As noted in the Background Evidence Paper, the aspirational target of 14,000 jobs in the Redcar & Cleveland Regeneration Masterplan is a gross figure. As such, it should not be treated as a reliable indicator of potential labour market expansion within the borough over the plan period. With regard to the supply backlog, because the undersupply is broadly commensurate with levels of population loss as recorded by the 2011 Census, any evidence of pent-up demand may be limited and as such it may be difficult to justify its inclusion within the requirement. The level of supply included in the first delivery phase is sufficient to meet the minimum requirement plus a 20% buffer.

Section/Policy**Policy H 1****Housing Requirements and Delivery Phasing**

DLP1277

Full Name: Mr Iain Pay
Organisation: Taylor Wimpey North Yorkshire
Agent Name: Mr Ian Lyle
Agent Organisation: England & Lyle
Submission type: E-Mail

Comment summary:

The housing requirement will not meet the objectively assessed housing needs of the borough. It also does not seek to significantly boost housing supply which is a key requirement of the NPPF. The housing requirement does not align with the Council's economic aspirations as set out in the Regeneration Masterplan. Research by Barton Wilmore (included in submission) shows a housing requirement of 633-1,118 net additional units per annum is needed to meet economic aspirations and 320 units per annum to stabilise population. Housing requirement does not take account past under-delivery. There has been no clear demonstration of cross boundary working.

Officer response:

In accordance with national policy, household growth projections (which are relatively low) have assumed the starting point for assessing need. The plan identifies a requirement in excess of annual household projections and a wide range of sites which will, in line with the NPPF, significantly increase net housing supply and extend housing choice over the plan period, thereby supporting economic growth projections and aspirations and the achievement of more sustainable and balanced communities. As noted in the supporting Housing Background Evidence Paper, the aspirational target of 14,000 jobs in the Redcar & Cleveland Regeneration Masterplan is a gross figure and as such it should not be treated as a reliable indicator of potential labour market expansion within the borough over the plan period. As such, the Barton Wilmore figures are not supported, and would appear to be unrealistic and unachievable. With regard to the backlog, because the undersupply is broadly commensurate with levels of population loss as recorded by the 2011 Census, any evidence of pent-up demand may be limited and as such it may be difficult to justify its inclusion within the requirement. In preparing the draft plan the authority has undertaken joint working with other Tees Valley boroughs in preparing the SHMA and strategic transport modelling study and with Middlesbrough Council in undertaking an independent evaluation of plan viability. The Council continues to liaise and work with adjacent local authorities as part of the Duty Co-operate. as noted at Para 1.15, a Duty Co-operate Statement will accompany the publication version of the plan.

Comment summary:

The housing requirement is not based on a robust evidence base. The RS requirement is the most recently robustly tested evidenced based housing requirement for the borough and should provide the basis for the housing requirement. This revised requirement is approximately 1000 more dwellings than that suggested in the Draft Local Plan. This is, aspirational, realistic and achievable if the Council as a consequence seek to allocates sufficient land for housing in locations where people want to live. The comparatively low level of house building in the Borough in recent years is not just due to market forces but the hiatus in allocations and supply resulting from the Councils failure to adopt a 'site allocations' plan and , until recently, its resistance to development beyond Development Limits boundaries.

Officer response:

The assessment of need has been carried out in accordance with national policy guidance, with household growth projections (which are relatively low) assuming the starting point. The plan identifies a requirement in excess of annual household projections and a wide range of sites which will significantly increase net housing supply and extend housing choice over the plan period, thereby supporting economic growth projections and aspirations and the achievement of a more stable and balanced population. The view that the requirement should adhere to RS targets is not supported. The RS has been revoked and notwithstanding that the figures lack credibility as they are outdated and were predicated on achieving a level of regional economic growth which has not materialised and is unlikely to do so over the remainder of that particular plan period to 2021. During the LDF period, the low level of (net) completions was due primarily to an unusually high level of stock clearance associated with housing renewal schemes. Net losses averaged 174 units per annum between 2003 and 2013.

Comment summary:

The projections for numbers of houses are greater than the actual need, at 275 a year. We agree with the Department of Communities and Local Government (DCLG) and The Office for National Statistics (ONS), which states that this Borough needs only 200 per year.

Officer response:

National policy guidance advises that official projections should provide the starting point for considering housing requirements. They do not therefore necessarily represent a final figure or the 'objective assessment of need' as required by government policy. The household projections merely reflect what has happened over the last five years. As such, they are inadequate because they do not take into account economic growth projections and objectives and will not support the development of more sustainable communities. Furthermore, basing the requirement entirely on the household growth figures would not result in the significant increase in housing supply sought through national policy and could encourage further out-migration. The assessed requirement of 270 is intended to address the housing needs of the existing population and support the sustainable development of the borough bearing in mind the falling working-age population and the projected employment growth.

DLP386**Full Name:****Organisation:** West Midlands
Metropolitan Authority
Pension Fund**Agent Name:** David Staniland**Agent Organisation:** Knight Frank LLP**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

The net minimum requirement figure of 270 dwellings per annum is insufficiently ambitious and should not be determined by consideration of maintaining a deliverable five-year housing land supply. The requirement should be increased to 300 which would be more in line with the RSS which was founded on a robust evidence base. The policy is insufficiently flexible to respond to market changes and, to guard against under-delivery, the requirement should be revised to include an additional (10%) buffer on the identification of reserve sites. There is an overreliance on commitments in identifying supply.

Officer response:

In accordance with national policy, household growth projections have assumed the starting point for assessing housing need. The plan identifies a requirement in excess of annual household projections and a wide range of sites which will enable a significant increase in net housing supply and extend housing choice over the plan period. In addition to the 10% buffer, the delivery projections indicate potential for around 1,000 further dwellings after year 15. The policy is therefore seen to be sufficiently aspirational and flexible. The RS figures relate to a markedly different timeframe from 2004 to 2021 and relied on an evidence base which is now outdated, particularly as it was predicated on an economic growth scenario which has not materialised. The proportion of commitments as part of the projected supply is relatively modest (21%) and most of this potential is under development. Therefore the view that there has been an over-reliance on these sites is disputed.

The basis of this plan appears to be that in order to halt net outward migration from the Borough, Redcar and Cleveland needs to build new houses. It presupposes that the building of high end housing in an attractive part of the Borough will itself attract people from outside areas and with them new jobs. Unfortunately the Plan itself accepts that its figures are flawed and that there is no evidence to support the underlying assumptions.

Officer response:

The purpose of the Local Plan is to provide a broad and integrated strategy for the long-term sustainable development of the borough and the conservation of its natural assets. Within this framework, housing and economic growth are critical issues and are inextricably linked. The assessed housing requirement is based primarily on meeting the current and future needs of the existing population, drawing on the most recent government household growth projections (2011-21 interim projections) which show annual growth of 200 households per annum. The latest official population projections (also 2011-2021 interim figures) indicate that the population may stabilise over the decade. However, there is also a growing demographic imbalance between working age and retired people which could undermine the local economy and the delivery of public services. Therefore, in addition to meeting current household growth projections, the preferred annual requirement of 270 dwellings per annum seeks to support employment growth projections and aspirations and the development of more sustainable communities by improving the overall housing offer to encourage population retention and in-migration.

The plan says there is a demand for additional dwellings but throughout the borough there are numerous dwellings for sale and many have been for months or even years. Most of the new dwellings near Hummersea School in Loftus are not selling. Population figures are declining, not increasing. Our local surgery numbers have declined so much that a doctor who has left is not being replaced.

Officer response:

There is an identified need to provide new housing in addition to the existing stock primarily due to the ongoing increase in the number of households within the borough. Household growth is being driven by a decrease in average household size as more people choose to live alone, and by higher life expectancy. As the requirement figure reflects the assessed need for additional housing, this should not affect the normal operation of the housing market. The latest official population projections (the 2011-2021 interim figures) indicate that the population may stabilise over the decade. It is an objective of the plan to support the development of sustainable and balanced communities through meeting the needs of the existing population and encouraging in-migration. This in turn will support the viability of public services.

Comment summary:

Fundamentally disagree with paragraphs 6.1 and 6.2 in relation to housing needs and sustainable development. Jobs are required first, or at the same time. This only applies if the 'economically active' have jobs to go to. Before this scale of development takes place you need to ensure that the existing housing stock is saleable, new stock is built on brownfield sites and there is demand for this sustained by new jobs. None of this appears to be in the plan as far as I can see. Either the population is declining through 'out migration' or 'the local labour market may expand with additional employment opportunities emerging'.. so 'the housing requirement should allow for an increase in housing demand due to prospective economic growth'. You hardly sound convinced!!!! You should wait until the housing stock and brownfield sites are used up and the evidence is there rather than wished for!

Officer response:

The purpose of the Local Plan is to provide a broad strategy to secure the long-term sustainable development of the borough, including employment growth, and the conservation of its natural assets. Within this framework, housing and economic growth are critical issues which are inextricably linked and occur simultaneously. The plan contains policies intended to encourage investment to develop and diversify the local economic base, alongside those which seek to meet assessed housing needs. Although the labour market has contracted in recent years, the borough contains key employment sites which are at the forefront of the economic strategies being led by Tees Valley Unlimited and the Borough Council and have the potential to generate significant investment and jobs growth in key expanding sectors such as advanced manufacturing, 'green' energy and logistics. Furthermore, recent employment projections as set out in the supporting Employment Land Review indicate that employment levels may recover towards pre-recession levels over the plan period (an increase of about 5,000-6,000 jobs). At the same time, the working age population is projected to decline, which could therefore increase employment opportunities. Further analysis of economic and employment issues has been set out in the Housing Supply Requirements and Site Allocations Background Evidence Paper which accompanied the Draft Plan. However, most of the assessed housing requirement is based on meeting the current and future needs of the existing population, drawing on the most recent government household growth projections (2011-21 interim projections) which show annual growth of 200 households per annum as more people choose to live alone and life expectancy increases. The latest official population projections (also 2011-2021 interim figures) indicate that population decline may level out over the decade. However, there is also a growing demographic imbalance between working age and retired people which could undermine the local economy and the delivery of public services. Therefore, in addition to meeting current household growth projections, the preferred annual requirement of 270 dwellings seeks to support economic growth projections and aspirations and the development of more sustainable communities by improving the overall housing offer to encourage population retention and in-migration. In identifying land for residential development, priority has been given to viable brownfield sites and other vacant land within existing settlement boundaries. However, it has been necessary to include some suitable greenfield sites in sustainable locations in order to meet the assessed need.

Section/Policy**Policy H 1****Housing Requirements and Delivery Phasing**

DLP443**Full Name:** Carole A Simpson**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

The Draft Policy notes that in recent years there has been a westward migration of population out of the borough. People follow jobs, the large employers that formerly existed further east have cut jobs substantially and, with increasing automation, these are unlikely to be replaced. The policy envisages providing for an increased population; this is "Pie in the sky", what is needed is a properly managed decline in population. This will create a more rural atmosphere and is more likely to attract those looking for executive low density housing.

Officer response:

Although the labour market has contracted in recent years, the borough contains key employment sites which are at the forefront of the economic strategies being led by Tees Valley Unlimited and the Borough Council and have the potential to generate significant investment and jobs growth in key expanding sectors such as advanced manufacturing, 'green' energy and logistics. Furthermore, recent employment projections as set out in the supporting Employment Land Review indicate that employment levels may recover towards pre-recession levels over the plan period (an increase of about 5,000-6,000 jobs). At the same time, the working age population is projected to decline, which could therefore increase employment opportunities. Analysis of more recent ONS population projections (the 2011-2021 interim figures) indicates that the population may stabilise by 2021. However, the growing imbalance between working age and retired people could undermine the development of balanced and sustainable communities with potentially negative implications for maintaining public services and the local economy. The plan has sought to have regard to these key social and economic issues by planning for a level of residential development which exceeds recent household growth projections but falls within typical housebuilding levels. Planning for further population decline is not seen as an appropriate strategy as it will not support economic growth projections and aspirations, could promote higher levels of in-commuting and out-migration and is likely to undermine the development of balanced and sustainable communities, which could have negative implications for maintaining public services.

Section/Policy**Policy H 1****Housing Requirements and Delivery Phasing**

DLP269**Full Name:** Mr S Mitchell**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

The plan states that the population of the borough is in long term decline. On that basis alone there is no need to set aside land to build yet more houses as set out in the plan. It is commonly acknowledged that building houses does nothing to stem population outflow.

Officer response:

Going off the latest official household projections (2011-21 Interim figures), most of the housing requirement is needed to meet the projected growth in the number of households within the existing population due to the ongoing decrease in average household size as more people live alone and for longer. Population decline over recent decades, can to a significant extent, be attributed to out-migration, including households relocating to neighbouring boroughs which have experienced higher levels of housing development and have a more extensive housing offer, particularly in terms of larger, higher value properties. The latest official population projections (also 2011-2021 interim figures) indicate that population decline may stabilise over the decade. However, there is also a growing demographic imbalance between working age and retired people which could have negative implications for maintaining public services and for the local economy. Therefore, in addition to meeting current household growth projections the preferred annual requirement of 270 dwellings seeks to support the development of more sustainable and balanced communities and employment growth projections and aspirations through promoting an improved housing offer to encourage population retention and in-migration.

Housing Requirements and Delivery Phasing

DLP150**Full Name:** Mr Paul Booth**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

The council policy seems to be "if you build them, they will come". Given that the area is losing population, there should be proper thought as to why. The area saw a very rapid rise in population with the coming of iron ore mining, then steel, then chemicals. With the decline of those major employers it is inevitable that the working population also declines. First step to stabilise the population is to secure long term employment.

Officer response:

The purpose of the Local Plan is to provide a broad strategy to secure the long-term sustainable development of the borough and the conservation of its natural assets. Within this framework, housing and economic growth are critical issues which are inextricably linked and occur simultaneously. The plan also includes policies intended to encourage investment to develop and diversify the local economic base, alongside those which seek to meet assessed housing needs. Although the labour market has contracted in recent years, the borough contains key employment sites which are at the forefront of the economic strategies being led by Tees Valley Unlimited and the Borough Council and have the potential to generate significant investment and jobs growth in key expanding sectors such as advanced manufacturing, 'green' energy and logistics. Furthermore, recent employment projections, as set out in the supporting Employment Land Review, indicate that employment levels may recover towards pre-recession levels over the plan period (an increase of about 5,000-6,000 jobs). At the same time, the working age population is projected to decline, which could therefore increase employment opportunities. The housing requirement figure is based primarily on meeting official government household growth estimates (200 per annum) arising from the existing population as more people live alone and for longer. The latest population projections (interim figures for 2011 to 2021) indicate that the population may stabilise towards the end of that period. However, the growing demographic imbalance between working age and retired people could undermine local economic development and the delivery of public services. Therefore, in addition to meeting household growth projections, the plan seeks to achieve an appropriate and realistic level of residential development which can also support economic growth projections and objectives and promote the development of more sustainable, balanced communities through encouraging population retention and in-migration.

Comment summary:

The population of the borough is in decline and there is an existing unemployment rate in the R&C area of 11.9%. Current predictions are for a continued fall in population for the foreseeable future and your wish for 'households with executive aspirations' to move to this area will not be achieved when there are so few job prospects. You state that 'There are areas in the Borough with high demand for housing supporting high price range properties. These contrast with areas of virtual market collapse, poor conditions and dereliction. Significant parts of the local market are characterised by obsolete and outdated housing, originally built to provide homes to support an industrial infrastructure that no longer exists. Much of the stock fails to meet the Government's decency standard, and does not meet people's aspirations'. Clearly none of this applies to Marske. Recently, on the website RightMove there were 533 houses for sale within a one mile radius of TS11 You state that you aim to 'diversify employment opportunities'. However, building jobs will be temporary and may well go to established contract teams. Jobs associated with possible hotel and other service industry development will be relatively few and most of them will be minimum wage contracts. You are unable to be specific about where the 3-4,000 new residents will actually find employment.

Officer response:

The Local Plan provides a comprehensive strategy which seeks to balance the sustainable development of the borough alongside the conservation of its natural assets. Within this broad framework, housing development and economic growth are two critical areas which are inextricably linked. The assessed housing requirement is based primarily on meeting the current and future needs of the existing population, drawing on the most recent government household growth projections (2011-21 interim projections) which show annual growth of 200 households per annum. The latest official population projections (also 2011-2021 interim figures) indicate that population decline may level out over the decade. However, there is also a growing demographic imbalance between working age and retired people which could undermine the local economy and the delivery of public services. Therefore, in addition to meeting current household growth projections, the preferred annual requirement of 270 seeks to support economic growth projections and aspirations and the development of more sustainable communities by improving the overall housing offer to encourage population retention and in-migration. Careful consideration has been given in identifying the housing requirement, drawing on a range of evidence sources. Further analysis of economic and employment issues has been set out in the Housing Supply Requirements and Site Allocations Background Evidence Paper which accompanied the Draft Local Plan. Because the housing requirement is based on meeting an identified need for additional housing over a long period, this should not adversely affect the normal operation of the wider residential market.

Comment summary:

The suggested figures of housing needs over the next fifteen years is too high. Over the last thirty years we have seen a decline in the population of this borough, yet you seem to suggest the need for five thousand more houses over the next fifteen years. An ageing population and less people per household are not adequate reasons to predict an expansion of this scale. The Draft Local Plan wants to promote 'households with executive aspirations'. People in this area predominantly work in Middlesbrough and other large nearby towns and any market for these houses would be taken by people commuting in and out of the area, which would be detrimental to the green issues raised in this plan.

Officer response:

The assessed housing requirement is based primarily on meeting the current and future needs of the existing population, drawing on the most recent government household growth projections from 2011-21. The latest official population projections (also 2011 base) indicate that the population may stabilise over the decade. However, there is also a growing demographic imbalance between working age and retired people which could undermine economic development and the delivery of public services. Therefore, the preferred annual requirement of 270 dwellings per annum seeks to support economic growth projections and aspirations and the development of more sustainable and balanced communities by improving the overall housing offer to encourage population retention and in-migration. The majority of working residents (about 60%) are employed in the borough, which is approximately double those working elsewhere in the Tees Valley. The borough has a noticeably older population than other Tees Valley authorities and from economic and environmental sustainability perspectives it is important that emerging employment opportunities can be taken by local residents and do not promote higher levels of in-commuting.

Housing Requirements and Delivery Phasing

Comment summary:

The Council's strategy regarding an increase in housing within the Borough is flawed. The idea that to build more houses encourages people to live and work in the Borough is an 'old chestnut' that has, over the years, been trotted out with no evidence to show that it has actually worked. Manufacturing industries have declined with the loss of many jobs. Unemployment in the area is currently 11.9% much higher than the national average of 7.8%. Economical activity in the Borough is 73.7% compared with the national average of 74.1%. These two factors alone have contributed to a population decline between 2001 and 2011 and this decline is forecast to continue. Surely, economic activity must significantly increase before anyone (regardless of their employment) would even consider living here.

Officer response:

The housing requirement is needed primarily to meet the demand for additional housing within the existing populace due to the ongoing increase in the number of households. However the Local Plan provides the statutory long-term development strategy for the borough and recognises that economic growth and housing demand are inextricably connected and occur simultaneously. The plan therefore includes policies to support the linked economic growth strategies led by the Borough Council and Tees Valley Unlimited, which seek to create a more diverse, prosperous and resilient local economy over the next 10 to 15 years, generating higher employment levels through investment in identified growth sectors. Furthermore, recent employment projections, as set out in the supporting Employment Land Review, indicates that employment levels may recover to pre-recession levels over the plan period (an increase of about 5,000-6,000 jobs). At the same time, the working age population is projected to decline, which could therefore increase employment opportunities. Recent population projections (interim figures for 2011 to 2021) indicate that the population may stabilise towards the end of that period.

Comment summary:

The Draft Policy fails to recognise that the Borough is sandwiched between the sea to the north and the Cleveland Hills and North Yorkshire Moors to the south. Topographically, it is therefore impossible to create any good north-south transport corridors and a significant westward journey is required to access these. It is noted in the plan that there has been a westward migration of population in recent years, for the above reason the population projections used are severely optimistic and what is required is to manage the population decline properly. Building new houses on greenfield sites is counter productive to the attractiveness of the area and should be struck out from the whole of the draft document.

Officer response:

The assessed housing requirement is based primarily on meeting the current and future needs of the existing population, drawing on the most recent government household growth projections. The latest official population projections (also 2011-2021 interim figures) indicate that population decline may level out over the decade, depending on migration levels. However, there is also a growing demographic imbalance between working age and retired population which could undermine the local economy and the delivery of public services. Therefore, in addition to meeting current household growth projections, the preferred annual requirement of 270 dwellings seeks to support economic growth projections and aspirations and the development of more sustainable communities by improving the overall housing offer to encourage population retention and in-migration. The policy seeks to allocate sufficient housing land within the borough which can meet the assessed requirement while having regard to the conservation of the borough's unique natural assets. In selecting sites for development, priority has been given to developable brownfield and vacant urban land, with the most suitable greenfield sites making up the residual land requirement to ensure housing needs can be met over the plan period. The selection of greenfield sites seeks to minimise the impact on the natural environment and direct development to the most sustainable locations. Physical and environmental constraints have been alluded to in the Housing Supply Requirements and Site Allocations background document supporting the plan and have informed the site selection process.

Housing Requirements and Delivery Phasing

Comment summary:

The Policy does not present the necessary certainty required of a Plan intended to direct the development of the Borough for the foreseeable future. It is unclear from the wording that there is any confidence in the numbers adopted as the basis for allocating housing land. It is unacceptable to refer to minimum numbers, then to an enhanced allowance and then to conclude that if the need arises there will be further allocations made. It is not clear what is the basis for the proposed approach. In themselves, the numbers do not seem to reflect the level of need that will be experienced within the lifetime of the Plan. In view of conclusions made by the Secretary of State in his recent decision on the appeal relating to proposed housing development adjacent to the Galley Hill Estate in Guisborough, it would appear that the local planning authority is underestimating the amount of housing that will be needed, notwithstanding its reference to current population projections. In addition, no allowance seems to have been made, on the one hand, for catching up, within the first five years of the Plan's life, with the existing shortfall resulting from a failure to deliver sufficient housing over an extended period, and, on the other, for boosting supply by factoring-in an additional 20% more land in the early part of the Plan. The Policy should reflect the genuine need for additional housing land, provide a clear indication of what that means in terms of land supply and then set out in the expansion of the Policy that follows, which sites will be supported to deliver the anticipated numbers.

Officer response:

In accordance with national policy, the latest official household growth projections (200 per annum) have assumed the starting point for assessing need and they form the basis of the requirement. It is also recognised however that as the household growth figures only reflect historic need and demand, they may be inadequate in estimating future requirements, particularly when wider demographic and economic projections and policy objectives are considered. Therefore, a higher annual requirement of 270 has been specified to promote the development of more sustainable communities through population retention and rebalancing by increasing the working-age population. This higher requirement will prospectively result in a significant increase in (net) housing supply, thereby conforming with the NPPF. The 10% buffer has been included to allow for any net stock losses or delays in bringing sites forward for development. As high levels of stock losses associated with housing renewal schemes were the main reason for under-performance during the LDF period, it is important that the plan has regard to this issue to support the achievement of the delivery target. Although clearances are difficult to predict, particularly over the long-term, the figure of 10% was deemed appropriate following consideration of anticipated reductions in clearance levels, the potential for net losses to be offset elsewhere by small windfall developments, the range, location and delivery profile of the preferred sites and current commitments, and the relatively high net requirement already proposed in the plan. The level of supply included in the first delivery phase to 2018/19 is sufficient to meet the minimum requirement plus a 20% buffer. In addition to this is the potential for around 1,000 dwellings after year 15. The plan therefore allows for the flexible delivery of housing supply. With regard to the delivery backlog, because the undersupply is broadly commensurate with levels of population loss as recorded by the 2011 Census, any evidence of pent-up demand may be limited and as such it may be difficult to justify its inclusion within the requirement.

Comment summary:

NWL support the overall aim of this policy to promote a flexible and continuous supply of housing land over the plan period. The description of the annual housing targets as a minimum net requirement is in line with NPPF paragraph 14 and is welcomed. Paragraph 6.12 of the draft Plan acknowledges the previous housing under supply and seeks to increase the housing requirement figure by 10%. This position is supported in principle by NWL, however, identifying additional sources of supply such as Hewley Reservoir would provide greater certainty in terms of meeting the full, objectively assessed needs for market and affordable housing. Furthermore, NWL question whether the overall housing requirement is sufficiently aspirational especially given that the proposed.

Officer response:

Support for the overall aims of the policy is noted. The assessed housing requirement strikes a balance between aspiration and achievability. In accordance with national policy guidance, the official household growth projections, which are relatively low, have assumed the starting point for determining the objective assessment of need. As the proposed level of development exceeds household projections and will significantly increase net supply, it is maintained that the requirement is aspirational and realistic and will support wider social and economic objectives. The response to comments about the Hewley Reservoir site is set out under Policy H3.

Comment summary:

Bellway supports the overall aim of this policy to promote a flexible and continuous supply of housing land over the plan period. In particular, Bellway welcomes the acknowledgement in Policy H1 that the annual housing target is a minimum net requirement and the allowance for over delivery of 10%. Bellway however questions the overall housing requirement figure and does not consider that this is sufficiently aspirational, particularly given the NPPF requirement at paragraph 47 for local planning authorities to "significantly boost the supply of housing" and that the proposed housing targets are some way below the previously supported Regional Strategy housing requirements. In addition, the significant under delivery of housing since 2004 has also not been taken into account and it is recommended in line with the NPPG and recent appeal decisions that this is addressed in the first five years of the plan.

Officer response:

Support for the aims of the policy and on plan flexibility is noted. The preferred minimum housing requirement strikes a balance between aspiration and achievability. The requirement has enabled the identification of a wide range of sites to extend housing choice and, if delivered as proposed over the plan period, will significantly increase net housing supply to support economic growth projections aspirations and the development of more sustainable communities, in addition to meeting the needs of the existing population. At the same time, the proposed level of development broadly corresponds to gross completion levels over recent decades. In accordance with national policy household growth projections (which are relatively low), have assumed the starting point for assessing the requirement. The preferred requirement, boosted by the 10% over-allocation will increase supply 50% above the most recent household growth projections and is therefore seen to be sufficiently aspirational. With regard to the supply backlog, because the undersupply is broadly commensurate with levels of population loss as recorded by the 2011 Census, any evidence of pent-up demand may be limited and as such it may be difficult to justify its inclusion in the requirement.

Comment summary:

The proposed housing requirement is greater than both the 2011 interim household projections and more complete 2008 based household projections. The HBF supports the Council in aiming to deliver greater housing numbers than the projections. The HBF also supports the policy stance in Policy H1 that the proposed housing requirement is a minimum requirement and the allowance for over delivery by approximately 10%. The overall housing requirement figure is not, however, considered sufficiently aspirational and it is not considered that it will provide the 'significant boost' to housing supply required by the NPPF. The proposed housing requirement of 270 net new dwellings per annum is less than previous targets for the authority set by the now revoked Regional Strategy (RS) which required on average 340 net new dwellings for Redcar and Cleveland between 2004 and 2021. This proposed overall reduction of 70 dwellings per annum amounts to 1,050 dwellings over the 15 years of the plan. This reduction is not considered to be in conformity with NPPF requirements to 'boost significantly' the supply of housing. It is, however, recognised that the RS was developed with an aspiration for high levels of growth within the North East which has not been met within Redcar and Cleveland. Previous net delivery rates for new housing fell significantly short of the RS requirements. This was, however, set against a period of significant demolition with gross new dwellings being significantly greater than the net figure. Indeed in between 2003 and 2013 it is noted that an average of 328 gross new completions were delivered on average and for three consecutive years between 2006 and 2009 the gross completions were in excess of 400 units per annum significantly greater than the RS requirement (340). These highly encouraging gross figures provide an indication that house building can achieve significant volumes within Redcar and Cleveland. This is especially likely if the predicted levels of demolitions begin to decrease as anticipated in the Council's September 2013 'Housing Supply Requirements & Site Allocations' background paper. It is therefore likely that in periods of lower demolition a target similar to the RS can be achieved. The revocation of the RS means that the Council must identify its own objectively assessed housing need. Paragraph 159 of the NPPF indicates that a Strategic Housing Market Assessment (SHMA) should be prepared to inform such an assessment. The 2012 Tees Valley SHMA does provide a degree of credence to the Council's proposed housing requirement, identifying a need in table C7 (page 171) of 267 net new dwellings per annum for Redcar and Cleveland between 2008 and 2026. It is noted that the SHMA period is different to the plan period and therefore direct comparisons are difficult. The SHMA is, however, a good starting point for identifying the housing needs of the district but it does not take account of the economic aspirations of the Council and its partners or the ambitions to reduce the amount of population loss from the area. The Council identifies within its Regeneration Masterplan that it has an aspirational target to achieve 14,000 new jobs in the area over the next 15 years. Whilst it is noted that unemployment has risen in the area and some of these jobs could potentially be filled by those currently out of work a significant proportion of any such jobs growth would need to be taken by people moving back into the area. This is due to the aging nature of the current population in Redcar and Cleveland, with the proportion of the over 65 population anticipated to increase by 9% over the next 20 years (ONS 2010 projections). To attract new residents of working age to the area will require new housing to be provided at a greater rate than is proposed in the draft plan. The 'Housing Supply Requirements & Site Allocations' background paper does in Table 2.10 consider the implications of a number of jobs growth scenarios and identifies a housing requirement ranging from 240 per annum to 340 per annum. The higher requirement of 340 per annum relates to the Redcar and Cleveland Regeneration Masterplan ambition to create 14,000 new jobs. Whilst it is acknowledged that such a requirement is aspirational such a figure is realistic given previous gross delivery rates. It is therefore considered that this higher figure more closely aligns with both the Council's own economic ambitions as well as NPPF paragraph 154 which states 'Local Plans should be aspirational but realistic'. The 'Housing Supply Requirements & Site Allocations' background paper and 2012 AMR both indicate a significant backlog of completions against the current housing requirement contained within the 2007 Core Strategy. This amounts to a net backlog of 1,312 dwellings since 2004. The policy does not attempt to 'make good' this backlog. The draft NPPG is clear that household

Officer response:

The support from the HBF for a housing requirement which exceeds household growth projections and allows for flexibility is acknowledged. It is maintained that the proposed requirement is sufficiently aspirational as it will result in a significant increase in net supply and, with the 10% buffer, proposes a level of development potentially up to 50% in excess of the interim household projections. The assessed requirement therefore allows for population in-migration to support economic growth projections and objectives and the development of more balanced and sustainable communities. The RS figures lack credibility as they are outdated and were predicated on achieving a level of regional economic growth which has not materialised. Gross completions over the LDF period have been unusually high, boosted by unprecedented credit availability which fuelled the housing boom preceding the 2008 economic downturn. In the three years from 2006/07 to 2008/09 gross completions averaged over 490 units per annum, which has distorted the overall figures. Over the other six years of the 2004 to 2013 period the gross average was 277 units. During the recessionary period, completions have been heavily underpinned by high levels of grant funding including a large proportion of replacement housing. In line with austerity cuts, similar levels of funding may not be made available for some years. With regard to the net delivery backlog, because the undersupply is broadly commensurate with levels of population loss as recorded by the 2011 Census, any evidence of pent-up demand may be limited and as such it may be difficult to justify its inclusion in the requirement. As noted in the Housing Background Evidence Paper supporting the draft Plan, the aspirational target of 14,000 jobs in the Redcar & Cleveland Regeneration Masterplan is a gross figure. As such, it should not be treated as a reliable indicator of potential labour market expansion within the borough over the plan period.

Housing Requirements and Delivery Phasing

projections should provide the starting point in the assessment of overall housing need. However, it also goes on to explicitly state that these projections do not deal with the accumulated unmet housing need. It is therefore recommended that the Council seek to address this backlog. In line with recent appeal decisions and the draft guidance within the NPPG it is recommended that this be addressed in the first five years of the plan. Using the 'What homes Where' toolkit this would create the following requirement; What Homes Where 2014 to 2030 - 3,226 Previous under-supply - 1,312 Total - 4,538 The draft plan requirement of 4,050 is therefore considered to be 488 dwellings short of the actual requirement, based solely upon projections, once the under-supply has been taken into account. In addition it is also recommended that the Council consider introducing flexibility to ensure that any under-delivery or none delivery from sites does not jeopardise the overall requirement. Whilst it is noted that the plan currently includes provision for a 10% buffer given the current issues of under-supply it is recommended that this may need to be increased. The HBF considers a buffer closer to 20% may be more appropriate. However, as noted above, the Council's overall plan requirement also needs to take account of its own economic aspirations and the SHMA. A higher requirement of 340 dwellings per annum would enable the Council to achieve its economic ambitions as well as provide a greater quantity of affordable housing. It is therefore suggested that the Council consider increasing its requirement prior to the next phase of consultation upon the plan and address the issue of backlog against current plan requirements.

Comment summary:

Support recognition of need to provide additional housing and the benefits this will bring. Housing brings distinct economic benefits and perhaps a distinct paragraph could be included to summarise these benefits to strengthen the justification for the policy. The Council is basing growth assumptions on an interpretation of ONS (should be DCLG) projections without taking full account of the Tees Valley 2012 Strategic Housing Market Assessment (SHMA). The NPPF is explicit in saying LPAs must utilise a SHMA as the evidence base. This could lead to potential problems at inquiry stage. The SHMA identifies 4,000 units at 267 pa. Add the NPPF buffer of 5% and the minimum requirement is 4,200. H1 identifies up to 4,500 gross -mixing net and gross in the same table- minimum supply is quoted as net, with maximum supply as gross which is a bit confusing. Could policy H1 not just state that the total net housing allocation is 4,500 including the NPPF buffer of 5%?

Officer response:

The support from the LEP for increasing housing supply is welcomed. The economic benefits of housing have been briefly alluded to in the Housing Background Evidence Paper but it is agreed that the plan could be strengthened by adding more substantive comment to the document itself. Reference is made in the Plan to the SHMA as a key part of the evidence base, particularly in relation to affordable housing needs and the need for different house types within geographical market areas. However, explicit analysis of overall housing requirements in the SHMA is of insufficient depth and limited benefit as it provides a simple breakdown of the 2008-2033 household formation projections between the four local authorities on a pro-rata basis and covers a different time period, from 2011-26. Moreover, it is stressed in the SHMA that the figures are only projections and do not constitute an assessed requirement. The Plan provides a more robust needs assessment using more detailed analysis and the latest household projections as a baseline. The 10% buffer does not refer to historic under-delivery but has been included to allow for any net stock losses or delays in bringing sites forward for development and, as per the NPPF, provides a degree of flexibility in delivering the requirement. The figure of 10% was deemed appropriate following consideration of anticipated reductions in clearance levels, the potential for net losses to be offset elsewhere by small windfall developments, the range, location and delivery profile of the preferred sites and current commitments and the relatively high net requirement proposed in the plan. The document will be amended as necessary to avoid confusion between the net minimum requirement (270) and the gross target (300) by limiting references to the latter. With regard to the supply backlog, because the undersupply is broadly commensurate with levels of population loss as recorded by the 2011 Census, any evidence of pent-up demand may be limited and as such it may be difficult to justify its inclusion within the requirement. The level of supply included in the first delivery phase is sufficient to meet the minimum requirement plus a 20% buffer, as per the NPPF .

Comment summary:

Housing requirements are directly related to employment. Extension of employment availability will generate an increased housing requirement. There appears to be no extra demand included the Housing Requirement for replacement of houses demolished because of unfitness. There are many terraces of small houses over 100 years old that may reach the end of their useful life within the next 15 years.

Officer response:

By proposing a level of development in excess of household growth projections, the plan supports an increase in housing demand arising from higher employment levels. By over-allocating 10% above the minimum requirement, the plan also allows for any under-delivery in supply, including through net stock losses due to demolition. The figure of 10% includes consideration of anticipated reductions in clearance levels and the potential for net losses to be offset elsewhere by small windfall developments. The plan takes into account current housing renewal programmes but clearance levels are typically difficult to predict over the longer-term and in this respect addressing poor quality housing may sometimes result in renovation rather than clearance and / or redevelopment solutions.

Comment summary:

Supports the overall aim to promote a flexible and continuous supply of housing land over the plan period. Welcomes that the policy is a net minimum requirement with a 10% buffer. Does not consider that the housing target is aspirational enough. The significant under delivery since 2004 has not been addressed and should be met in the first 5 years.

Officer response:

Support for the aims and flexibility of the policy is noted. The preferred minimum housing requirement strikes a balance between aspiration and achievability. The requirement has enabled the identification of a wide range of sites to extend housing choice and, if delivered as proposed over the plan period, will significantly increase net housing supply to support economic growth projections and aspirations and the development of more sustainable communities in addition to meeting the needs of the existing population. At the same time, the proposed level of development broadly corresponds to gross completion levels over recent decades. In accordance with national policy, household growth projections (which are relatively low) have assumed the starting point for assessing the requirement. The preferred requirement, boosted by the 10% over-allocation will increase supply 50% above the most recent household growth projections and is therefore seen to be sufficiently aspirational. With regard to the net delivery backlog, because the undersupply is broadly commensurate with levels of population loss as recorded by the 2011 Census, any evidence of pent-up demand may be limited and as such it may be difficult to justify its inclusion in the requirement.

Comment summary:

NWL support the overall aim of this policy to promote a flexible and continuous supply of housing land over the plan period. The description of the annual housing targets as a minimum net is welcomed. Paragraph 6.12 of the draft Plan acknowledges the previous housing under supply and seeks to increase the housing requirement figure by 10%. This position is supported in principle by NWL, however, identifying additional sources of supply such as land north Middlesbrough Road would provide greater certainty in terms of meeting the full, objectively assessed needs for market and affordable housing. Furthermore, NWL question whether the overall housing requirement is sufficiently aspirational.

Officer response:

Support for the overall aims of the policy is noted. The assessed housing requirement strikes a balance between aspiration and achievability. In accordance with national policy the official household growth projections, which are relatively low, have assumed the starting point for determining the objective assessment of need. As the proposed level of development exceeds household projections and will significantly increase net supply, it is maintained that the requirement is aspirational and realistic and will support wider social and economic objectives. The response to comments about the Middlesbrough Road site are set out under Policy H3.

Comment summary:

page113 The development at Saltburn Infant School is complete. There cannot be 12 houses to be built in 2014/15 - 2018/19 The development at castle View at Skelton is well under way. There are unlikely to be 50 houses remaining to be built, if any post 2014. page115 there is scope to build additional houses at Saltburn Junior School in addition to the 12 listed. page172 6.212 is agreed in respect of affordable housing. page 180 Policy H4 The percentage of affordable housing has been publicly stated to seek a 20% allocation of any new development over 10 houses. This debate needs to be confirmed. The design of households deemed to be affordable should not radically vary from that of other households on a site, but neither should this be an argument for not allowing different designs to be incorporated. Single bedroom properties should be available on 2/3 bedroom sites. page 181 6.234 Further reason for conducting more area specific needs for affordable housing!

Officer response:

The relevant tables will be amended following confirmation of the 2013/14 housing completion figures. The number of dwellings estimated at Saltburn Junior School reflects the limited size of the site and development constraints. Policy H4 sets out the Council's proposed policy for affordable housing, which seeks provision of 15% affordable housing on sites of 15 dwellings or more. Further guidance on the Council's approach for affordable housing is set out within the adopted Affordable Housing SPD.

Housing Requirements and Delivery Phasing

Organisation: Persimmon Homes
Teesside

Agent Name:

Agent Organisation:

Submission type: E-Mail

Agree with section?: In Part

Comment summary:

Whilst Persimmon Homes are satisfied that the proposed housing requirement is higher than the 2011 interim household projections (200 Per annum), based on the past delivery rates and the NPPF requirement for a 20% buffer due to previous under delivery, it is not considered that the target of 270 dwellings per annum is sufficiently aspirational, particularly given the social and economic objectives of the plan and the requirement of the NPPF to "significantly boost" the supply of housing. Clarification on why the requirement incorporates a 10% buffer would be appreciated and confirmation of whether this is in addition to or instead of the 20% buffer required in the NPPF where persistent under-delivery has ensued. The requirement should be increased to 5445 (365 dwellings per annum) in order to accommodate the historic backlog (1,395) and a 20% buffer to reflect persistent under-delivery and ensure that social and economic aspirations to reverse population decline, encourage in-migration of working households and ensure that economic growth and regeneration aspirations are capable of being met. Analysis of the previous housing delivery rates (averaging 328 gross between 2003 and 2013, including over 400 from 2006/7 to 2008/9) indicate that such a level of development is achievable.

Officer response:

The preferred (minimum) housing requirement strikes a balance between aspiration and achievability. The requirement will significantly increase net housing supply in accordance with national policy and has enabled the identification of a wide range of sites to extend housing choice to support economic growth projections and aspirations and the development of more sustainable communities, in addition to meeting the housing needs of the existing population. In line with national policy, household growth projections (which are relatively low) have assumed the starting point for assessing the requirement. The 10% buffer has been included to allow for any net stock losses or delays in bringing sites forward for development and, as per the NPPF, provides a degree of flexibility in delivering the requirement. The figure of 10% was deemed appropriate following consideration of anticipated reductions in clearance levels, the potential for net losses to be offset elsewhere by small windfall developments, the range, location and delivery profile of the preferred sites and current commitments and the relatively high net requirement proposed in the plan. The level of supply included in the first delivery phase to 2018/19 is sufficient to meet the minimum requirement plus a 20% buffer. The suggestion to increase net supply to 365 dwellings per annum is not supported as it is likely to be highly challenging over the plan period and may be difficult to justify bearing in mind the most recent annual household growth projections and because the figure exceeds the annual RS target (340) which itself was predicated on a higher level of economic growth which has not materialised. The preferred requirement does not include the historic backlog on the basis that as the undersupply broadly corresponds to population losses over the Census period any evidence of pent-up demand is likely to be limited and as such increasing the figures may be difficult to justify. The preferred requirement, boosted by the 10% over-allocation, will increase supply 50% above the most recent household growth projections and by implication will support population rebalance and wider economic growth objectives. Gross completions over the LDF period have been unusually high, boosted by unprecedented credit availability which fuelled the housing boom preceding the 2008 economic downturn. In the three years from 2006/07 to 2008/09, gross completions averaged over 490 units per annum, which has distorted the overall figures. Over the other six years of the 2004 to 2013 period the average was 277 units. During the recession, completions have been heavily underpinned by high levels of grant funding, including a large proportion of replacement housing. In line with austerity cuts, similar levels of funding may not become available for some years.

6.22 The link between property sizes and Council Tax banding, allied to the objective of promoting a more sustainable population balance by retaining and attracting working age households, indicates that increasing the supply of detached family dwellings, including 'executive' or 'executive-style' homes, should be given priority in the plan. The SHMA, moreover, has identified an undersupply of larger detached dwellings in some areas of the borough.' What IS the point of 'attracting working age households' if there are NO jobs? The priority SHOULD be for smaller housing (see your own household size claims), social housing and affordable first time buyer housing. Instead it appears you are trying to 'grab' revenue from yet to be realised higher council tax bands.

Officer response:

Research has shown that one of the drivers for population loss in the borough has been the lack of a suitable housing offer. The Draft Local Plan identifies 34 preferred housing sites, of which 31 would be expected to provide a range of housing types and make a contribution to meeting affordable housing needs in the local area. Only 3 sites are proposed to be allocated exclusively for executive-style housing, and each of these sites would be expected to make an off-site financial contribution in order to deliver affordable housing in the local area.

DLP187**Full Name:** Mr John Dear**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

Section 1.89 establishes the principle of a need for affordable housing. Yet the plan prioritises the building of executive style housing. This is a contradiction within the policy. Many younger people are struggling to get on the housing ladder and certainly in Guisborough the housing plan seems to favour the building of larger 3 and 4 bedroom 'aspirational' homes. Builders seem to prefer building estates of larger detached houses. To believe that such houses are affordable without the various plans to purchase with subsidised mortgages seems unwise. I suspect that there is a greater proportion of larger family homes on the market for sale than any other house type. These are mostly estate houses, similar to those proposed in the plans. The current mix of housing is unbalanced, and future housing plans seem to further exaggerate the imbalance.

Officer response:

DLP284**Full Name:** Miss Marguerite Benson**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** In Part**Comment summary:**

Comment on Policy H2 The comments already posted suggest that there are real concerns about the proposed building development in Marske, where flooding may be an issue. The recent flooding in Redcar and the East Cleveland area demonstrates that flooding is a risk which could be addressed in any future planning policy. Therefore I suggest a proposed amendment: from d) achieve an appropriate density which promotes the sustainable use of land for development; and to d) achieve an appropriate density which promotes the sustainable use of land for development and takes cognizance of potential flood risks.

Officer response:

Flood risk will be dealt with in a new policy on flood risk management. The new policy will require applicants to ensure that flood risk is not increased either on-site or off-site. On greenfield sites the run-off rates will need to be maintained and on brownfield sites the policy will include a requirement to reduce surface water run-off, which will reduce the risk of flooding where new development takes place. The maximum density of the development will be determined through a flood risk assessment and drainage assessment, which will need to be undertaken by the applicant and submitted along with the planning application.

Comment summary:

Welcome recognition that a healthy local economy requires an appropriate mix of housing, in particular the role executive housing plays in retaining and attracting high earners into the Tees Valley. Would like to see definition of executive housing expanded to include a reference to end, penthouse apartments, particularly those arising from conversions of larger older buildings. Borough has an ageing population (highest proportion of over 65s in Tees Valley). Plan should make reference to how Redcar and Cleveland will cater for this increase.

Officer response:

The 'definition' of executive housing is not intended to be exhaustive and merely serves to give an indication of the types of housing that might be included. Individual applications for executive developments, including apartments, would be considered on their merits. The needs of the ageing population are included within the Policy's requirements to meet specialist housing needs and provide an appropriate mix of housing types.

Comment summary:

Policy H 2 states, proposals for housing development will be expected to: a) contribute to meeting social housing requirements, market housing demand and specialist housing needs as indicated in the Strategic Housing Market Assessment or by other evidence; b) provide an appropriate mix of house types and sizes which enhances local housing options and is acceptable for the site and its location; c) where appropriate, increase the supply of detached dwellings in the borough, including 'executive' or 'executive-style' housing; d) achieve an appropriate density which promotes the sustainable use of land for development; and e) have full regard to the Design of Residential Areas SPD. Our client broadly agrees with Policy H 2 but would suggest that the criteria be kept flexible enough to allow the future market to determine the type and mix of housing at the appropriate time.

Officer response:

Support noted. It is not believed that the Policy, in seeking to secure an appropriate mix of dwelling types and tenures, unreasonably restricts the ability of developers to react to market conditions.

Support the protection of Guisborough Rugby Club as an open space area. Oppose proposed development by landowner. The Council has identified sufficient housing sites to meet its objectively assessed housing needs. The inclusion of the area as open space meets the policy aims set out in PPG17 and the NPPF. The development of this open space would result in the loss of recreational asset and would have a detrimental impact upon the landscape and wildlife habitat. Development of this site would put extra traffic and congestion on local roads which are already busy. Concerns over loss of rugby club with no alternative site provided. Concerns over impact retail development here would have upon Guisborough district centre.

Officer response:

Support noted.

Housing allocations have been identified in order to meet the specified minimum requirement in the 15-year period covering 2014/15 to 2028/29. Table 6 (Housing Allocations) identifies our client's site as follows: Policy Site Location Indicative Delivery Phasing 14/15-18/19: 50 19/20-23/24: 275 24/25-28/29: 375 Post 2028/29:300 Our client agrees that housing site allocations are required in order to meet the housing supply requirements of the borough and supports the inclusion of the Marske Inn Farm site. The site is situated in a sustainable location with good access to public transport and in close proximity to key services such as schools, shops, major employment locations and community facilities. There are few policy constraints and the site is not designated as an environmentally sensitive location. Development of the site will help the Council to meet local housing needs and improve the range of higher end and other aspirational market housing in Redcar and Cleveland. The site is available to come forward for development within the plan period. An outline planning application has been submitted to, and is currently being considered by, the Council. The application seeks to bring forward 1,000 dwellings, which is in line with Policy H 3 and the wider strategic vision for Redcar and Cleveland.

Officer response:

Support noted.

NWL object to the omission of Hewley Reservoir as an allocation for residential development in draft Policy H3. Hewley Reservoir is a suitable location for development, located in an existing built up area and within walking distance of a wide range of community services and facilities. Whilst an acceptable form of access would require the acquisition of one or more dwellings surrounding the site, this could take place in the short term and therefore does not mean that the site is undeliverable in the medium to long term. Likewise, the development costs associated with in-filling of the reservoir are unlikely to render development unviable. Paragraph 47 of the NPPF requires LPAs to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area and identifies a supply of specific deliverable and developable sites sufficient to provide up to 15 years worth of housing against their housing requirements. The allocation of Hewley Reservoir would make a valuable contribution towards meeting the requirements of Paragraph 47.

Officer response:

The plan seeks to identify a range of suitable sites in sustainable locations which can deliver and maintain a significant upturn in housing completions to meet assessed requirements over the plan period. Although this is a brownfield site in a highly sustainable location, it is not currently in a developable state and, having been made available for redevelopment for some years, included in the SHLAA, and as an allocation in the Draft LDF Communities DPD, the situation has evidently not progressed in resolving delivery constraints, which casts doubt over when the site might come forward for development. At the same time, because the site is without policy constraint, non-allocation does not prevent the site being redeveloped for housing independent of the plan.

DLP243**Full Name:** Peter Finlinson**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Objects to the draft plan due to: emphasis on building on Greenfield sites, which will fundamentally alter the character of the area and cause damage to the health and well being of residents; inadequate highways infrastructure to cope with the level of development proposed and the additional traffic generated; flooding problems and flood management capacity; and there is no demand for extra housing in the Borough, as the present indications are that area has a declining population. The plan does not reflect the interests of the Borough and should be scrapped. This council has a record of not listening to the wishes of residents. The implications of this plan are so serious and will cause so much damage to the environment that it cannot be allowed to go forward without a clear indication by a majority of the Borough Residents that they agree with the proposals.

Officer response:

The local plan gives priority to the development of suitable and viable brownfield sites and other available land within existing residential areas. However, it has been necessary to also select some greenfield sites in order to meet assessed housing requirements in terms of the quantity and type of development needed. Demand for more housing is being driven primarily by growth in the number of households as more people live alone, and for longer. The plan requires all development proposals to satisfactorily meet all assessed infrastructure requirements, including highways and drainage capacity improvements, both on and off-site, and mitigating any impacts on the natural environment. These obligations are included in the conditional criteria attached to the site development policies. The plan seeks to avoid development on sites in areas at high risk of flooding, and some development options have been rejected on that basis. The Local Plan provides a broad strategy to promote the sustainable development of the borough through balancing economic growth objectives with the conservation of the borough's environmental assets, by directing development needs to the most appropriate locations. As a statutory public document, the plan is subject to extensive formal consultation with local communities and other key stakeholders and to independent scrutiny through the Planning Inspectorate.

DLP1255**Full Name:** England & Lyle

Would like to see land at High Farm, Teesville at the southern end of the green wedge included as a housing allocation for 100-150 executive style houses. The site is suitable, available and achievable and would help to meet the Council's objectively assessed housing needs (which are higher than is being planned for). The site is one of the few sites in the conurbation that would be suitable for executive style housing.

Officer response:

The site was not considered as a potential allocation in the draft plan as it is currently the subject of an extant planning consent to provide community woodland as part of the current High Farm development. Sufficient land has been identified to meet the assessed requirement, but notwithstanding that, this proposal is not supported for the following reasons: development would result in an inappropriate extension to the built-up area and a significant and unacceptable reduction in the green wedge; the site is not in an established executive housing location and is unlikely to be required for such purposes as other, more suitable sites have already been identified which will contribute significantly to increasing the supply of detached and 'executive properties' in the borough; and, if implemented, the proposals are likely to promote further development in the green wedge, as proposed in a different representation, with the risk that the potential scale of development could undermine the regeneration and development of key sites in the north of Greater Eston.

Comment summary:

Heritage avoidance is not always the best way of achieving constructive heritage conservation. The Plan should be based on a proper understanding of the historic environment and an assessment of the extent to which heritage assets could be harmed or lost by proposals in the Plan. Whilst the Background Evidence Paper: Housing Supply Requirements & Site Allocations - (September 2013) used a site-selection methodology which factors-in the presence of listed buildings, archaeology, and conservation areas, analysis therein makes no overt reference to the 'significance' of those assets and no clear assessment of the potential harm or loss in relation to any perceived public benefit. As a consequence English Heritage is not yet satisfied that a number of proposed allocations will not give rise to substantial harm to or loss of significance of associated heritage assets on or adjacent to those allocations that cannot be outweighed. Without being able to demonstrate this, allocations risk failing to satisfy policies in the NPPF for the conservation and enhancement of the historic environment. English Heritage is not yet satisfied, therefore, and the Council has demonstrated, that it has identified clearly the significance of any heritage assets that may be affected by a proposed allocation, or carried out an assessment of the impact of development upon that significance. There appears to be little commentary regarding the extent to which any harm to that significance is outweighed by public benefit, taking account of the available evidence and any necessary expertise in accordance with the requirements of the NPPF.

Officer response:

The Council will further consider, where appropriate the impact of proposed housing allocations on heritage assets an policies reviewed as necessary. No site allocations will be supported where the potential impacts of development upon heritage assets could not be addressed through good design and/or appropriate mitigation. Where site allocations have been made in close proximity to designated heritage assets, this has been indicated within the policy. The impact of any development upon heritage assets will also be carefully assessed at the planning application stage taking into account Policies HE1-4.

Comment summary:

Planning consent for residential development in various sites within Guisborough has now reached in excess of 500. I believe that no further developments for house building should be granted until the effect of these 500 houses has been assessed. The area no longer imports jobs. Too much development in Guisborough will have a negative effect - spoiling the market town image it tries to project. Parking is a problem, schools are overcrowded, GP waiting times are long. The High Street does not provide a pleasant shopping experience with its multitude of charity shops and takeaway food outlets. Current housing developments are shifting the centre of gravity of the town away from its centre. Hence more traffic into the town centre. Future housing developments should concentrate on building small affordable houses within walking distance of the town centre. Consideration should be given to the building of bungalows for the ageing population.

Officer response:

The majority of sites included in the Draft Plan at Guisborough already have a planning permission in place. Sites are located within the town as well as on the western outskirts and will collectively provide a broad mix of housing to meet local needs and aspirations over the plan period. Other policies in the plan promote improvements to the town centre, its infrastructure and its economy. Housing developments along with other investments will help support these aims. The plan is supported by an infrastructure strategy which identifies any anticipated additional infrastructure requirements. In addition to this, the impact of individual major new development proposals on community infrastructure is considered at application stage with any appropriate developer contributions agreed as legal conditions attached to the planning consent.

I would suggest that the Council addresses the issues of existing sewerage capacities and the flooding of areas before allowing any further developments to proceed. New build developments on greenfield sites in Redcar have just increased the pressure on the already overwhelmed sewerage and drainage systems.

Officer response:

In assessing potential site allocations, we have taken into account flood risk and each site's ability to achieve development within the context of avoiding areas of flooding, or ensuring satisfactory mitigation measures can be implemented. Following a request from a number of consultees, a new standalone policy on flood risk will now be included in the Local Plan. All planning applications on land that has been identified to be at risk of flooding will be required to follow the approach set out in the NPPF and the new policy and some developments will need to be accompanied by a Flood Risk Assessment. The Council is working with Northumbrian Water and the Environment Agency to identify long term solutions for surface water management in Redcar, which has included the publication of the Redcar Surface Water Management Plan. Developers for each of the sites allocated in the Local Plan will need to submit a drainage plan to the SuDS Approving Body for approval prior to development commencing.

Proposes an extension to the residential development at High Farm, Teesville on the adjacent green wedge land as the site is in a sustainable location, is demonstrably deliverable and development can be achieved without unsatisfactorily compromising the green wedge.

Officer response:

The site was not considered as a potential allocation in the draft plan as it is currently the subject of an extant planning consent to provide an extensive area of community woodland as part of the current High Farm development. Notwithstanding numerical housing requirements (which have been assessed separately under Policy H1), the Council does not support this proposal for the following reasons: the development of 340 dwellings, in addition to the current consent for over 200 currently would significantly increase the level of development at this location and could undermine housing delivery on more sustainable and acceptable sites elsewhere in the north of Greater Eston, including the strategic allocation at Low Grange farm and the former Redcar & Cleveland Town Hall site; the site is not in an area of higher value housing and, as demonstrated by the current permission, it is questionable whether it could be established as an 'executive housing' location; and other, more suitable sites in higher value locations have been identified which will contribute significantly to the supply of detached and 'executive' properties in the borough.

Comment summary:

Would like to see two additional parcels of land at Galley Hill Farm, Guisborough included as a proposed housing allocation, in addition to the land already identified as a proposed allocation under Policy H3.24.

Officer response:

Sufficient land has been identified to meet the assessed housing requirement in the Plan, including significant development within the rural area, particularly at Guisborough. Taking into account subsequent permissions, this amounts to 40% of the supply and thereby corresponds to the indicative development ceiling in the revised locational strategy under Policy SD2. As the Guisborough sites could deliver upwards of 750 dwellings and may therefore be expected to meet local housing needs over the plan period, there are no proposals to allocate further housing land. Notwithstanding the above points, the proposals would result in a substantial and westwards extension, in addition to the major sites at Galley Hill Farm and Pine Hills, which would be unacceptable in sustainability terms.

Comment summary:

Would like to see land at Sparrow Park Farm, New Marske included as a proposed housing allocation.

Officer response:

Sufficient land has been identified to meet the assessed requirement in the Plan, including significant development within the rural area focussed on Guisborough and the other main settlements which, taking into account subsequent permissions, amounts to 40% of the supply and thereby corresponds to the indicative development ceiling in the revised locational strategy under Policy SD2. Notwithstanding the above points, priority has been given to the development of a new residential community on the nearby strategic site at Marske Inn Farm which is a more sustainable and acceptable site. The proposed development at Marske Inn Farm would be expected to meet housing requirements over a wide area, including New Marske. As such, further major allocations nearby are not required or justified and, without an indicative defensible boundary, development here could encourage further encroachment towards the A174 and the urban edge of Redcar at Mickle Dales and a scale of development which would be disproportionate to the size and sustainability of the settlement.

Section/Policy**Policy H 3****Housing Allocations****DLP1299****Full Name:** Mr Iain Pay**Organisation:** Taylor Wimpey North

Comment summary:

Object to draft policy H3 as it is not consistent with three key requirements of the NPPF; to provide sufficient housing allocations to significantly boost the supply of housing; to meet the objectively assessed needs of the Borough over the plan period and allow for an NPPF complaint buffer for the first five years of the plan. Notwithstanding the belief that the housing target is too low, the Council has not allocated sufficient sites to meet its proposed target. Welcome the proposed over-allocation, but suggest this should be increased to 20% to ensure delivery. The Council has not included a 20% buffer in the first five years, to ensure a five year deliverable supply.

Officer response:

The assessment of need has been carried out in accordance with the NPPF, with the most recent household growth projections (which are relatively low) assuming the starting point. The plan identifies a requirement in excess of the projections on a wide range of sites, which will significantly increase net housing supply and extend housing choice over the plan period, thereby supporting economic growth projections and aspirations and the achievement of a more stable and balanced population. Allowing for subsequent planning permissions, the potential estimated supply from identified sites over the specified plan period is 4,520, with a further 1,280 from year 16. The projections do not include the backlog from the previous plan period, which has not been bought forward as it broadly corresponds to recorded population losses over the Census period. Any evidence of pent-up demand is therefore likely to be limited and as such it is difficult to justify increasing the requirement. This approach ties in with the published NPPG (March 2014) which advises that planning authorities should take a view, based on available evidence, of the extent to which household formation rates are or have been constrained by supply. The level of supply included in the first delivery phase is sufficient to meet the minimum requirement plus a 20% buffer.

DLP208**Full Name:** Mr S M White**Organisation:** Campaign for the Protection of Rural England (CPRE)**Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

The Plan allocates too much greenfield land . This is creating far too much urban sprawl, which is contrary to para. 2.15 which states an aim to 'prevent uncontrolled urban sprawl' The significant development planned for East Cleveland will lead to an increase in traffic, therefore there will be more emissions which would be contrary to para 9.5 Transport and Accessibility. Neither does such development sustain the economy of the villages as these are effectively dormitory villages with the vast majority of people working and shopping away from their place of residence. The Council have contributed to this by approving large supermarkets away from the Local Centres

Officer response:

Priority has been given to the development of suitable and developable sites within existing settlements, however, as the identified potential is insufficient to meet the assessed housing requirement, it has been necessary to identify greenfield sites. The plan seeks to direct the majority development to the more urbanised north of the Borough which has better access to jobs, services and the strategic transport network and gives preference to sites within the most sustainable locations in or adjacent to the main settlements.

Section/Policy**Policy H 3****Housing Allocations****DLP270****Full Name:** Mr S Mitchell**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

Coatham Bowl, Redcar - I understand that the sale of this land is now "under offer" and that it has been earmarked for housing yet there is no mention of it in the plan. Why not? The inclusion of that site would mean less pressure to develop the more controversial sites such as the greenfield site at Marske Inn Farm (H3.01) and the school playing fields at Rye Hills School (H3.14) and Errington School (H3.16).

Officer response:

Following the Village Green ruling on Coatham Enclosure, realistic options for the future of the leisure centre site were considered. Redevelopment for a mixed-use leisure scheme is preferred as it would most effectively support the transformation and sustainable regeneration of the seafront area and the local economy. The Council's aspirations for the site are being supported through draft Local Plan Policy REG1.

The plan states the area has a 'Good supply of brownfield land' and that 'Prioritising, where possible, the development of previously developed (brownfield) land within existing settlements.' (6.30) Why then are there so many plans to develop on good agricultural land?

Officer response:

The Plan gives priority to developable brownfield land and other suitable land within current settlement boundaries. However, the potential of these sites is insufficient to meet the assessed housing requirement over the plan period in terms of the number of dwellings, location and the type of housing needed. Therefore, it has been necessary to allocate some greenfield site options in sustainable locations to make up the balance of the supply.

DLP178**Full Name:** Mr Jeremy Garside**Organisation:** Tees Valley Wildlife Trust**Agent Name:****Agent Organisation:****Submission type:** Web**Agree with section?:** No**Comment summary:**

It is not clear whether an ecological assessment has been carried out on all the proposed housing land allocations described here. The statement in the policy regarding the potential requirement for Appropriate Assessment would support this view. The plan may not be deliverable if the proposed housing sites cannot be developed without contravening UK wildlife law and European regulations.

Officer response:

The majority of site allocations have already been subject to a biodiversity audit. A stage 1 survey of all remaining sites will be undertaken prior to progressing the plan.

DLP22**Full Name:** G Walker**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

The largest single proposal is based on Marske which is outside the boundaries of the agreed development zone. It is totally inappropriate to the needs of the Marske community specifically and the Borough in general.

Officer response:

Under the plan-making process existing local planning policies, including settlement development limits, are subject to review. The strategic site at Marske Inn Farm is identified as an opportunity to establish a new residential community in a sustainable location and is required to meet housing requirements during the later part of the plan period. Preference has been given in the plan to developable sites within existing settlement boundaries. However, the availability of such sites is inadequate to meet assessed overall housing needs, both in terms of the quantity of dwellings and the type of housing provided. Therefore, the most suitable greenfield sites have been selected and Marske Inn Farm presents the most acceptable option for a major greenfield extension to the built-up area, due to the highly sustainable location providing superior public transport links, good access to other services, and the relatively limited physical and policy constraints affecting the site.

		Comment summary:	Officer response:
DLP21			
Full Name:	G Walker	The Borough does not need the development of large scale housing projects on greenfield sites but should rather concentrate on utilising the available small scale brownfield sites located in many of the local communities. There also appears to be an under utilisation of properties within town centres especially flats above shops etc. In addition, there is much more that could be done with local agencies to bring back into use empty or derelict properties where a change of designated use could bring benefits. Local, small scale projects which are absorbable by and appropriate to local communities will bring far greater benefits to those communities specifically and the Borough in general especially in conjunction with focussed development on employment and local infrastructure improvements in each area.	The plan allows for development of small sites within settlement boundaries and gives priority to viable brownfield sites. However, as the identified development potential within existing settlement boundaries would be inadequate to meet the assessed housing needs over the plan period both in terms of the quantity of development and type of housing required, it has also been necessary to identify the most suitable greenfield site options. In terms of vacant dwellings, the Council successfully operates, in conjunction with property owners, an empty homes scheme to bring long-term vacant properties back into residential use. However, the typical net gain in re-occupied properties is small relative to the housing requirement over the plan period.

DLP333			
Full Name:	Mr K J Greening	Would like to see land to the rear of Coach Road, Brotton included as a housing allocation. The sites have planning permission and work has commenced on one of the sites with the laying of foundations. The delay in bringing the sites forward has been due to ongoing litigation with regard to trespassing and the economic downturn. The housing market appears to be improving and the site is considered to be deliverable. The contamination and foundations associated with the adjacent railway line have been dealt with by the previous planning applications. The site is brownfield land and located inside development limits in a sustainable location with good access to nearby amenities and a bus stop.	The plan seeks to identify a range of suitable sites which can deliver and maintain a significant upturn in housing completions to meet requirements over the plan period. While the sustainable location is acknowledged, these backland sites have been rejected as allocations because there is a history of unimplemented planning permissions going back to the early 1990's and, notwithstanding the reported progress in resolving physical and legal constraints, without a developer in place, there remains an evidential risk that development would not progress as planned. At the same time, because the principle of accepting housing has previously been established and the land is without policy constraint, non-allocation does not prevent the sites being developed for housing independent of the plan. It is not therefore proposed to include the sites as allocations.

Strongly objects the the building of houses on greenfield sites in Ormesby and Nunthorpe. The traffic congestion on Ormesby Bank and Nunthorpe School is already bad and will be made worse by additional traffic. Impact on other services such as shops, schools, doctors and health services. There were previously proposals for a road across Swan's Corner which is badly needed to alleviate traffic. This cannot come forward if houses are built on here.

Officer response:

As noted in the policies for these sites, development proposals will be informed by detailed assessments in order to: consider the impact on local infrastructure including highways, drainage and community facilities; specify any required infrastructure investment which will be needed to enable acceptable proposals to proceed; and from that, establish realistic development potential. The previous scheme for a link road through Swan's Corner into Middlesbrough is no longer being pursued by either local authority following the outcome of feasibility studies several years ago.

Recommendation noted and will be considered.

DLP903**Full Name:** Michael Hoult**Organisation:** Highways Agency**Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** In Part**Comment summary:**

Policy H3 should be strengthened by incorporating table 6 Housing Allocations. To support the safe and efficient operation of the Strategic Road Network (SRN) and to ensure that it adequately supports the provision of future development and contributes towards sustainable economic growth, the Agency wishes to consider the potential impacts of the preferred sites on the network. To that end, regard will be had to the supporting transport and infrastructure evidence base, the model assessment report and the Agency's own study.

Officer response:

Policy H3 sets out the reasons why housing allocations are required. Thereafter the supporting text follows a logical sequence of deducting current commitments (Table 5) from the requirement before identifying the residual requirement through the allocations in Table 6. However, the Council agrees with this recommendation as the strength of such a key policy should take precedence over the layout of the document. The policy will therefore be amended accordingly. The Council welcomes the proposal to further explore potential impacts of developments on the SRN, and is keen to engage with the Highways Agency, as required, in completing this work to facilitate the smooth progression of the plan.

Comment summary:

No need for this amount of new housing, as there are lots of houses for sale in the area. New development is often designed poorly and does not reflect local character and distinctiveness. Increased congestion. The area is prone to flooding as shown on by the British Geological Survey Groundwater Flood Susceptibility map for the area. Development should be on brownfield sites and not greenfield. The site is not located close to the main employment areas, thus reducing the distances people need to travel. The plan will not safeguard and enhance Marske district centre. The plan would damage the distinctive character of Marske. Housing plan will not help diversify the economy. Housebuilding jobs would be temporary and jobs in proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal and low paid. The plan would harm biodiversity and geodiversity interests. The proposals would damage the strategic gap between Marske and New Marske. No plan to create new jobs, healthcare or education provision, so existing services will be put at risk. Marske should not be included within the conurbation area. High density housing is not appropriate in Marske. Proposed single carriageway under Marske railway bridge would make congestion worse.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre and enhance its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood

risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement.

Comment summary:

No need for more housing. Lots of houses for sale and the population is declining. Deletion of planned school will put extra pressure on existing schools and cause more traffic. There already congestion and the proposals will make this worse. Marske already suffers from flooding and the proposals would make this worse. Northumbrian Water admit they could not deal with more water coming from the site. Further development would ruin the character of the village.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Agent Organisation:

Submission type: Letter

Agree with section?: No

Comment summary:

No need for this amount of new housing, as there are lots of houses for sale in the area. New development is often designed poorly and does not reflect local character and distinctiveness. Increased congestion. The area is prone to flooding as shown on by the British Geological Survey Groundwater Flood Susceptibility map for the area. Development should be on brownfield sites and not greenfield. The site is not located close to the main employment areas, thus reducing the distances people need to travel. The plan will not safeguard and enhance Marske district centre. The plan would damage the distinctive character of Marske. Housing plan will not help diversify the economy. Housebuilding jobs would be temporary and jobs in proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal and low paid. The plan would harm biodiversity and geodiversity interests. The proposals would damage the strategic gap between Marske and New Marske. No plan to create new jobs, healthcare or education provision, so existing services will be put at risk. Marske should not be included within the conurbation area. High density housing is not appropriate in Marske. Proposed single carriageway under Marske railway bridge would make congestion worse.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre and enhance its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

Increased congestion. The area is prone to flooding as shown on by the British Geological Survey Groundwater Flood Susceptibility map for the area. Development should be on brownfield sites and not greenfield. The site is not located close to the main employment areas, thus reducing the distances people need to travel. The plan will not safeguard and enhance Marske district centre. The plan would damage the distinctive character of Marske. Housing plan will not help diversify the economy. Housebuilding jobs would be temporary and jobs in proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal and low paid. The plan would harm biodiversity and geodiversity interests. The proposals would damage the strategic gap between Marske and New Marske. No plan to create new jobs, healthcare or education provision, so existing services will be put at risk. Marske should not be included within the conurbation area. High density housing is not appropriate in Marske. Proposed single carriageway under Marske railway bridge would make congestion worse.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre and enhance its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

Marske Inn Farm Strategic Site

DLP861		Comment summary:
Full Name:	A Dawson	No need for more housing. Lots of houses for sale and the population is declining. Deletion of planned school will put extra pressure on existing schools and cause more traffic. There already congestion and the proposals will make this worse. Marske already suffers from flooding and the proposals would make this worse. Northumbrian Water admit they could not deal with more water coming from the site. Further development would ruin the character of the village.

Comment summary:

We oppose any more development to our 'village' of Marske-by-the-Sea. The greenfield and brownfield sites should remain as they are to protect the environment, agriculture and wildlife. The existing Sustainable Urban Drainage System (SUDS) cannot cope with the current excess run-off water, so the installation of more of these huge collection tanks to facilitate the proposed development will surely cause more release of run-off water causing high risk of flooding to the majority of Marske which is geographically lower than the proposed development site. This again is a risk to the environment and human health. Unemployment in the area is already above the national average, so more housing, more people, more unemployment. Where are the jobs going to be created? Is this proposed development just council greed? More housing, more people, more revenue from rates, etc.

Officer response:

The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The policy indicates that the proposals will be expected to provide a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking account the impact of the development on the landscape. In addition, the policy requires a landscape assessment and appropriate landscaping scheme throughout the site, including a deep planting buffer towards the A174 which reinforces the strategic gap with New Marske. Detailed consideration of the impact of the proposals upon the natural environment will be made as part of the planning application process. The site comprises of predominantly Grade 3b land within the Agricultural Land Classification, which is not considered to be the best and most versatile agricultural land. Whilst some of the site is considered to be Grade 3a, it is considered that the loss of these relatively small areas of higher quality agricultural land would be outweighed by the benefits of the development in helping to meet identified housing needs in a sustainable location. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this

area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre and enhance its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

Comment summary:

No need for this amount of new housing, as there are lots of houses for sale in the area. New development is often designed poorly and does not reflect local character and distinctiveness. Increased congestion. The area is prone to flooding as shown on by the British Geological Survey Groundwater Flood Susceptibility map for the area. Development should be on brownfield sites and not greenfield. The site is not located close to the main employment areas, thus reducing the distances people need to travel. The plan will not safeguard and enhance Marske district centre. The plan would damage the distinctive character of Marske. Housing plan will not help diversify the economy. Housebuilding jobs would be temporary and jobs in proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal and low paid. The plan would harm biodiversity and geodiversity interests. The proposals would damage the strategic gap between Marske and New Marske. No plan to create new jobs, healthcare or education provision, so existing services will be put at risk. Marske should not be included within the conurbation area. High density housing is not appropriate in Marske. Proposed single carriageway under Marske railway bridge would make congestion worse.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre and enhance its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement.

Comment summary:

No need for more housing. Lots of houses for sale and the population is declining. Deletion of planned school will put extra pressure on existing schools and cause more traffic. There already congestion and the proposals will make this worse. Marske already suffers from flooding and the proposals would make this worse. Northumbrian Water admit they could not deal with more water coming from the site. Further development would ruin the character of the village.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood

risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. No need for more housing. Lots of houses for sale and the population is declining. Deletion of planned school will put extra pressure on existing schools and cause more traffic. There already congestion and the proposals will make this worse. Marske already suffers from flooding and the proposals would make this worse. Northumbrian Water admit they could not deal with more water coming from the site. Further development would ruin the character of the village.

Officer response:

The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where

possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement.

Comment summary:

Housing: You state that 'There are areas in the Borough with high demand for housing supporting high price range properties. These contrast with areas of virtual market collapse, poor conditions and dereliction. Significant parts of the local market are characterised by obsolete and outdated housing, originally built to provide homes to support an industrial infrastructure that no longer exists. Much of the stock fails to meet the Government's decency standard, and does not meet people's aspirations'. Clearly none of this applies to Marske. On RightMove alone recently there were 533 houses for sale within a one mile radius of TS11. Design: You state that 'Recent housing and commercial developments have too often failed to reflect local distinctiveness with little effort being given to creating buildings or a sense of place that reflect and enhance the local character or distinctiveness'. Enough said? Transport. You state that 'car ownership is increasing and traffic problems related to car-borne commuting are likely to follow'....The frequency of rail services has decreased, particularly the direct services to and from Saltburn to Middlesbrough'. The planned development at Marske would exacerbate this. Policy CS1. Securing a Better Quality of Life. 3.2. You highlight these two points. 'Controlling development in areas at risk of flooding'. Marske is clearly in an area of flood risk. Please refer to the British Geological Survey Groundwater Flood Risk Susceptibility Map for the area. 'Reclaiming and reusing derelict land'. This development does not meet these conditions. You state 'Greenfield land may need to be released over the plan period in and around the urban areas to meet the housing requirements.' It is not clear how this condition is met here. You also state 'More new housing in the urban area would mean people have the potential to live closer to their place of work, shops and services. This would mean a reduced need to travel long distances, stabilising traffic levels and congestion in the Borough'. Clearly this condition is not met here and it is likely to add to the congestion you refer to in the section on Transport. Policy CS5 Spatial Strategy for Redcar Area. You state that you will 'Promote new housing development on other sites in Redcar, prioritising previously developed land and sites within the urban area that will enable the development of community facilities;' 'Safeguard and enhance Marske district centre'. Your Housing Plan seems to do neither. You state 'Marske has always maintained its own distinctive character'. This would be completely compromised by your Housing Plan, not just to the detriment of Marske, but to the detriment of the whole of East Cleveland. You state that you aim to 'diversify employment opportunities'. This Housing Plan will not do this. Building jobs will be temporary and may well go to established contract teams. If you ARE able to sell the hotel, fast food development, petrol station, restaurant etc., these jobs will be few and by definition will be service base and more than likely zero hour / minimum wage contacts. You do not make clear where the 3-4,000 new residents will actually find employment. You state that the Draft Plan will 'safeguard and enhance the biodiversity and geodiversity interests of the coastal areas and of open areas in and around the town;'. Your Housing Plan will do neither and will remove a large tract of arable land close to a nearby wooded area. Policy CS23 Green Infrastructure. You state 'The following green areas will be protected and, where appropriate, enhanced to improve their quality, value, multi-functionality and accessibility: a) Strategic gaps between Marske and New Marske; Marske and Saltburn; b) The green wedges in the conurbation'. Clearly this is the absolute opposite of what is proposed in the Housing Plan. Population Change. You highlight that 'out migration' will impact 'housing provision, economic growth and service delivery'. I assume that by this you do not mean 'out migration' will mean we need more houses or create more jobs? Urban Deprivation. You highlight that the area has a 'weak housing market, oversupply of particular types of housing, few local employment opportunities'. These will all be made worse by the planned housing development. 2.12 You state that 'Communities will have good access to quality jobs, healthcare and education', yet as far as I am aware there is no linked plan to create any of these in advance of or concurrent with this development. Existing services will be put at risk. ONS stats show that unemployment in R&C is running at 11.9%. You state that 'Attracting the economically active to live in the Borough will have helped to reverse the trend of population decline and contributed to establishing an adaptable and more diverse well-skilled work force'. This only applies if the 'economically active' have JOBS to go to. Before any development on this scale is allowed to take place you need to

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. ensure that the existing housing stock is saleable, new stock is built on brownfield sites and there is DEMAND for this sustained by new jobs. None of this appears to be in the Plan at the moment. Policy CS2 Locational Strategy. Indicates that 70% of new development will be in 'conurbations'. Point 3.6. 'Settlement Hierarchy' then lists Marske as a 'conurbation' whereas New Marske is not. You also state that 'Priority will be given to the reuse of previously developed land and existing buildings' neither of which is the case here. Classifying Marske as a 'conurbation' does not reflect the needs or make up of the area in question and this mis-classification has an impact on Policy CS13. Meeting the Housing Requirements. 5.6. 'a larger proportion will be placed in the conurbation'. I suggest that Marske has been classified as part of the conurbation as a matter of convenience to the council. You state that 'Rural economic development in the Borough will focus particularly on the expansion of the tourism and outdoor leisure industry.'™ You fail to make clear how this will quickly create new jobs for the people living in the new housing projected against the build rate. 5. CREATING SUSTAINABLE COMMUNITIES. 5.2. You state that you aim to ensure 'housing is located where residents will have access to jobs, facilities and services whether they have access to a car or public transport or not'. You do not demonstrate how this condition is met within the Housing Plan. 5.3. You state that 'providing new housing' will 'attract people back into the area to stabilise the community'. I maintain that this is wrong. Jobs are required first, or at the same time. Policy CS17. Housing Density. Advocates 'high density' housing in Marske. Why - this is inappropriate! Policy CS 26. Managing Travel Demand. You claim the Borough only has congestion problems in Redcar. You omit the problems getting in / out of Marske or along the single carriageway from Saltburn towards Redcar, or the congestion issue that your planned single carriageway at Marske railway bridge will inevitably create. Policy CS 27. Improving Accessibility. Point 7.9 is too ambivalent and will not deliver the necessary rail improvements.

risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. Comment summary:

No need for this amount of new housing, as there are lots of houses for sale in the area. New development is often designed poorly and does not reflect local character and distinctiveness. Increased congestion. The area is prone to flooding as shown on by the British Geological Survey Groundwater Flood Susceptibility map for the area. Development should be on brownfield sites and not greenfield. The site is not located close to the main employment areas, thus reducing the distances people need to travel. The plan will not safeguard and enhance Marske district centre. The plan would damage the distinctive character of Marske. Housing plan will not help diversify the economy. Housebuilding jobs would be temporary and jobs in proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal and low paid. The plan would harm biodiversity and geodiversity interests. The proposals would damage the strategic gap between Marske and New Marske. No plan to create new jobs, healthcare or education provision, so existing services will be put at risk. Marske should not be included within the conurbation area. High density housing is not appropriate in Marske. Proposed single carriageway under Marske railway bridge would make congestion worse.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre and enhance its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

Comment summary:

No need for more housing. Lots of houses for sale and the population is declining. Deletion of planned school will put extra pressure on existing schools and cause more traffic. There already congestion and the proposals will make this worse. Marske already suffers from flooding and the proposals would make this worse. Northumbrian Water admit they could not deal with more water coming from the site. Further development would ruin the character of the village.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood

risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement.

Comment summary:

There is a good supply of brownfield land, so why build on arable land. When did Marske become part of the conurbation? The plan says that Marske has its own distinctive character, so why destroy it? The philosophy that new housing contributes to economic growth is fundamentally flawed. Previous increased demand was linked to expansion of steel and chemicals industries, there is no link now. High unemployment. Jobs should be created before housing. Site is prone to flooding and development will increase likelihood of flooding. Increased congestion.

Officer response:

The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The existing policy framework, which was adopted in 2007, includes Marske within the conurbation. No changes are being proposed through the Local Plan. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. Comment summary:

In relation to the Marske Inn Farm proposal, this is obviously going to despoil the rural aspect of that part of East Cleveland. Mention is made of the strategic gap between the villages of Marske and New Marske. Indeed, at 6.43, it states, 'Policy N2 requires the retention of a strategic gap between Marske and New Marske [but] the development of the site will inevitably reduce the distance between the built up areas'. It goes on to say how this should be mitigated. The fact is that it cannot be mitigated and it should not be, the policy should be adhered to. The development is unnecessary, in terms of housing need, so nothing should over-ride the policy, which was implemented to maintain the rural aspect and the distinctiveness between the two villages. 6.36 states that this development 'provides an opportunity to achieve a major sustainable urban extension within the Borough'. Who decided that it is to be extended to become a major urban settlement?

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. Whilst it is noted that the scale of the development would be significant, it has been necessary for the Council to identify a strategic housing site of this scale to enable the delivery of a sufficient supply of housing to meet the identified housing needs of the borough across the plan period. After assessing several options in the conurbation area, which is the main focus for employment, population and development within the borough, the site was considered by the Council to present the most sustainable and acceptable option. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity.

The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre and enhance its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

Comment summary:

No need for this amount of new housing, as there are lots of houses for sale in the area. New development is often designed poorly and does not reflect local character and distinctiveness. Increased congestion. The area is prone to flooding as shown on by the British Geological Survey Groundwater Flood Susceptibility map for the area. Development should be on brownfield sites and not greenfield. The site is not located close to the main employment areas, thus reducing the distances people need to travel. The plan will not safeguard and enhance Marske district centre. The plan would damage the distinctive character of Marske. Housing plan will not help diversify the economy. Housebuilding jobs would be temporary and jobs in proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal and low paid. The plan would harm biodiversity and geodiversity interests. The proposals would damage the strategic gap between Marske and New Marske. No plan to create new jobs, healthcare or education provision, so existing services will be put at risk. Marske should not be included within the conurbation area. High density housing is not appropriate in Marske. Proposed single carriageway under Marske railway bridge would make congestion worse.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. Comment summary:

We live just down the road from the proposed development and there will be flooding and congestion from traffic coming through the quiet estate. Also schools in the neighbourhood can hardly cope with the amount of children they already have without adding more, I am also opposing against the hotel because with it being a small residential area there is no use for a hotel plus will it end up being a halfway house? with the homeless coming and going when they have nowhere to stay. The value of property will go down with the increase of traffic and there will also be rubbish getting dumped in the neighbourhood by customers coming away from the drive through, so this is why I am opposing the proposed development. Also there is the doctors situation " we can hardly get an appointment as it is now and that is without thousands of new residents needing one.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Comment summary:

The plan focuses primarily on Greenfield sites, rather than brownfield. It will reduce the appeal of our area. The extra housing is driven by developers rather than by demand. The type of housing on the main site, will predominantly have four bedroom detached houses on it. This is what the developer will look to build. These houses will not improve home ownership in the area. Brownfield sites developed in other areas of the borough such as Redcar and Greater Eston will enable smaller homes and homes more affordable to first time buyers. The problem is that developers won't make as their money in these areas so they are not as interested. Since 2006, agents working on behalf of the land owners of the South of Marske site have lobbied for development limits to be changed to the south of Marske. The proposals will cause great flooding issues in Marske if developed. The fact the whole local plans economic future rests on such a fanciful development is disturbing. The rural conurbation of Marske will be altered in both character and value. It is likely higher earners will move into Yorkshire away from Redcar and Cleveland due to the increased traffic congestion from this development. The Local Plan and the Economic Masterplan before it fail to mention high-tech or niche industry. They don't offer any alternative to the large industrial decline. The notion of creative industries has already failed in Redcar it doesn't offer enough money to purchase the kind of properties mentioned in the plan.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Tees Valley 2012 Strategic Housing Market Assessment (SHMA) provides the most up-to-date assessment of housing needs and aspirations in the borough and has been used to inform the policies within the plan. The plan overall seeks to meet the range of housing needs for different types of market and social housing, including increasing the supply of larger detached dwellings. The policy indicates that the development will be expected to provide a broad and appropriate housing mix, including the provision of affordable housing on-site. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The development limit boundaries are being reviewed as part of the process of updating the Local Plan. The existing development limits boundary would be amended to include the site within development limits. The amendment to development limits formed part of the consultation on the Local Plan. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas

most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. The Economic Development section of the Local Plan seeks to support all aspects of the economy, including high tech and niche industries. Policy ED6 indicates that high tech and knowledge driven development should be focused at Kirkleatham Business Park and Cleveland Gate Business Park. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport.

Comment summary:

No need for more housing. Lots of houses for sale and the population is declining. Deletion of planned school will put extra pressure on existing schools and cause more traffic. There already congestion and the proposals will make this worse. Marske already suffers from flooding and the proposals would make this worse. Northumbrian Water admit they could not deal with more water coming from the site. Further development would ruin the character of the village.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. Comment summary:

I am writing to object to the potential planning that has been mentioned for the Marske area. I am a resident of Marske and am raising my family within this beautiful and quiet village. I wish it to remain a village and not be expanded outside its capacity both concerning traffic and educational capacity within the schools as I do not want my family to be educated outside the area, if space within the schools become overburdened due to increased numbers of families moving to the area if the greenfields are developed upon. It is becoming more concerning the number of recent traffic concerns within Marske and I feel that increasing the housing will inevitably increase the amount of traffic, putting our children and elderly at even more risk especially concerning reducing the railway bridge access road to a single carriageway and enforcing lights. All this will do is reduce the chance that emergency services will arrive in time to save some of our community in their time of need. I would like to make it known that myself and my family chose Marske because of its size and safety and do not wish to lose that to money hungry developers.

Officer response:

Whilst it is noted that the scale of the development would be significant, it has been necessary for the Council to identify a strategic housing site of this scale to enable the delivery of a sufficient supply of housing to meet the identified housing needs of the borough across the plan period. After assessing several options in the conurbation area, which is the main focus for employment, population and development within the borough, the site was considered by the Council to present the most sustainable and acceptable option. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

Comment summary:

No need for this amount of new housing, as there are lots of houses for sale in the area. New development is often designed poorly and does not reflect local character and distinctiveness. Increased congestion. The area is prone to flooding as shown on by the British Geological Survey Groundwater Flood Susceptibility map for the area. Development should be on brownfield sites and not greenfield. The site is not located close to the main employment areas, thus reducing the distances people need to travel. The plan will not safeguard and enhance Marske district centre. The plan would damage the distinctive character of Marske. Housing plan will not help diversify the economy. Housebuilding jobs would be temporary and jobs in proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal and low paid. The plan would harm biodiversity and geodiversity interests. The proposals would damage the strategic gap between Marske and New Marske. No plan to create new jobs, healthcare or education provision, so existing services will be put at risk. Marske should not be included within the conurbation area. High density housing is not appropriate in Marske. Proposed single carriageway under Marske railway bridge would make congestion worse.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre and enhance its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

Comment summary:

My family and I have read the proposed Draft Local Plan for development on the Marske area and we strongly object. My family and the residents of Marske feel so strongly against these proposed developments because of the risk of increased flooding, the massive increase of traffic on such a small village. We feel this plan will destroy the character of Marske being known as a coastal village which has far to much history to loose. We would ask you to reconsider these plans and cancel them altogether.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Comment summary:

Proposals would damage the local character and distinctiveness of Marske. Proposals would create an increase in traffic congestion. The proposed policy regarding development in areas of flood risk ignores the fact that Marske is an area susceptible to flooding. It is not clear why Marske is considered to be a part of the conurbation. The plan indicates that development will be prioritised on brownfield land, which Marske Inn Farm is not. Plan indicates that housing will be located near to employment areas, but this site isn't. The policy supports high density housing, which is not appropriate.

Officer response:

The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already

recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

All aspirations to develop the land at Marske Inn Farm should be removed from the Draft Local Plan. Whilst permitting development at this site would clearly allow R&CBC to place a large tick against meeting their apparent housing requirements, it promises nothing but misery to the residents of Marske. It will result in more frequent and widespread flooding in our village. It will result in increased house insurance costs, assuming that we can get house insurance. It will result in increased traffic congestion and danger on our roads. It will result in increased pollution etc. as a result of the traffic increase. It will result in the children of Marske losing their right to a good education in their own village. It will result in an increased strain on existing local services. It will result in a lower quality of life for all Marske residents. It will rob Marske of its beauty, character and identity. It will be R&CBC's legacy - another run-down town that residents and businesses can't leave fast enough! Redcar and Cleveland Borough Council should pay more attention to the wishes of the residents of Marske and less to a pension fund from 180 miles away. Reading through these historical representation documents and the policies outlined in the Draft Local Plan suggests they are doing exactly the opposite.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand

for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. Policy SD4 of the Local Plan seeks to ensure that development is designed to a high standard, including ensuring that development will not have a significant adverse impact on the amenities of occupiers of existing or proposed nearby properties. The impact of the development upon residential amenity will be assessed as part of the planning application. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement.

Comment summary:

Concerned about impact of the development on our property and well being . Suffered flooding twice recently and are concerned about the increase in flooding as a result of development. Not clear why development is being proposed outside of development limits on a greenfield site, when the NPPF and plan prioritise development on brownfield land. We don't want or need a hotel or drive-through. Don't want four storey building which will be out of character with Marske.

Officer response:

Policy SD4 of the Local Plan seeks to ensure that development is designed to a high standard, including ensuring that development will not have a significant adverse impact on the amenities of occupiers of existing or proposed nearby properties. The impact of the development upon residential amenity will be assessed as part of the planning application. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The development limit boundaries are being reviewed as part of the process of updating the Local Plan. The existing development limits boundary would be amended to include the site within development limits. The amendment to development limits formed part of the consultation on the Local Plan. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel or drive-through restaurant. The policy already indicates that

the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. The design of the proposals will be considered at the planning application stage.

Comment summary:

Proposals would ruin the character of the village. This plan does not meet needs brought about by increased employment and corresponding requirements for extra housing or schools in the immediate area. The National Planning Policy Framework (NPPF) and indeed the council's own draft plan seek to prioritise the use of brown-field sites ahead of green-field sites. There is a stated need to ensure that existing green spaces are protected rather than over developed. Moreover the land in question is outside development limits. Concerned that the proposals would result in increased flooding. Norhumbrian Water have indicated that additional water cannot be discharged into existing infrastructure. Concerned about increased traffic and congestion, especially once the road is narrowed to a single lane under the railway bridge and traffic lights installed. Proposals would impact upon school place provision. Not acceptable that the developer has dropped provision of proposed school instead opting for a financial contribution. Inadequate consultation by the landowner. Proposals would not create jobs. Jobs for proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal. New houses do not create new jobs as construction jobs are temporary. Size and scale of the development would be disproportionate to Marske. As a resident of Marske, this development will adversely affect my family's quality of life in many ways; the environment, education, traffic & safety and healthcare (e.g. strain on G.P services).

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. Accessible open space will also be required as part of the development in accordance with Policy N3. The development limit boundaries are being reviewed as part of the process of updating the Local Plan. The existing development limits boundary would be amended to include the site within development limits. The amendment to development limits formed part of the consultation on the Local Plan. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater

flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. Whilst it is noted that the scale of the development would be significant, it has been necessary for the Council to identify a strategic housing site of this scale to enable the delivery of a sufficient supply of housing to meet the identified housing needs of the borough across the plan period. After assessing several options in the conurbation area, which is the

main focus for employment, population and development within the borough, the site was considered by the Council to present the most sustainable and acceptable option. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development.

Marske Inn Farm Strategic Site

Comment summary:

The main area for housing seems to be on the south side of the railway line at Marske and this will exacerbate the already existing traffic flow problems along the A174. This area is already well known as a flood risk problem affecting existing housing on the other side of the railway and to allow the development for housing to go ahead is nothing short of criminal.

Officer response:

This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place.

Section/Policy**Policy H 3.1****Marske Inn Farm Strategic Site**

DLP771**Full Name:** Mr Alan Hunter**Organisation:** English Heritage**Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

Policy H3.1 - it is important that, before land at Marke Inn Farm is allocated or approved for development, appropriate archaeological investigation takes place to ensure that the heritage significance of the site is fully understood and any loss (including harm to the setting of the adjacent scheduled ancient monument) is clearly outweighed by any overriding public benefit that cannot be met in any other way, otherwise the Council cannot assert that development on it will be sustainable. Given that pedestrian desire lines from the site to the town are likely to be across the monument, English Heritage would contend that separation would be harmful and undesirable. If it can be satisfactorily established that development can proceed without any unnecessary loss of heritage significance, efforts should be made to integrate the monument, perhaps through limited access and interpretation, thereby giving 'ownership' and sympathetic usage of it to the local community. English Heritage has already identified the potential negative implications for the historic environment of allocating Site H3.01 at Marske for development without a full understanding of the significance of the heritage that exists adjacent to, and probably exists on, the allocated land, and to carefully assess the extent of any harm to, or loss of, any significance in relation to any public benefits that the development might bring.

Officer response:

The policy will be amended to include more information on the archaeological requirements, including the need to undertake a prior evaluation of archaeological remains on the site. Reference has been made in the policy with regard to the need to agree a package of measures to conserve and enhance the appreciation and understanding of the scheduled monument. The Council will work closely with English Heritage to ensure that the impact of the development upon the scheduled monument would be acceptable and that its future is secured. The policy will be amended to include more information on the archaeological requirements, including the need to undertake a prior evaluation of archaeological remains within and adjacent to the site. Comment summary:

We oppose any more development to our 'village' of Marske-by-the-Sea. The greenfield and brownfield sites should remain as they are to protect the environment, agriculture and wildlife. The existing Sustainable Urban Drainage System (SUDS) cannot cope with the current excess run-off water, so the installation of more of these huge collection tanks to facilitate the proposed development will surely cause more release of run-off water causing high risk of flooding to the majority of Marske which is geographically lower than the proposed development site. This again is a risk to the environment and human health. Unemployment in the area is already above the national average, so more housing, more people, more unemployment. Where are the jobs going to be created? Is this proposed development just council greed? More housing, more people, more revenue from rates, etc.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the

drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked.

Where are the jobs going to be created? Is this proposed development just council greed? More housing, more people, more revenue from rates, etc.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The site comprises of predominantly Grade 3b land within the Agricultural Land Classification, which is not considered to be the best and most versatile agricultural land. Whilst some of the site is considered to be Grade 3a, it is considered that the loss of these relatively small areas of higher quality agricultural land would be outweighed by the benefits of the development in helping to meet identified housing needs in a sustainable location. The policy indicates that the proposals will be expected to provide a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking account of the impact of the development on the landscape. In addition, the policy requires a landscape assessment and appropriate landscaping scheme throughout the site, including a deep planting buffer towards the A174 which reinforces the strategic gap with New Marske. Detailed consideration of the impact of the proposals upon the natural environment will be made as part of the planning application process. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Comment summary:

No need for this amount of new housing, as there are lots of houses for sale in the area. New development is often designed poorly and does not reflect local character and distinctiveness. Increased congestion. The area is prone to flooding as shown on by the British Geological Survey Groundwater Flood Susceptibility map for the area. Development should be on brownfield sites and not greenfield. The site is not located close to the main employment areas, thus reducing the distances people need to travel. The plan will not safeguard and enhance Marske district centre. The plan would damage the distinctive character of Marske. Housing plan will not help diversify the economy. Housebuilding jobs would be temporary and jobs in proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal and low paid. The plan would harm biodiversity and geodiversity interests. The proposals would damage the strategic gap between Marske and New Marske. No plan to create new jobs, healthcare or education provision, so existing services will be put at risk. Marske should not be included within the conurbation area. High density housing is not appropriate in Marske. Proposed single carriageway under Marske railway bridge would make congestion worse.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre and enhance its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre and enhance its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

Comment summary:

No need for this amount of new housing, as there are lots of houses for sale in the area. New development is often designed poorly and does not reflect local character and distinctiveness. Increased congestion. The area is prone to flooding as shown on by the British Geological Survey Groundwater Flood Susceptibility map for the area. Development should be on brownfield sites and not greenfield. The site is not located close to the main employment areas, thus reducing the distances people need to travel. The plan will not safeguard and enhance Marske district centre. The plan would damage the distinctive character of Marske. Housing plan will not help diversify the economy. Housebuilding jobs would be temporary and jobs in proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal and low paid. The plan would harm biodiversity and geodiversity interests. The proposals would damage the strategic gap between Marske and New Marske. No plan to create new jobs, healthcare or education provision, so existing services will be put at risk. Marske should not be included within the conurbation area. High density housing is not appropriate in Marske. Proposed single carriageway under Marske railway bridge would make congestion worse.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre and enhance its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

Comment summary:

No need for this amount of new housing, as there are lots of houses for sale in the area. New development is often designed poorly and does not reflect local character and distinctiveness. Increased congestion. The area is prone to flooding as shown on by the British Geological Survey Groundwater Flood Susceptibility map for the area. Development should be on brownfield sites and not greenfield. The site is not located close to the main employment areas, thus reducing the distances people need to travel. The plan will not safeguard and enhance Marske district centre. The plan would damage the distinctive character of Marske. Housing plan will not help diversify the economy. Housebuilding jobs would be temporary and jobs in proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal and low paid. The plan would harm biodiversity and geodiversity interests. The proposals would damage the strategic gap between Marske and New Marske. No plan to create new jobs, healthcare or education provision, so existing services will be put at risk. Marske should not be included within the conurbation area. High density housing is not appropriate in Marske. Proposed single carriageway under Marske railway bridge would make congestion worse.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre and enhance its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. Comment summary:

We live just down the road from the proposed development and there will be flooding and congestion from traffic coming through the quiet estate. Also schools in the neighbourhood can hardly cope with the amount of children they already have without adding more, I am also opposing against the hotel because with it being a small residential area there is no use for a hotel plus will it end up being a halfway house? with the homeless coming and going when they have nowhere to stay. The value of property will go down with the increase of traffic and there will also be rubbish getting dumped in the neighbourhood by customers coming away from the drive through, so this is why I am opposing the proposed development.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre and enhance its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

Comment summary:

No need for this amount of new housing, as there are lots of houses for sale in the area. New development is often designed poorly and does not reflect local character and distinctiveness. Increased congestion. The area is prone to flooding as shown on by the British Geological Survey Groundwater Flood Susceptibility map for the area. Development should be on brownfield sites and not greenfield. The site is not located close to the main employment areas, thus reducing the distances people need to travel. The plan will not safeguard and enhance Marske district centre. The plan would damage the distinctive character of Marske. Housing plan will not help diversify the economy. Housebuilding jobs would be temporary and jobs in proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal and low paid. The plan would harm biodiversity and geodiversity interests. The proposals would damage the strategic gap between Marske and New Marske. No plan to create new jobs, healthcare or education provision, so existing services will be put at risk. Marske should not be included within the conurbation area. High density housing is not appropriate in Marske. Proposed single carriageway under Marske railway bridge would make congestion worse.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. House building is a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre and enhance its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

Comment summary:

No need for this amount of new housing, as there are lots of houses for sale in the area. New development is often designed poorly and does not reflect local character and distinctiveness. Increased congestion. The area is prone to flooding as shown on by the British Geological Survey Groundwater Flood Susceptibility map for the area. Development should be on brownfield sites and not greenfield. The site is not located close to the main employment areas, thus reducing the distances people need to travel. The plan will not safeguard and enhance Marske district centre. The plan would damage the distinctive character of Marske. Housing plan will not help diversify the economy. Housebuilding jobs would be temporary and jobs in proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal and low paid. The plan would harm biodiversity and geodiversity interests. The proposals would damage the strategic gap between Marske and New Marske. No plan to create new jobs, healthcare or education provision, so existing services will be put at risk. Marske should not be included within the conurbation area. High density housing is not appropriate in Marske. Proposed single carriageway under Marske railway bridge would make congestion worse.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across

the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The Local Plan seeks to support economic growth and job creation alongside providing an adequate supply of housing to meet identified needs. Comment summary:

Concerned about impact upon our property and well being. We have already been affected on two occasions by flood water and we are anxious about the added pressure that the planned expansion would put on the existing drainage system. We are aware that Northumbrian Water have advised that any surface run off cannot be directed into the existing system and are disturbed about the proposed use of a SUDS system on the site as this is likely to increase the likelihood of further flooding in the area. We also cannot understand why the Council is seeking to build in an area which is outside accepted development limits and is clearly a 'greenfield site', when the National Planning Policy Framework and your own draft plan seeks to prioritise the use of 'brownfield sites'. As long time residents and tax payers of Marske we do not feel that this plan considers the needs of the people in this area at all. We certainly don't want or need a 60 bed hotel or a drive through takeaway. There are a number of excellent hosteliies in the village who offer accommodation and there is arguably little market for more. Neither do we want 4 storey buildings in Marske which would be completely out of character with the the rest of the village and this proposal only seeks to further emphasise what little the planners know or care about this area.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. Comment summary:

My family and I have read the proposed Draft Local Plan for development on the Marske area and we strongly object. My family and the residents of Marske feel so strongly against these proposed developments because of the risk of increased flooding, the massive increase of traffic on such a small village. We feel this plan will destroy the character of Marske being known as a coastal village which has far too much history to lose. We would ask you to reconsider these plans and cancel them altogether.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Consider the Draft Plan as written ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet these do not prevent the application being considered. No demand for housing in Marske, as there are lots of properties for sale. Proposals would impact upon local distinctiveness. Traffic and congestion would be increased. Proposed development is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The proposed development would not allow people to live closer to their place of work, shops and services, therefore the development would add to congestion. Plan does not prioritise development on previously developed land. Proposals would harm Marske district centre. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land close to a nearby wooded area. Proposal will not protect and enhance Strategic gaps between Marske and New Marske; Marske and Saltburn, and the green wedges in the conurbation. Population is declining and is a high unemployment rate. No plan to create jobs in advance of the housing. Local services would be put at risk. High density housing is not appropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

Consider the Draft Plan as written ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet these do not prevent the application being considered. No demand for housing in Marske, as there are lots of properties for sale. Proposals would impact upon local distinctiveness. Traffic and congestion would be increased. Proposed development is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The proposed development would not allow people to live closer to their place of work, shops and services, therefore the development would add to congestion. Plan does not prioritise development on previously developed land. Proposals would harm Marske district centre. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land close to a nearby wooded area. Proposal will not protect and enhance Strategic gaps between Marske and New Marske; Marske and Saltburn, and the green wedges in the conurbation. Population is declining and is a high unemployment rate. No plan to create jobs in advance of the housing. Local services would be put at risk. High density housing is not appropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. Comment summary:

Consider the Draft Plan as written ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet these do not prevent the application being considered. No demand for housing in Marske, as there are lots of properties for sale. Proposals would impact upon local distinctiveness. Traffic and congestion would be increased. Proposed development is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The proposed development would not allow people to live closer to their place of work, shops and services, therefore the development would add to congestion. Plan does not prioritise development on previously developed land. Proposals would harm Marske district centre. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land close to a nearby wooded area. Proposal will not protect and enhance Strategic gaps between Marske and New Marske; Marske and Saltburn, and the green wedges in the conurbation. Population is declining and is a high unemployment rate. No plan to create jobs in advance of the housing. Local services would be put at risk. High density housing is not appropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Consider the Draft Plan as written ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet these do not prevent the application being considered. No demand for housing in Marske, as there are lots of properties for sale. Proposals would impact upon local distinctiveness. Traffic and congestion would be increased. Proposed development is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The proposed development would not allow people to live closer to their place of work, shops and services, therefore the development would add to congestion. Plan does not prioritise development on previously developed land. Proposals would harm Marske district centre. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land close to a nearby wooded area. Proposal will not protect and enhance Strategic gaps between Marske and New Marske; Marske and Saltburn, and the green wedges in the conurbation. Population is declining and is a high unemployment rate. No plan to create jobs in advance of the housing. Local services would be put at risk. High density housing is not appropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

Once again I am having to raise an objection to the proposed housing development in Marske. It does seem totally unnecessary and unsuitable for this area of Marske. My main concern is the way it will change the character of Marske. People have paid a premium to live in Marske and may wonder why they have done so. Also the risk of flooding is high as the land proposed is often flooded and causes flooding to nearby housing, being I believe marshland. Will it be another case of bad planning and people buying new houses which are constantly being flooded, as has happened in Redcar. What about the railway line, surely the railway authorities have something to say about this. Please could someone explain why we need a hotel and park and ride - park and ride to where for goodness sake. Also we have a lot of new houses adjoining Marske, The Ings etc. I can understand people need houses but we do not really have enough work in the area for the people who already live here to support this. I am beginning to wonder who the individuals are in the Council who are pushing this and am sure that once the people of Marske know who they are for definite, they will make sure these individuals are no longer on the Council to represent us, as they are not carrying out or listening to the wishes of the people of Marske. Surely there is enough land where houses could be built in the area before taking over arable land, which we will need in the future for food production. I am sure that one way or another the Council will have their way by whatever means and most people feel the same but it is not very democratic.

Officer response:

The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-thru restaurant or petrol filling station. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural

assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. The site comprises of predominantly Grade 3b land within the Agricultural Land Classification, which is not considered to be the best and most versatile agricultural land. Whilst some of the site is considered to be Grade 3a, it is considered that the loss of these relatively small areas of higher quality agricultural land would be outweighed by the benefits of the development in helping to meet identified housing needs in a sustainable location. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

DLP665**Full Name:** Sylvia Evans**Organisation:****Agent Name:****Agent Organisation:****Submission type:** Letter**Agree with section?:** No**Comment summary:**

It seems obvious that the plan is to drastically lower the quality of life for the existing residents of Marske. Why would the Strategic Planning Team do this? Causing a glut of housing would be really counter-productive for this area. My objections are exactly as all those listed by the www.stopthehouses.co.uk website, along with those on the Word document available from the website. No doubt the Strategic Planning Team will be familiar with these objections - so to save time for all concerned, please accept them as my objections.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. Policy SD4 of the Local Plan seeks to ensure that development is designed to a high standard, including ensuring that development will not have a significant adverse impact on the amenities of occupiers of existing or proposed nearby properties. The impact of the development upon residential amenity will be assessed as part of the planning application.

Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Consider the Draft Plan as written ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet these do not prevent the application being considered. No demand for housing in Marske, as there are lots of properties for sale. Proposals would impact upon local distinctiveness. Traffic and congestion would be increased. Proposed development is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The proposed development would not allow people to live closer to their place of work, shops and services, therefore the development would add to congestion. Plan does not prioritise development on previously developed land. Proposals would harm Marske district centre. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land close to a nearby wooded area. Proposal will not protect and enhance Strategic gaps between Marske and New Marske; Marske and Saltburn, and the green wedges in the conurbation. Population is declining and is a high unemployment rate. No plan to create jobs in advance of the housing. Local services would be put at risk. High density housing is not appropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Consider the Draft Plan as written ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet these do not prevent the application being considered. No demand for housing in Marske, as there are lots of properties for sale. Proposals would impact upon local distinctiveness. Traffic and congestion would be increased. Proposed development is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The proposed development would not allow people to live closer to their place of work, shops and services, therefore the development would add to congestion. Plan does not prioritise development on previously developed land. Proposals would harm Marske district centre. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land close to a nearby wooded area. Proposal will not protect and enhance Strategic gaps between Marske and New Marske; Marske and Saltburn, and the green wedges in the conurbation. Population is declining and is a high unemployment rate. No plan to create jobs in advance of the housing. Local services would be put at risk. High density housing is not appropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. Comment summary:

Consider the Draft Plan as written ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet these do not prevent the application being considered. No demand for housing in Marske, as there are lots of properties for sale. Proposals would impact upon local distinctiveness. Traffic and congestion would be increased. Proposed development is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The proposed development would not allow people to live closer to their place of work, shops and services, therefore the development would add to congestion. Plan does not prioritise development on previously developed land. Proposals would harm Marske district centre. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land close to a nearby wooded area. Proposal will not protect and enhance Strategic gaps between Marske and New Marske; Marske and Saltburn, and the green wedges in the conurbation. Population is declining and is a high unemployment rate. No plan to create jobs in advance of the housing. Local services would be put at risk. High density housing is not appropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

Comment summary:

Consider the Draft Plan as written ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet these do not prevent the application being considered. No demand for housing in Marske, as there are lots of properties for sale. Proposals would impact upon local distinctiveness. Traffic and congestion would be increased. Proposed development is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The proposed development would not allow people to live closer to their place of work, shops and services, therefore the development would add to congestion. Plan does not prioritise development on previously developed land. Proposals would harm Marske district centre. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land close to a nearby wooded area. Proposal will not protect and enhance Strategic gaps between Marske and New Marske; Marske and Saltburn, and the green wedges in the conurbation. Population is declining and is a high unemployment rate. No plan to create jobs in advance of the housing. Local services would be put at risk. High density housing is not appropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The proposals would likely increase the usage of Marske district centre, having a positive impact upon its vitality and viability. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

The local authority has not and cannot justify such a development in this area. Due consideration has not been given to the increased traffic volume – the roads are already congested. We already suffer from extensive smells and associated problems from the sewerage works and outlets. Additional properties there would be an increase in sewerage. For the council to say that this has been passed on one vote is undemocratic. As far as I am aware, many of the local councillors serving on the Borough and making decisions about it, no longer live in the Borough they serve – again undemocratic. The link provided on your website presents residents with an 'impenetrable' list of PDFs without the necessary text or links to make consultation easy or meaningful. The Plan as written appears to offer safeguards against the proposed housing developments threatening Marske notably (R/2013/0669/OOM), yet these do not prevent the application being considered. Already lots of houses for sale in the area. No need for new housing. Proposals would damage local distinctiveness. Proposals would make traffic worse. The proposals would make existing flooding problems worse. Site is not close to jobs, which means longer distances to travel and more congestion. Priority should be given to the development of brownfield sites. The proposals would harm Marske district centre. There are no jobs in the area. Building jobs will be temporary and jobs from proposed hotel/drive-through etc, would be few and low paid. Proposals would damage biodiversity and geodiversity. Strategic Gap would be damaged. There is a declining population. The area has a weak housing market, so no demand for housing. Existing local services would be put at risk.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The policy already requires the resolution of water supply, sewerage and drainage requirements including off-site infrastructure enhancements, prior to development taking place. The Council's Cabinet approved the draft Local Plan for consultation in September 2013. The Cabinet is established to undertake executive functions of the Council in accordance with the constitution. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council

has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The proposals are likely to increase the use of Marske district centre and improve its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-thru restaurant or petrol filling station. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development.

Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. Section/Policy**Policy H 3.1****Marske Inn Farm Strategic Site**

DLP1263**Full Name:** England & Lyle
(private clients)**Organisation:****Agent Name:** Mr Ian Lyle**Agent Organisation:** England & Lyle**Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

We object to the identification of the scale of land currently being proposed for housing development under Policy H3.1. Marske is neither physically nor functionally part of the conurbation but a free-standing settlement with its own character. It does not form part of the conurbation and should not therefore be identified as a strategic location suitable for development that is needed to address the housing needs of the wider conurbation. Alternative options are available such as our clients' land at Woodcock Wood. Any housing allocation at Marske should be proportionate to the scale of the settlement. As such the scale of development proposed through H3.1 is disproportionately large and unsound.

Officer response:

The existing policy framework includes Marske within the conurbation. No changes are being proposed through the Local Plan. Whilst it is noted that the scale of the development would be significant, it has been necessary for the Council to identify a strategic housing site of this scale to enable the delivery of a sufficient supply of housing to meet the identified housing needs of the borough across the plan period. After assessing several options in the conurbation area, which is the main focus for employment, population and development within the borough, the site was considered by the Council to present the most sustainable and acceptable option.

We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. Comment summary:

The main area for housing seems to be on the south side of the railway line at Marske and this will exacerbate the already existing traffic flow problems along the A174. This area is already well known as a flood risk problem affecting existing housing on the other side of the railway and to allow the development for housing to go ahead is nothing short of criminal.

Officer response:

This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Comment summary:

The local authority has not and cannot justify such a development in this area. Due consideration has not been given to the increased traffic volume – the roads are already congested. We already suffer from extensive smells and associated problems from the sewerage works and outlets. Additional properties there would be an increase in sewerage. For the council to say that this has been passed on one vote is undemocratic. As far as I am aware, many of the local councillors serving on the Borough and making decisions about it, no longer live in the Borough they serve – again undemocratic. The link provided on your website presents residents with an 'impenetrable' list of PDFs without the necessary text or links to make consultation easy or meaningful. The Plan as written appears to offer safeguards against the proposed housing developments threatening Marske notably (R/2013/0669/OOM), yet these do not prevent the application being considered. Already lots of houses for sale in the area. No need for new housing. Proposals would damage local distinctiveness. Proposals would make traffic worse. The proposals would make existing flooding problems worse. Site is not close to jobs, which means longer distances to travel and more congestion. Priority should be given to the development of brownfield sites. The proposals would harm Marske district centre. There are no jobs in the area. Building jobs will be temporary and jobs from proposed hotel/drive-through etc, would be few and low paid. Proposals would damage biodiversity and geodiversity. Strategic Gap would be damaged. There is a declining population. The area has a weak housing market, so no demand for housing. Existing local services would be put at risk.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The policy already requires the resolution of water supply, sewerage and drainage requirements including off-site infrastructure enhancements, prior to development taking place. The Council's Cabinet approved the draft Local Plan for consultation in September 2013. The Cabinet is established to undertake executive functions of the Council in accordance with the constitution. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council

has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The proposals are likely to increase the use of Marske district centre and improve its vitality and viability as a result. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-thru restaurant or petrol filling station. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development.

Comment summary:

Already lots of properties for sale in the area. No demand for new houses. Increased traffic and congestion. The area is prone to flooding. The development will make existing situation worse. Development should be on brownfield land, not greenfield land. Development should be close to where the jobs are, this site isn't. Proposals would destroy the character of the village. The population is declining. The area has a weak housing market, which would be made worse by the development. Local services would be put at risk. Jobs are required before new housing. The area has a high unemployment rate. High density housing is not appropriate in Marske. Proposals would increase traffic problems, especially the proposed single carriageway under the railway bridge.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development

proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

No need for this amount of new housing, as there are lots of houses for sale in the area. New development is often designed poorly and does not reflect local character and distinctiveness. Increased congestion. The area is prone to flooding as shown on by the British Geological Survey Groundwater Flood Susceptibility map for the area. Development should be on brownfield sites and not greenfield. The site is not located close to the main employment areas, thus reducing the distances people need to travel. The plan will not safeguard and enhance Marske district centre. The plan would damage the distinctive character of Marske. Housing plan will not help diversify the economy. Housebuilding jobs would be temporary and jobs in proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal and low paid. The plan would harm biodiversity and geodiversity interests. The proposals would damage the strategic gap between Marske and New Marske. No plan to create new jobs, healthcare or education provision, so existing services will be put at risk. Marske should not be included within the conurbation area. High density housing is not appropriate in Marske. Proposed single carriageway under Marske railway bridge would make congestion worse.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. Comment summary:

Concerns over flooding. The proposals will put extra traffic on already congested roads. Believe restricting the traffic under the railway bridge to one lane, would make things even worse. Concerns over the impact of the proposals on local services and infrastructure, including schools. A new school was originally proposed, but this has been dropped. There has been insufficient public consultation on the proposals. Site is arable land and could have significant wildlife value. Marske is already overdeveloped and any more development would harm the character of the village. The National Planning Policy Framework (NPPF) and indeed the council's own draft plan seek to prioritise the use of brown-field sites ahead of green-field sites. I urge the council to look for more appropriate sites for such development.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood

risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement.

However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Plan is ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet does not prevent the application being considered. Already a number of houses for sale in Marske. Development would exacerbate problems related to car-borne commuting. Is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The character of Marske would be compromised. Will impact on biodiversity and geodiversity, and result in the loss of arable land. Will impact on Strategic Gap between Marske and New Marske. No linked plan to create access to jobs, healthcare and education in advance of or concurrent with this development. Proposal will create very limited employment opportunities for new residents.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The policy already indicates that the development will be expected to be a well-designed and coordinated development which successfully integrates land uses

within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The Policy indicates that the Council will seek to secure community facilities required as part of the development, including a primary school. It is anticipated that any new primary school required, will be delivered on site as part of the development. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked.

Comment summary:

Consider the Draft Plan as written ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet these do not prevent the application being considered. Housing: There is not high demand for housing supporting high price range properties nor virtual market collapse, poor conditions and dereliction in Marske. On RightMove alone recently there were 533 houses for sale within a one mile radius of TS11. Design: Development fails to reflect local distinctiveness with little effort being given to creating buildings or a sense of place that reflect and enhance the local character or distinctiveness. Transport. The planned development at Marske would exacerbate problems related to car borne commuting. Frequency of trains has also decreased. Policy CS1. Securing a Better Quality of Life. Proposed development is in an area of flood risk and does not support the reclaiming and reusing of derelict land. The proposed development would not allow people to live closer to their place of work, shops and services, therefore the development would add to congestion. Policy CS5 Spatial Strategy for Redcar Area. The Plan does not prioritise housing development on previously developed land and sites within the urban area that will enable the development of community facilities. Plan also does not safeguard and enhance Marske district centre and compromises the ability of Marske to maintain its own distinctive character. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land close to a nearby wooded area. Policy CS23 Green Infrastructure. Proposal will not protect and enhance Strategic gaps between Marske and New Marske; Marske and Saltburn, and the green wedges in the conurbation. Additionally I object as follows: Population Change. I assume you do not mean that 'out migration' will mean we need more houses or create more jobs? Urban Deprivation. A 'weak housing market, oversupply of particular types of housing, few local employment opportunities', will all be made worse by the planned housing development. No linked plan to create access to jobs, healthcare and education in advance of or concurrent with this development. Existing services will be put at risk. Will only attract the economically active if jobs are available. Need to ensure existing housing is saleable, new stock is on brownfield land and there is DEMAND for development sustained by new jobs. Policy CS2 Locational Strategy. Priority is not given to the re-use of previously developed land or existing buildings. Marske is wrongly classified as being in the conurbation which does not reflect the make-up or needs of the area. It is not clear how focussing on the tourism and outdoor leisure industry will quickly create new jobs for the people living in the new housing projected against the build rate. 5. CREATING SUSTAINABLE COMMUNITIES. 5.2. You do not demonstrate how housing will be located where residents will have access to jobs, facilities and services whether they have access to a car or public transport or not. 5.3. Jobs are required first, or at the same time as housing to attract people back and stabilise the community. Policy CS17. Housing Density. Advocates 'high density' housing in Marske. This is inappropriate. Policy CS 27. Improving Accessibility. Point 7.9 is too ambivalent and will not deliver the necessary rail improvements.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement.

Comment summary:

Plan is ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet does not prevent the application being considered. Already a number of houses for sale in Marske. Development would exacerbate problems related to car-borne commuting. Is in an area of flood risk and does not support the reclaiming and reusing of derelict land. Does not prioritise sites within the urban area that will enable the development of community facilities. Would not allow people to live closer to their place of work, shops and services. Plan does not safeguard and enhance Marske district centre and compromises the ability of Marske to maintain its own distinctive character. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land. Proposal will not protect and enhance Strategic gaps between Marske and New Marske. No linked plan to create access to jobs, healthcare and education in advance of or concurrent with this development. Proposal will create very limited employment opportunities for new residents. Marske is wrongly classified as being in the conurbation which does not reflect the make-up or needs of the area. High density housing in Marske is inappropriate.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage

systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The policy seeks to deliver strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The community facilities are expected to be of a neighbourhood scale to meet the day to day needs of the new development and therefore any impact upon Marske District Centre will be limited. Any proposal for retail development over 500m² on the site will be expected to be supported by a retail impact assessment in accordance with Policy ED1, to ensure that the proposals would not have a significant adverse impact upon Marske District Centre. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. The design of the proposals will be considered at the planning application stage. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The site comprises of predominantly Grade 3b land within the Agricultural Land Classification, which is not considered to be the best and most versatile agricultural land. Whilst some of the site is considered to be Grade 3a, it is considered that the loss of these relatively small areas of higher quality agricultural land would be outweighed by the benefits of the development in helping to meet identified housing needs in a sustainable location. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for

significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The existing policy framework includes Marske within the conurbation. No changes are being proposed through the Local Plan. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village.

Officer response:

The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

The link provided on your website presents residents with an 'impenetrable' list of PDFs without the necessary text or links to make consultation easy or meaningful. Plan is ineffective as it appears to offer safeguards against housing development, such as that proposed at Marske, yet does not prevent the application being considered. Already a number of houses for sale in Marske. New development don't tend to reflect local distinctiveness. Development would exacerbate problems related to car-borne commuting. Is in an area of flood risk and does not support the reclaiming and reusing of derelict land. Does not prioritise sites within the urban area that will enable the development of community facilities. Would not allow people to live closer to their place of work, shops and services. Plan compromises the ability of Marske and East Cleveland to maintain its own distinctive character. Proposal will create very limited employment opportunities for new residents. Plan will not safeguard biodiversity and geodiversity or open areas in and around the town. It will remove a large tract of arable land. Proposal will not protect and enhance Strategic gaps between Marske and New Marske. No linked plan to create access to jobs, healthcare and education in advance of or concurrent with this development. Proposal will create very limited employment opportunities for new residents. Marske is wrongly classified as being in the conurbation which does not reflect the make-up or needs of the area. High density housing in Marske is inappropriate.

Officer response:

We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take

place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Council has prioritised development on the most sustainable sites to meet identified housing needs, whilst ensuring that sites are viable for residential development and have a realistic prospect of being delivered within the plan period. The policy seeks to deliver strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The community facilities are expected be of a neighbourhood scale to meet the day to day needs of the new development and therefore any impact upon Marske District Centre will be limited. Any proposal for retail development over 500m² on the site will be expected to be supported by a retail impact assessment in accordance with Policy ED1, to ensure that the proposals would not have a significant adverse impact upon Marske District Centre. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. The design of the proposals will be considered at the planning application stage. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The site comprises of predominantly Grade 3b land within the Agricultural Land Classification, which is not considered to be the best and most versatile agricultural land. Whilst some of the site is considered to be Grade 3a, it is considered that the loss of these relatively small areas of higher quality agricultural land would be outweighed by the

benefits of the development in helping to meet identified housing needs in a sustainable location. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The existing policy framework includes Marske within the conurbation. No changes are being proposed through the Local Plan. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

No need for more housing. Lots of houses for sale and the population is declining. Deletion of planned school will put extra pressure on existing schools and cause more traffic. There already congestion and the proposals will make this worse. Marske already suffers from flooding and the proposals would make this worse. Northumbrian Water admit they could not deal with more water coming from the site. Further development would ruin the character of the village.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. Comment summary:

No need for this amount of new housing, as there are lots of houses for sale in the area. New development is often designed poorly and does not reflect local character and distinctiveness. Increased congestion. The area is prone to flooding as shown on by the British Geological Survey Groundwater Flood Susceptibility map for the area. Development should be on brownfield sites and not greenfield. The site is not located close to the main employment areas, thus reducing the distances people need to travel. The plan will not safeguard and enhance Marske district centre. The plan would damage the distinctive character of Marske. Housing plan will not help diversify the economy. Housebuilding jobs would be temporary and jobs in proposed hotel, pub/restaurant, drive-through and petrol filling station would be minimal and low paid. The plan would harm biodiversity and geodiversity interests. The proposals would damage the strategic gap between Marske and New Marske. No plan to create new jobs, healthcare or education provision, so existing services will be put at risk. Marske should not be included within the conurbation area. High density housing is not appropriate in Marske. Proposed single carriageway under Marske railway bridge would make congestion worse.

Officer response:

The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required

to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-through restaurant or petrol filling station. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs.

Comment summary:

Object to the proposals. The site is prone to surface water flooding and the proposals would exacerbate this problem. Increased traffic congestion. Increased pressure on local services and infrastructure, including local schools and health centres. There has been insufficient consultation on the proposals. The site is arable land which could be home to wildlife and birdlife. The area has already been over-developed and the development would ruin the character of this traditional North Yorkshire fishing village. Brownfield sites should be prioritised over greenfield sites in accordance with the NPPF and the Council's own draft plan.

Officer response:

In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools

in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. Submission type: E-Mail

Agree with section?: No

Comment summary:

The plan appears to offer safeguards against proposed housing developments threatening Marske, but does not prevent the application being considered. There are lots of properties for sale in the area and no need for more housing. New housing development will harm local distinctiveness. Impact of increased traffic and congestion. The proposals would make flooding in Marske worse. Greenfield sites should be prioritised over brownfield land. Proposals would not be located in conurbation area near to jobs and services, thus reducing the need to travel. The proposals will harm Marske district centre. The proposals would not create jobs. Construction jobs would be temporary and hotel/fast food/restaurant/petrol station jobs would be few and low wages. Plan would harm biodiversity and geodiversity. Proposals would damage the strategic gap. The local population is declining. The area has a weak housing market which would be made worse. The area has a high unemployment rate and the proposals would not address this. Marske should not be included in the conurbation. You state that 'Rural economic development in the Borough will focus particularly on the expansion of the tourism and outdoor leisure industry,.' You fail to make clear how this will quickly create new jobs for the people living in the new housing projected against the build rate. High density housing is inappropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre, enhancing its vitality and viability. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-thru restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The existing policy framework includes Marske within the conurbation. No changes are being proposed through the Local Plan. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

The plan appears to offer safeguards against proposed housing developments threatening Marske, but does not prevent the application being considered. There are lots of properties for sale in the area and no need for more housing. New housing development will harm local distinctiveness. Impact of increased traffic and congestion. The proposals would make flooding in Marske worse. Greenfield sites should be prioritised over brownfield land. Proposals would not be located in conurbation area near to jobs and services, thus reducing the need to travel. The proposals will harm Marske district centre. The proposals would not create jobs. Construction jobs would be temporary and hotel/fast food/restaurant/petrol station jobs would be few and low wages. Plan would harm biodiversity and geodiversity. Proposals would damage the strategic gap. The local population is declining. The area has a weak housing market which would be made worse. The area has a high unemployment rate and the proposals would not address this. Marske should not be included in the conurbation. You state that 'Rural economic development in the Borough will focus particularly on the expansion of the tourism and outdoor leisure industry,.' You fail to make clear how this will quickly create new jobs for the people living in the new housing projected against the build rate. High density housing is inappropriate in Marske.

Officer response:

A landowner is able to make a planning application for development on their land at any point in time and it is the Council's legal duty to assess the merits of that planning application in accordance with the development plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood

Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. The proposals are likely to increase the usage of Marske district centre, enhancing its vitality and viability. The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-thru restaurant or petrol filling station. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The existing policy framework includes Marske within the conurbation. No changes are being proposed through the Local Plan. The policy indicates that the housing element of the site should achieve an indicative overall density of 30 dwellings per hectare. This is not considered to be high density and would be consistent with existing housing densities within Marske.

Comment summary:

As a resident of Marske i am completely against this development,or any other for that matter,on greenfield sites. Your own DPL says there ample brownfield sites so why not use them. As they have had previous buildings there, they probably were not built on flood affected land, something that cannot be said of this proposed area. The only benefit that can be gleaned from this new housing plan is if I were to set up a flood reclamaiton company, perhaps it would be very profitable. There absoluteley no need for any more houses in our village. Go build them in Mr Dunnings back yard, he can have all the problems his council want to dump on us.

Officer response:

The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy.

DLP232**Comment summary:****Officer response:****Full Name:** Mrs Josephine Wilson

I would fully support the content of all the local objections to this plan and would like to add a few more points. The majority of the people of Marske live here to be part of a small town/village community living on the edge of a unique coast and country setting. They do not want to be engulfed by a major building development. We all know that this plan would be the first of a succession of moves for further development to join Marske to Saltburn and to Redcar. This area of Cleveland is unique in its farmland, woodland and coastal areas all of which are vital to wildlife and the sustainability of our town as it is so therefore should remain and be maintained as an asset for local people and visitors to enjoy. As Cleveland's population is reducing by over 3% per year there is a question over whether further housing to this scale is required particularly in light of the comment made on Look North last week 'That the North's assets are being pillaged by groups in the south and other areas to meet their requirements' i.e. Pension Schemes. What do these people care about the local inhabitants of this far away place they have never heard of or are even aware of. It is also a belief that housing developments on this nature devalue existing properties. I have had discussions with many local businesses that may profit from a larger community. They also disagree with this proposed development. I would also add, my household has not received any data the proposes claim to have sent I therefore would like to lodge this objection to the proposed development South of Marske by the Sea.

The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The Council expects developers to carry out a genuine and meaningful consultation with local residents, interest groups and recommended/statutory consultees at an early stage, as set out within the Council's adopted Statement of Community Involvement. However, there is no legal obligation for a developer to undertake pre-application consultation and it can only be encouraged by the Council.

The majority of the people of Marske live here to be part of a small town/village community living on the edge of a unique coast and country setting. They do not want to be engulfed by a major building development. We all know that this plan would be the first of a succession of moves for further development to join Marske to Saltburn and to Redcar. This area of Cleveland is unique in its farmland, woodland and coastal areas all of which are vital to wildlife and the sustainability of our town as it is so therefore should remain and be maintained as an asset for local people and visitors to enjoy. As Cleveland's population is reducing by over 3% per year there is a question over whether further housing to this scale is required particularly in light of the comment made on Look North last week – That the North's assets are being pillaged by groups in the south and other areas to meet their requirements i.e. Pension Schemes. What do these people care about the local inhabitants of this far away place they have never heard of or are even aware of. It is also a belief that housing developments on this nature devalue existing properties. I have had discussions with many local businesses that may profit from a larger community. They also disagree with this proposed development. I would also add, my household has not received any data the proposes claim to have sent. I therefore would like to lodge this objection to the proposed development South of Marske by the Sea.

Officer response:

The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. Whilst it is recognised that the proposals would result in a narrowing of the strategic gap between Marske and New Marske, the policy indicates that a deep planting buffer will be provided towards the A174, which will help to reinforce the strategic gap and retain its integrity. The open spaces between Marske and Saltburn, and Marske and Redcar will continue to be protected as a strategic gap and green wedge respectively under Policy N2. In accordance with Policy N4 of the Local Plan, and other relevant legislation, impacts on biodiversity and geodiversity, including species and habitats, will be considered as part of any planning application to ensure detrimental impacts are avoided. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The potential impact of the Local Plan on property values is not a material planning consideration and therefore cannot be taken into consideration in the preparation of the plan.

Comment summary:

I am writing to object to the proposed development detailed in you Draft local plan. the proposed development at marske Ings farm and windy hill lane are very worrying indeed. I have two children and I worry greatly about the future of their education when you are not proposing to build any school/s. Where are all the children to go? the schools in Marske are already straining with full numbers of children. we have chosen to live in this village precisely because it is a village. I wanted my children to be able to walk to school both primary and secondary! With so many brownfield sites near our area I see no need to build on greenfield land. where will everyone work???? I see no plans for future job creation in his area. The flood risk such a development poses is also a great a worry, we need our greenfield sites they are small enough already! I urge you to reconsider, on behalf of my young family.

Officer response:

Only surplus brownfield land at Errington Primary School has been allocated for housing development on Windy Hill Lane under Policy H3.16. No greenfield sites have been allocated for development on Windy Hill Lane. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. Through good design, it is anticipated that the development can be made to complement the existing settlement. The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean

development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place.

DLP229**Full Name:** Mike Burns**Organisation:****Agent Name:****Agent Organisation:****Submission type:** E-Mail**Agree with section?:** No**Comment summary:**

I believe the DLP is flawed with regards to the housing plan for the area particularly the "creation" of a new community South of Marske. If the development is as you say a "new community" surely it requires to be separate from Marske not joined. The massive infrastructure and social problems this project is likely to create is comprehensible. You say that you wish "to improve the quality of life" in the borough how can this be by introducing unrequired stress and hardship of the people in Marske and the surrounding communities of Marske that use the area, either via travel issues through extended travel times to their chosen place of employment, reducing valuable family time, or social issues such as antisocial behaviour and insecurity for those residents that are intimidated by large/extended communities. This section of the Plan must not be allowed to happen and must be reviewed. A larger effort on behalf of the council be made to inform all of the Borough's communities aware of such huge changes to the Borough's policies as I expect that a good 90% of the residents do not know of the proposed changes.

Officer response:

The policy identifies the site as a strategic development site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The site will therefore contain a number of facilities which residents will require to meet most of their day to day needs. The policy already indicates that contributions will be required, as necessary, at the time of the application towards any services and community infrastructure enhancements required to meet needs arising from the development. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. We have undertaken a 6 week consultation on the draft Local Plan. Throughout the consultation period we held a number of drop-in sessions throughout the Borough, including in Marske, where people could discuss the Plan with Council officers. The consultation and drop-in events were advertised on the Council's website, resident's magazine and notification sent to those on our consultation database. The Council will also hold a 6 week consultation on the Publication draft of the Local Plan. Notification will be sent to those on our consultation database to inform them of the consultation, including anyone who has commented on the draft Local Plan. All of our consultation procedures are set out in the adopted Statement of Community Involvement.

Comment summary:

I have lived in Marske for 65 years and object strongly to the planning application for 1000 houses at Marske Inn Farm along with the proposed hotel, drive-thru and petrol station etc. We have suffered many problems due to the building of more and more houses over the years, not least when we became a dormitory town for ICI and British Steel, these include the increase in flooding which is occurring now in areas where we never experienced this previously and the amount of traffic on our roads. These and other problems will be increased a hundred-fold by the proposed building scheme. Why is the Council taking away our village status? Why do we need more houses when there are empty houses all over the village? Our young people are leaving the area because there is no work for them so who will occupy these houses? Marske has always suffered because of its position between Redcar and Saltburn. Any grants and improvements are always awarded to these two towns and Marske is overlooked. What does the Council do for us apart from removing our greenfield sites and linking us up with other towns? There must be many other areas in the Borough where the proposed building could take place without such a detrimental effect on people who have lived here all their lives.

Officer response:

The policy seeks to deliver a strategic housing site for up to approximately 1,000 dwellings, supporting community facilities, infrastructure and public open space. The Policy does not propose a hotel, pub/restaurant, drive-thru restaurant or petrol filling station. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any

alterations to the existing two-way traffic flow under the railway bridge on the A1085. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The policy already indicates that the development will be expected to be a well-designed and co-ordinated development which successfully integrates land uses within and adjacent to the site and creates a safe and high quality living environment, taking into account the impact of the development on the landscape. The policy will also be amended to make reference to settlement character. The design of the proposals will be considered at the planning application stage.

Comment summary:

Why is another greenfield site being proposed for housing development? Have the council already extended development limits to include greenfield land around Marske? The population of the borough is in decline because there are no jobs. The DLP wants to promote "households with executive aspirations", but without a significant upturn in employment prospects in our region this is an unachievable aspiration. All talk of future jobs is in an aspirational context, with no firm plan and certainly no guarantee that any will be created. So they want to build houses in the hope that jobs will happen "somewhere, somehow". The council/developer have no option other than to use a Sustainable Urban Drainage System (SUDS), as Northumbrian Water (NW) have stated that no surface run-off water can be directed in to existing drains/culverts. The entire area is unsuitable for soil infiltration based SUDS due to the underlying geology, so this means the only solution is the on-site storage of water in huge tanks and then a controlled release, but to where? This is the same technique employed when the storage tanks were installed under The Stray. There have been several spill events this year and there has been a noticeable increase in frequency and duration. This has an associated effect on bathing water quality. Even NW is unable to design or verify the design of such systems to guarantee that the flood risk/run-off situation will not be worse in the future. Increased run-off water, in addition to the immediate areas, flooding will increase across large swathes of Marske, which is already highlighted to be at very high susceptibility to groundwater flooding by the British Geological Survey. The DLP refers to primary school capacity in both Marske and New Marske, and concedes that increased capacity will be required after 2018. The identified preferred option would be to build a new school on-site, but they appear to have ruled this out in favour of a financial contribution to education instead. Regarding secondary school capacity, information presented at the consultation event revealed that the council considers the catchment area to be borough wide. This might imply that future generations of Marske pupils may be expected to travel much further afield for secondary education.

Officer response:

The Council has prioritised the allocation of previously developed land for development. However, as there is an insufficient supply of previously developed land which is suitable or viable for residential development, it has been necessary to allocate some greenfield sites in order to meet identified housing needs. The development limit boundaries are being reviewed as part of the process of updating the Local Plan. The proposed change to development limits around Marske is being consulted on as part of the consultation on the Local Plan. The Council has allocated sufficient sites to meet its objectively assessed housing needs. The housing requirement has been established using a robust evidence base taking account of the Government's latest household projection figures, economic growth forecasts and the Council's desire to achieve population stabilisation, set within the context of an increasing number of households throughout the UK due to more people choosing to live alone, family break-ups and increased life expectancy. The Local Plan seeks to support economic growth and job creation. The plan also seeks to support the key industrial sectors of the port, chemicals, steel, and recycling industries whilst recognising the need to diversify the economy so that it is more resilient to change in the future. The plan also puts policies in place to support small and medium sized business as well as the tourism industry which has the potential for significant growth building upon the natural assets of the borough. House building is also a key economic sector, with housing development and economic growth intrinsically linked. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category "A", which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. The site layout will be expected to direct development away from the areas most at risk and appropriate mitigation measures will be required to reduce all forms of flood risk across the site. A Flood Risk Assessment will be required at the planning application stage and this will need to show that not only can flood risk be mitigated on site (from surface water and groundwater flooding) but that flood risk will not increase the surface water or groundwater flood risk elsewhere. To achieve this, any existing flow paths will need to be maintained. The site is greenfield so sustainable urban drainage systems (SUDS) will need to be used to

ensure runoff does not increase. Also any subterranean development would need to be resilient to groundwater flooding, and not disrupt existing groundwater flow paths. Opportunities to improve flood risk in this area of Marske will be sought where possible. The policy already recognises the drainage issues on the site and indicates that these must be resolved to enable the development to take place. The policy has identified that there will need to be a resolution of water supply, sewerage and drainage requirements including off-site infrastructure enhancements to allow the site to come forward for development. The Council will closely liaise with Northumbrian Water to ensure that the proposals are acceptable and would not result in an unacceptable impact upon water quality. The primary school projections show that there will be sufficient surplus capacity within the existing primary schools in Marske and New Marske to accommodate the demand for additional places over at least the short to medium term. The policy also indicates that provision of a new primary school can be achieved on the site to meet longer term needs. It is understood that Bydales School will have sufficient surplus capacity to accommodate the increased demand for secondary school places throughout the course of the development.

Comment summary:

We are writing to object to any further development at Marske. In the forty years we have lived here Marske has slowly grown because of re-development over this time. This has brought more traffic through the village in spite of the by-pass, any new developments will cause more congestion on roads in and out of Marske. Because of the recent flooding and the fact that the drains/culverts were unable to cope with the excess water, any further developments will only increase the problem of the flooding in the Marske area. Any further development around Marske is going to take away greenfield sites and we will lose the character of Marske as a village.

Officer response:

This site was chosen due to its sustainable location alongside the Saltburn to Darlington railway line, with access to two railway stations, and its relatively close proximity to services and facilities, which minimises the need to travel and the distance travelled. A Transport Assessment has been undertaken as part of the planning process to consider the potential impact of the development upon the road network. The impacts identified are considered to be acceptable, subject to some access and junction improvements. Furthermore, the Highways Agency have not raised any objections to the proposals with regard to their impact upon the Strategic Road Network. Policy TA2 includes the requirement for any development proposals to be supported by a Travel Plan, to consider and include measures to encourage the use of sustainable modes of transport. A new pedestrian access will be provided between the development and the existing settlement. The Council does not support any alterations to the existing two-way traffic flow under the railway bridge on the A1085. The site lies within Flood Zone 1 of the Environment Agency's Flood Zone Maps, which indicates that the site is at low risk from flooding from main rivers or the sea. In terms of surface water flooding, small areas of the site are at risk, particularly the westernmost part, as shown on the Areas Susceptible to Surface Water Flooding Maps. As for groundwater flooding, the British Geological Survey has produced maps which show the areas that are susceptible to groundwater flooding. These maps show where there is the potential for groundwater flooding on this site. The maps identify four categories of susceptibility. Marske is identified in category 'A', which means there is potential for groundwater flooding to occur at the surface, based on rock type and the estimated groundwater level during periods of extended intense rainfall. However, this does not mean that groundwater flooding will take place as the maps do not contain information on how often flooding is likely to occur (the probability or return period) or to what depth, but just that the physical setting is such that it could occur. Comment summary:

Where was our invitation leaflet to attend a consultation in October? We back directly onto the proposed development site yet we did not know anything about this latest consultation. I feel extremely aggrieved that our house (and presumably those in the neighbourhood) were excluded. I can only assume that there was a hidden agenda here as we will be the most affected if the development goes ahead. Presumably the need for more money going to the council supersedes any feelings of residents. Extra traffic and resulting congestion in our village - but surely we will no longer be able to call it a village with the resulting urban sprawl. Our schools are, as I understand, already filled to almost capacity. Where are the incoming and future children supposed to go to school? And if they do go to our existing schools should these be extended the traffic around school times would be even worse than it is now. What is this about a hotel and drive through take-away? Do you really think that the inclusion of these makes the prospect any more palatable? The most important objection I have is the risk of flooding. Several houses on our road were flooded in September and were unable to get any compensation because the insurers knew that the houses were on a flood plain. The SUDS proposed will definitely not compensate for the potential amount of flooding, and will surely have a knock-on effect elsewhere in the area. But of course the developers do not care about what happens when they have left. Do you?
